<b>Total, including others.</b>	<b>6,174</b>	<b>4,959</b>	<b>9,929</b>	<b>10,796</b>

It was announced during the year that the International Railways of Central America had projected a line to run southeasterly from Santa Maria to Santa Ana in Salvador. The completion of this and other lines in Central America, projected or under construction, would afford a direct through route between Vera Cruz, Mexico, and Panama and Colon, extending along the western portion of Central America through Guatemala, Salvador, Honduras, Nicaragua, and Costa Rica.

The length of railway in operation is reported at 425 kilometers (264 miles), all of narrow gauge. Telegraph offices, 215, with 3881 kilometers (2412 miles) of line. Post offices, 139.

**FINANCE.** The standard of value is silver. The silver peso was worth about 42.2 cents in 1913, 36.5 in 1914, and 35.4 in 1915. In 1914, revenue was 12,423,753 pesos, and expenditures 15,085,219 pesos. The larger receipts were: import duties, 6,076,770 pesos; export duties, 1,811,918; liquor excise, 2,747,271; stamps, 367,119. The larger disbursements in 1914: for the public debt, 3,773,596 pesos; war and marine, 3,310,021; interior, 2,355,393; fomento, 1,912,107; public instruction, 957,195; finance, 791,037. For the fiscal year 1916, estimated revenue and expenditure were 12,064,900 and 12,373,503 pesos respectively. The public debt, as reported for Dec. 31, 1915, was 27,560,288 pesos.

**GOVERNMENT.** The executive power is vested in a president, who, with a vice-president, is elected by direct vote for four years. The legislative power is exercised by a single chamber, the National Assembly, consisting of 42 deputies (3 for each of the 14 departments), elected annually by direct vote. The franchise is obligatory upon male citizens over 18 years of age. President in 1916, Carlos Meléndez, who was inaugurated March 1, 1915; Vice-President, Alfonso Quiñónez Molina. The President is assisted by a cabinet of four members, whom he appoints and who are responsible to the National Assembly. Each of the departments is administered by a governor, appointed by the President for four years.

**SALVATION ARMY.** There were in the United States and its possessions for the year ending Sept. 30, 1916, 967 corps and outposts, 3225 officers and cadets, 53,483 converts, 200,678 indoor meetings with an indoor attendance of 7,988,051; 154,728 open-air meetings with an open-air attendance of 18,362,992; 2423 life-saving scouts meetings with a life-saving scouts attendance of 34,478, and a company attendance of 1,310,039. In 1916, there were 4,250,568 copies of the *War Cry* published. There were 89 hotels and boarding houses, with accommodation for 6994; 1,875,642 beds supplied; 455,792 meals sup-

plied; 1254 indoor meetings with an attendance of 57,491. There were 121 industrial homes, which supplied 2,890,071 meals; 14 slum posts and nurseries; 25 rescue homes and maternity hospitals, 2169 girls admitted, 2137 girls passed out, 1,092,900 meals supplied, and 359,776 beds supplied. In the prison work there were 46,874 prisoners prayed with and advised, 3254 assisted on discharge, 283 situations found, and 11,601 converts. In 1915 there were 327,204 Christmas dinners, 888,335 persons afforded temporary relief outside of the Salvation Army industrial homes and hotels, 86,345 men for whom employment was found outside Salvation Army institutions, and 27,339 women for whom employment was found outside Salvation Army institutions.

There were in the world in December, 1915, 62 countries and colonies occupied, 41 languages in which Salvation was preached, 9635 corps and outposts, 1219 social institutions, 647 day schools, 19 military and naval homes, 17,288 officers and cadets (including social), 64,527 local officers, and 28,623 bandmen.

**SALVINI, TOMMASO.** An Italian actor, regarded by many as the greatest actor of modern times, died in Florence Jan. 1, 1916. He was born just 87 years before that date, in Milan. His father was a professor of literature at Livourne, and supervised his son's education. By the age of 14, Tommaso Salvini had given such promise of histrionic ability that the famous Gustavo Modena took him into his company and personally trained him. Before long he had become a member of the royal company at Naples, where he attracted the attention of the managers of Adelaide Ristori. This led to an engagement of several years, during which he took leading parts in support of the great Italian actress, who became his friend and champion. Afterward he spent some time in study, to prepare himself for a career in the highest realms of drama, and before again returning to the stage he participated in the Italian War of Independence, acquitting himself with distinction. In 1849 his performance of *Oedipus*, in an Italian version, at once placed him in the front rank of his profession, and this success was followed by a triumph in Alfieri's *Saul*, and by further notable achievements as *Egipto*, in Alfieri's *Merope*; Paolo, in *Francesca da Rimini*; Orasmane, in Voltaire's *Zaire*; Romeo, Hamlet, Ingomar, Samson, etc. In 1871 he visited South America and in 1873 England and the United States, being received everywhere with acclamation by the public, and by most critics. In New York he made a tremendous impression with his *Othello*, in which his tragic powers had the widest scope. His interpretation of the final scene, the murder of Desdemona, was so full of horror that it was condemned by some for brutality. "The popular verdict, however," says the critic of the New York *Evening Post*, "was that no such *Othello* had been seen before or was likely to be seen again. Most assuredly there has not yet been another comparable with it in tragic power. No player was ever richer in physical attributes. His stature was majestic, his voice wonderful in its range, sonority, and sweetness, his features were noble and extraordinarily mobile—not plastic, indeed, in the same sense as is the mask of Novelli—but instantaneously responsive to every change of emotion, and equally capable of illustrating the light play

of some passing fancy or giving the most vivid expression to the direct passions. His control of his resources was absolute, and in what seemed to be the wildest moments of emotional abandonment, his acting was ever free from the slightest suspicion of strain or rant. Moreover, he was supported by a company of the rarest excellence, headed by Signora Piamonti, herself a great actress worthy of her association, and scarcely dimmed by it. Nobody ever really saw Salvini act Othello except when Piamonti was his Desdemona."

Othello, then, was probably the most startling impersonation that Salvini ever achieved, but, unlike many actors of lesser genius, he was unwilling to allow his range to be narrowed by popular success in one department of the drama. In the opinion of the critic already quoted, Salvini's impersonation of the convict Conrad in *La Morte Civile* was his masterpiece, "the most delicate and subtle of all his impersonations and the one most completely independent of those physical gifts which lent a special glamour to all his heroic parts." In this play he compelled critical and popular admiration alike. Other tragic dramas in which he appeared in the United States were *King Lear*, *Macbeth*, *Hamlet* (in which he is said to have failed to appreciate the psychological subtlety that has been realized by the greatest interpreters of this part), *Saul*, *Samson*, and *Sauret's Gladiateur*.

Of his Saul, William Winter, in his *Shadows of the Stage*, says: "Salvini was grander and finer in King Saul than in any other embodiment that he presented. He seized the idea wholly, and he executed it with affluent power. He brought to the part every attribute necessary to its grandeur of form and its afflicting sympathy of spirit. His towering physique presented, with impressive accuracy, the Hebrew monarch, chosen of God, who was 'lifted a head and shoulders above the people.' His tremulous sensibility, his knowledge of suffering, his skill in depicting it, his great resources of voice, his vigor and fineness of action, his exceptional commingling of largeness and gentleness—all these attributes combined in that performance to give magnificent reality to one of the most sublime conceptions in literature. By his personation of Saul, Salvini added a new and an immortal figure to the stage pantheon of kings and heroes."

The most remarkable evidence of his many-sided genius was his ability to turn from tragedy of the most appalling sort to a comedy such as *David Garrick* or *Ingomar*, in both of which he had great success. The fact that his acting was done in Italian before an American audience, which yet seemed to lose nothing though the language was not understood, is a unique tribute to his power. In 1886 he and Booth played together in *Othello*, Booth playing Iago. Salvini at times also played Iago instead of the title rôle. He made several visits to the United States, and continued, afterward, to act in Italy, but his virtual retirement came in 1890. However, in 1902 he took part in the celebration of Ristori's eightieth birthday, and at the ceremonies following her death in 1906 delivered an oration. The Italian people had planned a celebration of Salvini's eightieth birthday, but the terrible earthquake at Messina, which directed all public efforts toward relief, interfered. In English was published *Leaves from the Autobiography of Tommaso Salvini* (1893).

**SALZBURG.** A crownland of Austria. The area is 2762 square miles; population in 1910, 214,737.

**SAMOA.** See GERMAN SAMOA.

**SAMOS.** An Anatolian island; a principality tributary to the Porte previous to November, 1912; covering an area of 468 square kilometers (181 square miles) and having a population of 53,424 in 1902, besides 15,000 natives of Samos residing on the Anatolian shore. The capital is Vathy, with about 8000 inhabitants. Upon the assassination of Kopassis Effendi in March, 1912, Turkey sent Begleris Bey to administer the country as prime-governor. In November, 1912, the island was occupied by Greek troops, and since that date has been administered by a Greek governor.

**SANSKRIT.** See PHILOLOGY, MODERN.

**SANT, JAMES.** An English portrait, figure, and landscape painter, died in London, July 12, 1916. He lived to a great age, having been born at Croydon in 1820. A pupil of John Varley and of Sir Augustus Callcott, he also studied for four years in the Royal Academy schools. He was elected to the Royal Academy in 1870, and remained a member till his resignation in 1914. Queen Victoria chose him as her principal painter-in-ordinary in 1871; for her he painted many members of the royal family. In 1861 a collection of his work, made for the Countess Waldegrave, was exhibited at the French Gallery, and he was a frequent exhibitor at the Royal Gallery. Besides portraits and landscapes, he devoted himself to such subjects as: "Dick Whittington," "Little Red Riding Hood," "The Boy Shakespeare," "The Young Minstrel," and various pictures of religious trend, among which the most noted were "The Infant Samuel" and "The Soul's Awakening." It is said that till he was 95 he devoted several hours daily to professional work. In 1913 he was created C.V.O.

**SANTO DOMINGO.** The name of the capital of the Dominican Republic (q.v.), for which it is also sometimes used.

**SÃO THOMÉ AND PRINCÍPE.** A Portuguese island colony off the coast of French Equatorial Africa. The total area is 939 square kilometers (374 square miles) and the population was estimated in 1909 at 68,221. The colony is an important producer of cacao.

**SARAWAK.** A British protectorate covering about 42,000 square miles in the northwestern part of the island of Borneo, with an estimated population of 500,000. Capital, Kuching (25,000 inhabitants).

**SARGENT, JOHN SINGER.** See PAINTING AND SCULPTURE, *passim*.

**SARRAIL, MAURICE.** See WAR OF THE NATIONS.

**SASKATCHEWAN.** One of the Northwest Provinces of the Dominion of Canada, east of Alberta and west of Manitoba. The capital is Regina. Area, 251,700, of which 8318 water. Between 1901 and 1911 the population increased 439.48 per cent, or from 91,279 to 492,432; both the numerical increase and the increase per cent were greater than in any other Canadian province, and subsequent to the 1911 census the population continued to advance rapidly. The estimated population of Regina in 1915 was 50,000; Saskatoon, 25,000; Moosejaw, 24,000. These figures are far above the census returns of 1911, Regina having at that time 30,213 inhabitants; Moosejaw, 13,823; Saskatoon, 12,004; Prince Albert, 6254; Yorkton, 2309; Weyburn, 2210; North Battleford, 2105; Estevan, 1981; Swift Current, 1852. Of the population 10 years of age and over in 1911, males numbered 228,364 (62.11 per cent) and females 139,322 (37.89); of these, 195,247 males and 13,275 females were reported as employed in gainful occupations. Of the males employed, 67.3 per cent were in agriculture (the highest percentage for agriculture except in Prince Edward Island), 7.3 in building trades, 7.2 in transportation, and 7 in trade and merchandising; of the females, 53.6 per cent were in domestic and personal service, 18 professional, and 7.4 in trade and merchandising.

The provincial government is administered by a lieutenant-governor, appointed by the Governor-General of the Dominion; he acts through an executive council, or responsible ministry. The Legislative Assembly consists of one chamber of 54 members elected by direct vote for five years. In the 12th Parliament, which convened in 1911, Saskatchewan was represented by 4 Senators and 10 members of the House of Commons; the representation in the Commons on the basis of the 1911 census is 16. The Lieutenant-Governor in 1916 was Hon. R. D. Lake.

**SASLAVSKY QUARTET.** See MUSIC, *Chamber Music*.

**SATURN.** See ASTRONOMY.

**SAULT STE. MARIE CANALS.** See CANALS.

**SAVINGS BANKS.** There are two classes of commercial savings banks in the United States, mutual and stock. The former are found almost exclusively in New England and Eastern States, while the latter are found through the Middle West and the South. On June 30, 1916, according to the Comptroller of the Currency, there were 1864 mutual and stock savings banks, exclusive of the stock saving banks in the 10 States enumerated in the article STATE BANKS (q.v.). Their aggregate resources exceeded \$5,500,000,000 and they had more than 10,000,000 depositors. The mutual institutions numbered 622. They had resources amounting to \$4,548,000,000, including loans and discounts of \$2,221,000,000 and investments of \$1,999,000,000. Their deposits were \$4,187,000,000; and their combined surplus and undivided profits, \$354,680,000. There were 1242 stock savings banks with resources of \$1,033,000,000 and deposits of \$901,610,000.

**POSTAL SAVINGS BANKS.** The United States Postal Savings System was established in 1911. Any person at least 10 years of age may

open a postal savings account; no person may have more than one account; the accounts of married women are free from interference by their husbands; and post office employees may not disclose the amounts of deposits. By a special act of May 18, 1916, the amount that any person may deposit was raised from \$100 to \$1000, exclusive of accumulated interest; but a person may deposit as much as an additional \$1000 but will receive no interest on deposits above the first \$1000. Deposits bear interest at the rate of 2 per cent a year, interest beginning on the first day of the month following that in which a certificate is issued and becoming due one year later; no interest is paid for less than a full year. A depositor may exchange deposits for registered or coupon United States postal savings bonds, bearing interest at 2½ per cent, in denominations of \$20, \$100, and \$500. The act of May 18th also provided that postal savings funds may be deposited by the postal authorities in qualified banks, national or State, whether members of the Federal Reserve system or not; the Federal Reserve Act had required such deposits to be made in member banks only. Such deposits bear interest of not less than 2¼ per cent; but 5 per cent of the postal savings funds must be kept with the Treasurer of the United States as a reserve. The funds received in any community must be given to member banks of the reserve system. If no local bank is qualified then the funds must be deposited in the bank most convenient to that locality. The original act authorized the trustees to invest not more than 30 per cent of the postal savings deposits in bonds or other securities of the United States; the act of May 18th annulled this and provided that if the deposits in any State exceed the amount which qualified banks therein are willing to receive, and if the 5 per cent reserve fund is fully paid in, all or any part of this excess may be invested in postal or other securities of the United States.

In the fiscal year ending June 30, 1916, there were 8421 depositories in operation. Deposits increased during the fiscal year from \$65,684,000 to \$86,019,000, or 31 per cent, and at the close of 1916 were increasing about \$1,000,000 per week. The number of depositors increased from 525,000 to 602,937, or 14.8 per cent. States showing more than \$1,000,000 of deposits, with the number of their depositors on June 30, 1916, were as follows: California, 24,224, \$3,835,000; Colorado, 9917, \$1,652,000; Connecticut, 15,067, \$1,933,000; Illinois, 35,979, \$5,991,000; Indiana, 9351, \$1,377,000; Massachusetts, 31,558, \$3,995,000; Michigan, 19,455, \$3,200,000; Minnesota, 11,852, \$1,951,000; Missouri, 14,177, \$2,136,000; Montana, 6389, \$1,306,000; New Jersey, 22,762, \$2,806,000; New York, 211,007, \$27,607,000; Ohio, 34,834, \$5,476,000; Oregon, 10,472, \$1,557,000; Pennsylvania, 45,579, \$7,107,000; Washington, 12,963, \$2,119,000; and Wisconsin, 10,843, \$1,811,000. By December 1st the total number of depositors had increased to 660,000 and deposits to \$108,500,000. There were 5634 banks qualified to receive postal deposits. The amount of postal savings bonds issued to depositors during the year was \$1,694,280 in registered form and \$150,420 in coupon bonds; these made the total then outstanding \$9,151,800. In addition the postal savings trustees purchased \$604,460 of such bonds during the year, making their total

holdings \$1,558,500. That the system is self-supporting is shown by the fact that there was paid into the treasury of the United States during the fiscal year 1916 \$2,132,912. During the year the system was extended to eight post offices in Alaska. Moreover, a special effort was made to reach the foreign-born population of the country by the issue of circulars in the mother tongues of about 95 per cent of this population.

**SAXONY.** A European kingdom, one of the more important constituent states of the German Empire. The capital is Dresden. Also, a province of Prussia. See GERMANY, *Area and Population*.

**SBARRETTI, DONATUS, CARDINAL.** See ROMAN CATHOLIC CHURCH.

**SBRIGLIA, GIOVANNI.** An Italian opera singer and teacher, died in Paris Feb 20, 1916. He was born in Naples in 1840, studied there at the Conservatory, at 21 made his début, and afterward for some years took tenor rôles in opera, not only in Italy, but also in Paris and in the United States, where he sang with Adelina Patti. Later he established himself in Paris as a teacher of singing. Among pupils of his who became famous were Nordica, Plançon, and Edouard and Jean de Reszke.

**SCABIES IN CATTLE AND SHEEP.** See VETERINARY MEDICINE.

**SCANDINAVIAN LITERATURE.** One of the noteworthy features in the Scandinavian literature of this year is the keen interest in the war. The battle field has been a favorite scene for stories; the political aspects of the war and the question whether, in general, war is defensible have been dealt with frequently both in books and in periodical literature.

**DANISH. Drama.**—Einar Christiansen's *Møders Venner (Mother's Friends)* was well received. Its chief merit, however, was in the fidelity of its local color. In *Viljen (Will)* Olga Off aims to represent the will as the important factor in life. Carl Gan's *Lazarus*, a one act comedy, pictures the unsuccessful attempt of a poor author to borrow some money from an old friend and schoolmate who has become prosperous.

**Fiction.** Jeppe Aakjær's *Hjørter der er gørende Kræfter (Where There Are Seething Powers)* shows the saving influence of woman in directing the "seething powers" of man away from the lower toward the higher aims of life. The thesis of Henrik Pontoppidan's *Enslens Død (Enslens Death)*, the fourth story of the series beginning with *Torben and Jytte*, is that each generation must gain its liberties anew. Jakob Knudsen's *Den Gang (That Time)* is realistic and convincing. Of late years several of the younger Icelandic authors have written their books in Danish instead of their mother tongue. One of these is Gunnar Gunnarson, whose book *Smaa Historier (Little Stories)* is teeming with Icelandic life and atmosphere. A notable event was the completion of the English translation (by Jessie Muir) of Martin Nexö's great work *Pelle the Conqueror*. The fourth and last volume is entitled *Daybreak*.

**Miscellany.** Owing to the nearness of Denmark to the battle fields, the interest in the war in that country is more acute than in Sweden or Norway, a fact which is reflected in its literature. Two works on the war deserve special notice. In *Verdenskrigen (The World War)* Georg Brandes arraigns the entire system of Eu-

ropean politics and diplomacy. His treatment of the conflict is not that of the indifferent spectator, but rather of the impartial judge. The other work is Vald. Ammundsen's *Krig og Krigsførende Kristne (War and War-Waging Christians)*.

**NORWEGIAN. Drama.** Johan Bojer's *Sigurd Braa* is the story of a man who is encouraged by his dying wife in his resolve to go to prison for the sake of the men working under him. It is partly a social drama, partly a eulogy on the power of love.

**Poetry.** Norwegian poetry has retained the old Danish characteristics much more persistently than Norwegian prose. Vocabulary and forms are Norwegian, but the rhythm is nearly always Danish, and in general we may notice Danish influence, or other foreign influence coming through the Danish. An attempt to approach more closely to the living Norwegian language is made by Alf Larsen in his book *Indgangen (The Entrance)*, which includes the collection *Vinterlandet (The Winter Country)* published two years before under the pseudonym Ingebrekt. The theme running through all of the poems is life's lack of meaning. Einar Solstad made his début with his *Digte (Poems)*, which prove him a poet of nature. In his descriptions of flowers Solstad is surpassed only by Olaf Bull. In Arnulf Overland's *Advent*, the most powerful poem is "Norge" ("Norway"). Kristofer Uppdal's *Snörim (Snow Verses)* deserve particular praise for getting away from the Danish character usually found in Landsmaal poetry.

**Fiction.** In Gabriel Scott's *Jernbyrden (The Iron Burden)* we read the story of a man who moves into a strange place, is looked upon at first as a danger to the community, but later receives the unlimited confidence of the people. Barbra Ring's *För Kulden kommer (Before It Gets Cold)* surpasses the author's previous works. It depicts the life of a woman from her early and ill-advised marriage through her subsequent downward career to her decision to commit suicide. Kristian Elster's *Ilden (The Fire)* shows an advance in form. The fire from which the book takes its name profoundly influences the character and destiny of the two children whose father it ruined. Knut Hamsun's *Segelfoss by (The Village of Segelfoss)* is a sequel of last year's *Children of the Times*. In *Fabler og hændelser (Fables and Events)* Trygve Andersen gives a very faithful and well-rounded picture of Norwegian life of former times.

**Science, Literature, etc.** Gerhard Gran's *Norsk aandsliv i hundrede aar (A Century of Norwegian Culture)* shows the author's power to distinguish the large essentials and to make them stand out clearly. Hans E. Kinck's *Historien om Niccolò Machiavelli (The Story of Niccolò Machiavelli)* shows an unusual understanding of the nature and thought of the Italian people. Arnold Ræstad's *Krigs og fredsproblemer (Problems of War and Peace)* is a very practical work. The author realizes that the problems of war and peace are intricate and complex as life itself.

**Swedish. Poetry.** Verner von Heidenstam (q.v.), who in 1916 was awarded the Nobel prize for literature, issued *Nya dikter (New Poems)*. The volume includes some of Heidenstam's earlier poetry. Throughout the book the idealistic tendency characteristic of the author is revealed, and several of the poems remind one of Viktor Ryd-

berg. In Gustaf Ullman's *Ur livets visor (From the Songs of Life)* we see an underlying faith in life gleaming through the soft melancholy which permeates the poems. Matts Magni Granström's *Hat och kärlek (Hate and Love)* shows the influence of Runeberg. Here, as usually in his poetry, Granström touches on the relation between the outer and the inner, the objective and the subjective. Other productions worthy of mention are Bertil Malmberg's *Atlantis* and Pär Lagerkvist's *Angest (Dread)*.

**Fiction.** The characters in Henning Berger's *Gulaochbaronerna (The Nouveaux Riches)* are inhabitants of Copenhagen who through war speculations have risen from poverty to immense wealth. In *Eldens återaken (The Reflection of the Fire)* Sigfrid Siwertz shows the varied effects of the war on a group of his countrymen. In Gustaf Hellström's new novel, *Bengt Blanck's sentimentala resa (Bengt Blanc's Sentimental Journey)* one of the problems touched on is the influence of a woman's false step on her later life. Elin Wägner's *Släkten Jerneploogs framgång (The Success of the Jerneploog Family)* is a portrayal of political and social conflicts, seen through the eyes of a woman. To his series of parsonage stories K. G. Ossian-Nilsson added *Prästens barn (The Pastor's Children)*. Among collections of short stories may be mentioned Hanna Söderlund-Hammar's *Lyckta dörrar (Locked Doors)*, depicting contemporary peasant life, and Karl Ostman's *Hunger (Hunger)*, portraying the life of the workers in the sawing mills of Northern Sweden. In 1916 Selma Lagerlöf's *The Emperor of Portugallia* appeared in an English translation by Velma Swanston Howard.

**Science, Literature, etc.** Fredrik Lagerroth's *Frihetstidens författning (The Constitution of the Period of Freedom)* is a study in the history of the Swedish constitution. Svante Arrhenius added to his books on astronomy *Stjärnornas öden (The Destinies of the Stars)*, in which he advances some new theories. Henrik Schück's *Shakespeare och hans tid (Shakespeare and His Time)* is an important contribution to Shakespeare criticism.

**SCANDINAVIAN PHILOLOGY.** See PHIL-  
OLOGY, MODERN.

**SCANNELL, RICHARD.** An American Roman Catholic bishop, died in Omaha, Neb., Jan. 8, 1916. He was born in County Cork, Ireland, in 1845, and after a college education at Midleton, Cork, and theological training at All Hallows College, he was ordained priest in 1871. Upon coming to the United States, he was given a pastorate in East Nashville, and from 1880 to 1883 was rector of Nashville Cathedral and administrator of the diocese. In 1887 he was consecrated first bishop of Concordia, Kan., and in 1891 was transferred to Omaha.

**SCENIC HIGHWAYS.** See ROADS AND  
PAVEMENTS.

**SCHMITZ, BRUNO.** A German architect, died in Berlin April 27, 1916. Born in 1858 at Düsseldorf, where he studied in the Academy, he lived, from the age of 28, for the most part in Berlin. In 1906 he was appointed professor by the Technical School at Dresden, and the same institution gave him an honorary degree of doctor of engineering in 1905. As early as 1881 he won first prize in the competition for the Victor Emmanuel monument to be erected in Rome, and for the national monument to Kaiser William I,

for Berlin. He became best known for the great "Battle of the Nations" monument at Leipzig, but many other monuments, as well as buildings, were erected from his designs in various parts of Germany and elsewhere. Among these were: a music hall in Zurich, the Kaiserin Auguste monument at Coblenz, the rose garden and Friedrichplatz at Mannheim, and, in the United States, the Soldiers' and Sailors' monument in Indianapolis and the German pavilion at the St. Louis Exposition. At the time of his death he was regarded as one of the leaders, probably the most distinguished, of his profession in Germany.

**SCOTT-MONCRIEFF, SIR COLIN CAMPBELL.** A British engineer, died in London April 6, 1916. He was born in Scotland in 1836, and after training at the Military College, Addiscombe, went to India in 1856 as second lieutenant in the Bengal Engineers. He gained a reputation for achievement in the irrigation department of the Northwest Provinces, and as chief engineer of Burmah, before retiring from the Indian service in 1883 with the rank of colonel. In the latter year he went to Egypt to take charge of the irrigation department; there he spent nine years, as under-secretary in the public works department at Cairo, and during this period supervised a great undertaking—the restoration of the Nile Barrage, which was to make possible the irrigation of the country. In 1892, having been made K.C.M.G. several years before for his services, he returned to London, and became Under Secretary for Scotland. This post he held till 1902. From 1901 to 1903 Scott-Moncrieff was president of the Indian Irrigation Commission; at the end of this time he was made K.C.S.I. Edinburgh gave him the degree of LL.D. His one book was *Irrigation in Southern Europe*, published in 1868.

**SCULPTURE.** See PAINTING AND SCUL-  
PTURE.

**SEABURY, WILLIAM JONES.** An American Protestant Episcopal clergyman and theologian, died at East Hampton, L. I., Aug. 30, 1916. His father, grandfather, great-grandfather, and great-great-grandfather were all clergymen, among them being Bishop Samuel Seabury, the first Episcopal bishop in America. He was born in 1837 in New York, graduated from Columbia in 1856, and two years later was admitted to the bar. He did not practice long, however, but entered the General Theological Seminary, graduating in 1866. Two years later he succeeded his father as rector of the Church of the Annunciation in New York and there he remained for 30 years. During most of this time, from 1873, he also served as professor of ecclesiastical

polity and law in the General Theological Seminary. This post he retained till his death. Dr. Seabury received doctor's degrees from Hobart College and the General Theological Seminary. He was the author of *Notes on the Constitution of 1901* (of his Church) (1902) and *Memoir of Bishop Seabury* (1908).

**SEALS.** See ALASKA.

**SEARCH LIGHT.** See ELECTRIC LIGHTING.

**SEARS, LORENZO.** An American English scholar, died in Providence, R. I., Feb. 29, 1916. He was born at Searsville, Mass., in 1838, and after graduating from Yale (1861) and from the General Theological Seminary (1864), he took orders and was a rector in New England till 1885. From that year to 1888 he was at the University of Vermont as professor of rhetoric and English literature. In 1890-95 he held the chair of rhetoric at Brown, and thereafter till 1906 that of American literature. Professor Sears published, among other works: *The History of Oratory* (1896); *The Occasional Address* (1897); *American Literature in the Colonial and National Periods* (1902); *The Makers of American Literature* (1904); *Wendell Phillips* (1909); *John Hancock* (1912); *John Hay* (1914).

**SEGUR, PIERRE MARIE MAURICE HENRI, MARQUIS DE.** A French historian, died at his château near Poissy, Aug. 13, 1916. He was born at Paris in 1853, was educated at the College of Stanislas in that city, and entered the public service in 1876 as auditor to the privy council. He soon renounced an administrative career and devoted himself to French history and literature. His works were several times honored by the French Academy, of which he was made a member in 1907. He wrote: *Le Maréchal de Ségur* (1895), a tribute to an ancestor; *Le Royaume de la rue Saint-Honoré* (1897), *La Dernière des Condé* (1899), and *Julie de Lespinaasse* (1905), three volumes on French society in the eighteenth century; *La Jeunesse du Maréchal de Luxembourg* (1900), *Le Maréchal de Luxembourg et le Prince d'Orange* (1902), and *Le Tapisserie de Notre-Dame* (1903), three studies of the seventeenth century. *Louis XVI et Turgot* (1910) and *Louis XVI et Necker* (1913) are histories of the early part of the reign of Louis XVI. De Ségur also published several volumes containing articles and discourses, including *Gens d'autrefois* (1903); *Esquisses et Récits* (1908); *Silhouettes historiques* (1911); and *Parmi les cyprès et les lauriers* (1912).

**SEISMOLOGY.** See EARTHQUAKES.

**SELANGOR.** A state of the Federated Malay States (q.v.).

**SELECTION.** See ZOÖLOGY, *Selection*.

**SELIGMAN, JAMES.** An American banker, died Aug. 26, 1916, at his summer home in Long Branch, N. J. One of eight brothers, all of whom eventually became bankers, he was born in 1824 at Baidersdorf, Germany. As a young boy he learned the weaver's trade, and at 15 he was sent out with a brother to try his fortune in America. They joined another brother in Pennsylvania, and James was successively a carpenter, peddler of jewelry, and peddler of drygoods. The brothers opened drygoods stores in the South and later in St. Louis, Watertown, N. Y., and New York City. During the Civil War they received contracts from the government to supply uniforms, and this gave them

their first big success. Afterward the brothers became bankers, under the name of J. and W. Seligman and Company, and several of them left New York to open branches in London, Paris, Frankfort, and San Francisco. James Seligman remained identified with the New York house, of which he was senior member. At the time of his death he was the oldest member of the New York Stock Exchange, which he joined in 1869, after holding membership in the old Gold Board. For 15 years he served on the governing committee of the exchange. He was also one of the founders of the most noted New York synagogue, the Temple Emanu-El, and for many years was president of the congregation.

**SEMBRICH, MARCELLA.** See MUSIC, *Artists, Vocalists*.

**SENEGAL.** One of the colonies composing the government-general of French West Africa (q.v.).

**SERBIA.** One of the Balkan states; a constitutional European monarchy, hereditary in the male line of the house of Karageorgevich. Until 1878 an autonomous Turkish dependency. Capital, Belgrade. Serbia was a member of the alliance against Germany and lost her entity in the struggle.

**AREA AND POPULATION.** By the terms of the treaty of Buchareat, Serbia gained as the result of the wars in the Balkans the eastern part of Novibazar, Kossovo, and Central Macedonia. The area of the country is given as 48,303 square kilometers (18,650 square miles), and the population (census of Dec. 31, 1910), as 2,911,701. Total area with conquered territory, 33,891 square miles, 4,547,992 inhabitants.

Marriages, 1912, 13,289 (30,453 in 1911); births, 114,257 (107,229); deaths, 63,358 (64,415). Population of Belgrade (1910), 89,876; Nish, 24,949; Kraguyevats, 18,386; Lescovats, 14,266; Pozharevats, 13,613; Shabats, 11,541; Pirot, 10,737; Vranja, 10,487. In the new territories are Bitolj (Monastir), 59,856; Usküb, 47,384; Prilip (Perlepe), 21,783; Prizren, 21,244; Prishtina, 18,174; Veliz, 15,624; Novibazar, 13,434; Debar, 10,199; Tetovo, 10,070.

**PRODUCTION.** Agriculture is practically the only industry. Before the German invasion nearly every peasant occupied and cultivated his own freehold, varying from 10 to 30 acres, and enjoyed immunity from dire necessity. Alms-house and pauperism were almost unknown. The country is rugged and broken by stretches of uncultivated heath. About 130,000 acres are devoted to plum orchards, the fruit being preserved in large quantities for export, as well as distilled for spirits. It is reported that in 1911, 954,571 acres were sown to wheat; 254,593 to barley; 258,789 to oats; 123,218 to rye; 1,442,638 to corn; 11,263 to sugar beets. No complete crop returns are available; wheat is reported at 4,167,000 quintals for 1912; rye, 435,000; barley, 1,003,000; oats, 733,000; corn, 6,739,000. There were reported in the country Dec. 31, 1910: 965,208 cattle; 3,808,815 sheep; 125,617 horses; 836,544 swine; 627,427 goats. Over 135,000 hectares are in worked forest, 167,000 in unworked forest.

The output of the mines was valued in 1911 at 15,413,945 dinars: 8,165,731 dinars copper; 3,775,776, coal; 1,433,603, gold; etc. Meat packing, milling, brewing, distilling, sugar refining,

carpet-weaving, etc. were the principal manufacturing industries.

COMMERCE. In the table below is shown the trade for three years, values in dinars:

	1910	1911	1912
Imports .....	84,697,000	115,425,000	106,098,000
Exports .....	98,888,000	116,916,000	84,221,000

The principal articles of export (values for 1912 in thousands of dinars) follows: wheat, 17,771; meat, 15,280; corn, 7396; skins, 7332; poultry, 3751; live animals, 2130; prunes, 1764. The principal countries of origin and destination were Austria-Hungary, Germany, Turkey, Russia, France, Italy, United Kingdom, United States, Belgium, Rumania, Bulgaria, etc.

FINANCE. The unit of value is the dinar (par value, 19.295 cents). Official financial statistics are at present unavailable. Some details of the 1913 budget are reported as follows: 30,613,000 dinars revenue from direct taxes; 31,655,698 from monopolies; 14,500,000 from customs; 16,000,000 from state railways; 9,001,000, excise; 8,402,000, fines; 5,547,485, domains; 4,100,000, posts and telegraphs; 5,825,165, various; 5,093,365, extraordinary. Expenditure for service of the debt, 32,395,550; civil list, 1,450,000; court employees, 45,650; skupahina, 663,000; council, 198,380, etc. The 1914 budget balanced at 214,321,000 dinars.

GOVERNMENT. The Serbian government has been established in Corfu. On July 28, 1914, Austria-Hungary declared war on Serbia, but it was not until Oct. 6, 1915, that Serbia was invaded. On Oct. 9, 1915, Belgrade was occupied by Austro-German troops; on October 11th, Bulgarians invaded Serbia. On the same day Semendria was captured by the Austro-Hungarians; and on October 22nd, the Bulgarians occupied Uskub. On November 1st, Kragujevats, the principal Serbian arsenal, fell to the Austro-Germans, and on November 5th Nish was captured by the Bulgarians. On Nov. 28, 1915, the main military operations came to an end, leading finally—after Prizrend, on November 30th, and Monastir, on December 2nd, had fallen to the Bulgarians—to an Austro-Bulgarian occupation of the country.

No trustworthy detailed account of Serbian affairs was obtainable after the downfall of the state, which followed the great campaign of the Central Powers at the close of the preceding year. Reports as to the continuance of relief work appeared in the press, and there were rumors that the copper mines were again in operation. The Serbian government, including the king, escaped by way of Scutari and the king went to Saloniki and the cabinet to Brindisi and afterward to Corfu. Premier Pashitch represented Serbia at the Allied Conference of March 27th at Paris. See WAR OF THE NATIONS.

SERBIAN RELIEF. See RELIEF FOR WAR VICTIMS, section *Serbia, Armenia, and Syria*.

SEROTHERAPY. Stefanowicz has applied autoserotherapy in a case of epidemic meningitis which was refractive to antimeningococcus serum, in the following way: The fluid obtained by lumbar puncture was sterilized by exposure in a thin layer to the sunlight for three hours, it being known that only two hours' exposure is necessary to kill the meningococcus. Ten c.c. of this sterile spinal fluid

was injected under the skin on each side of the spine at the same time that antimeningococcus was given by lumbar puncture. Improvement was prompt and recovery complete in three weeks.

In tetanus (q.v.) also the subcutaneous method has proved of value in the hands of Bacri, who reports that he has given 50 to 60 c.c. of antitetanus serum subcutaneously, repeating the dose daily for about a week. All of his 13 cases recovered and the modification of the symptoms which took place under these large doses was remarkable.

SEVENTH DAY ADVENTISTS. See ADVENTISTS.

SEVENTH DAY GERMAN BRETHREN. See BRETHREN, CHURCH OF THE.

SEWERAGE AND SEWAGE TREATMENT. After ten years of work Baltimore, Md., brought to completion the most extensive sewerage system ever constructed within a decade by an American city and the largest sewage-treatment works yet built in the United States. Portions of the sewers and treatment works had been in operation for a number of years, but when active construction was started in 1906 the city was practically without sewers for the removal of house or domestic sewage, and while it had spent considerable sums for building storm sewers, yet it had nothing like a storm sewer system. The Baltimore sewerage system comprises about 800 miles of sewers, ranging in diameter from 8 inches to 29 feet; three huge sewage pumps with a capacity of 27,500,000 gallons each in 24 hours to lift about one-third the sewage of the city from a low level; and a sewage treatment plant consisting of rough and fine screens, hydrolytic tanks, Imhoff tanks, separate sludge-digesting tanks, final settling basins, sludge-drying beds, and 30 acres of sprinkling filters. A part of the work was the covering in of Jones Falls, a stream in the heart of the city that was becoming an open sewer. The cover or roof over this stream serves also as a boulevard for some distance. The work outlined cost about \$23,000,000 and was carried out under the direction of Calvin W. Hendrick, chief engineer. While no American city approaching Baltimore in size remained without a sewerage system until so late a day as it did, there are numerous fairly large cities with very inadequate systems and many small ones with only the beginnings of a system or practically no sewers at all. Many cities which had a large mileage of sewers lacked a sewerage system, the sewers having been built piecemeal, with outlets at the handiest point on the waterfront. Cincinnati, Ohio, started to remedy this defect by building intercepting sewers, which will ultimately be followed by treatment works. At Milwaukee, Wis., intercepting sewers were also being built to pick up the sewage of the whole city and bring it to a central pumping station and treatment plant (see paragraph *Sewage Treatment* below). Lesser cities were doing much the same sort of intercepting sewer work as Cincinnati and Milwaukee in order to divert untreated sewage from points on streams, lakes, or the ocean where it causes local nuisance and carry it to some point where it can be got rid of without offense. In case the volume of natural water is not large enough to so dilute and oxidize the sewage as to obviate a nuisance, treatment

works are needed, the degree of treatment depending upon the ratio of sewage to water, the use to which the water receiving the sewage is put, and other local conditions. All these governing conditions should be made the subject of careful study by competent sanitary engineers.

**PROPOSED CODE FOR SANITARY CONTROL OF WATERWAYS.** Gross popular misconception of the principles that should guide attempts to conserve natural waters from sewage pollution still prevails. As a rule laymen have little interest and opinion on the subject or else go to the other extreme and demand the impracticable. Sanitary engineers who have been working the longest and most effectively to conserve streams, lakes, bathing beaches, and shellfish waters from sewage pollution agree that there is a legitimate use of natural waters for sewage disposal and that it is abuse rather than use that should be fought. To this end, and with full recognition of the relation of sewage disposal and water-supply to health, a proposed code for the sanitary control of waterways was drawn up after long and careful study by a committee of the sanitary section of the American Public Health Association and submitted to the section in October, 1916. After consideration for a year the code was to come up for adoption in 1917. Its six sections, without explanatory notes, are so brief and illuminating as to warrant reprinting—all the more so because they were designed to receive widespread consideration and discussion before final action was taken. (The chairman of the committee was Harrison P. Eddy, 14 Beacon Street, Boston, Mass. The full report of the committee was to appear during 1917 in *The Journal of the American Public Health Association*.) The main part of the code is as follows:

"I. There shall be no objectionable deposits at any point in a waterway as a result of sewage or other wastes discharged therein.

"II. There shall be no local nuisance created at or in the vicinity of any sewage or industrial-wastes outfall, arising from excessive turbidity or the production of odors.

"III. There shall be no general nuisance created in a waterway due to excessive turbidity or to odors, as a result of sewage or other wastes discharged therein.

"IV. There shall be no interference with or undue burden upon mechanical operation or bacterial efficiency of water-purification plants procuring their raw water from a waterway.

"V. There shall be no active (potentially dangerous) bacterial contamination or gross pollution of properly located and authorized shellfish beds.

"VI. There shall be no active (potentially dangerous) bacterial contamination or gross pollution of properly located and authorized bathing beaches and other bathing places."

**SEWAGE TREATMENT.** The term "treatment" rather than "purification" is now preferred and used by many sanitary engineers because the latter implies more than is attempted in the great majority of works for the treatment of sewage. The object to be attained by sewage treatment works ranges all the way from the removal of coarse floating matter, which may be accomplished by rough or coarse screening, to the removal of practically all matter in suspension, together with the conversion of or-

ganic matter to a non-putrescible state and the reduction, or, in rare cases, the complete feasible removal, of bacteria. Much of the suspended matter may be removed by fine screens, but if the process is to be fairly complete then sedimentation or filtration, and more usually a combination of the two, is required. Where a non-putrescible effluent is needed resort is almost always had to filtration, but the same result may be obtained by the activated-sludge process that is claimed for the electrolytic process. Neither of these two, however, had been accepted by sanitary engineers generally as being on a satisfactory physical and economic basis. For high bacterial reduction, chlorine disinfection was coming into quite extensive use, but dependence continued often to be placed on intermittent sand filtration, where sand of suitable character could be had at reasonable cost. The activated-sludge process effects a high degree of bacterial removal. As matters stood in 1916, rough screening was widely used; fine screens here and there in the United States and much more commonly on the continent of Europe; septic tanks for sedimentation and sludge reduction—one-story Cameron with a few two-story Trovis in England, one-story Cameron for old and two-story Imhoff for new installations in the United States, and also two-story Imhoff in Germany; contact beds for the older and more generally sprinkling filters for the newer plants in the United States and England, with intermittent sand filters in many places in the United States; and disinfection with either hypochlorite of lime (bleaching powder) or else liquid chlorine wherever disinfection is attempted.

The activated-sludge process made considerable progress in the United States and Canada during 1916 and some advance in England, but, as already stated, it was not yet established as an economically practicable method of sewage treatment, open for general adoption under various local conditions. Milwaukee, Wis., and Cleveland, Ohio, had good-sized working-scale plants in use and were making extensive studies of results and costs, and Milwaukee expected to make a large additional installation of activated-sludge units, in the hopes that the process would prove so satisfactory as to warrant its use for the sewage of the whole city. Two large plants were under construction at Houston, Texas, designed to treat the sewage of the entire city. A few small places had built activated-sludge plants to treat all their sewage and a number of other places were experimenting with the process on a working scale. The stockyards interests at Chicago seemed to be convinced that the process was practicable for their district. Briefly, the activated-sludge process consists in forcing air under pressure through sewage in a tank in the presence of an accumulation of sludge previously activated or bacterially enlivened by air. The air is admitted at the tank bottom through porous plates or else through perforated pipes. As it rises it carries the sludge with it and keeps the sludge thoroughly distributed through the sewage. When the sewage so treated is drawn off it contains much sludge in suspension, but this settles quickly, leaving a fairly clear and non-putrescible liquid. From time to time a portion of the sludge is drawn off. The best means of sludge disposal had not yet been determined.

It was hoped that the high nitrogen content of the sludge would make it of sufficient commercial value as a fertilizer base to pay for at least the cost of recovery, but the high water content of the sludge and the necessity for drying to a per cent moisture basis if it is to go to the fertilizer factories made the commercial outcome uncertain until methods of sludge treatment had been carried further than had yet been done. Thus far, it seemed necessary to employ sedimentation, pressing, and drying to reduce the water in the sludge from its original 99 per cent of volume to the commercial requirement of 10 per cent.

**SHEEHAN, JOHN CHARLES.** An American lawyer and politician, died in New York City Feb. 9, 1916. He was born in Buffalo, N. Y., in 1848, and lived there till 1886, practicing law and holding the offices of city assessor and controller. By President Cleveland, whom Mr. Sheehan had aided in his campaign for the governorship, the post of superintendent of the Indian schools was offered him, but he declined. After removing to New York he identified himself with Tammany Hall, became a district leader, and gained the confidence of Richard Croker, so that when Croker retired as head of Tammany in 1894, he appointed Mr. Sheehan his successor. This post he held till Croker's return in 1902. Meanwhile he had held various offices, secretary and auditor of the Aqueduct Commission till 1892, and then for three years police commissioner of New York. As a lawyer, he gained his biggest success, when, after nine years, the Long Acre Electric Light and Power Company, of which he was counsel, won its fight for the right to manufacture and sell electric current in New York City.

**SHEEP.** See STOCK RAISING.

**SHERMAN, FRANK DEMPSTER.** An American educator and writer of light verse, died in New York City Sept. 19, 1916. He was born at Peekskill, N. Y., in 1860. He graduated in 1884 from the School of Architecture at Columbia University and later went to Harvard University for a year. In 1887 he was appointed assistant in architecture at Columbia, adjunct professor of architecture in 1891, and professor of graphics in 1904. He became widely known as a writer of verse, was deeply interested in genealogy, and wrote a complete genealogy of the Sherman family. He was elected a member of the National Institute of Arts and Letters. His publications include: *Madrigals and Catches* (1887); *New Waggings of Old Tales* (1888), with John Kendrick Bangs; *Lyrics for a Lute* (1890); *Little-Folk Lyrics* (1892); *Lyrics of Joy* (1904); *A Southern Flight* (1906), with Clinton Scollard.

**SHIPBUILDING.** With the destruction of merchant shipping through the war and the demand for bottoms to carry cargoes to and

from various nations whose normal production and trade had been interrupted, the building of ships for commerce was indeed important in 1916. Naturally in the belligerent countries at the end of the year few if any authoritative reports and statistics were available, but the United States Bureau of Navigation estimated that the merchant shipping built in the world during the calendar year 1916 numbered 2505 vessels of 1,899,943 gross tons, while during the same period 1149 vessels of 2,082,683 gross tons were lost through war causes, a net reduction of about 200,000 gross tons, or one-half of 1 per cent of the world's merchant shipping, which comprised 48,683,136 gross tons, according to Lloyd's Register in June, 1916. See SHIPPING.

The construction of merchant ships for 1916 may be divided as follows:

Country	Vessels	Gross tons
Built in the United States . . . . .	1,218	560,239
Built in the United Kingdom and British Dominions . . . . .	510	619,336
Built in other foreign countries . . . . .	782	720,368
Total . . . . .	2,505	1,899,943

The figures for countries outside of the United States were derived from the annual shipbuilding review of the Glasgow (Scotland) *Herald*, usually accepted as authoritative, subject to minor modifications from official publications, which appear much later. Of the United Kingdom totals, 412 merchant vessels of 582,305 gross tons, the Glasgow *Herald* was compelled to state that in accordance with the request of the Admiralty and the Board of Trade, all details of the work done in the shipbuilding yards of the United Kingdom were necessarily omitted, but that the returns from all the districts had been compiled with as much detail as in previous years and the bare totals announced possessed their usual authority. For the British Dominions the *Herald's* returns covered in detail 98 vessels of 37,031 gross tons, making a total for the United Kingdom and British Dominions of 510 vessels of 619,336 gross tons.

The figures for other countries are summarized in the accompanying table. In some instances the totals include ships launched and not completed, offset in part by the fact that in some instances vessels completed late in December were not tabulated. Excluding warships the details for merchant vessels built in 1916 were as follows:

Country	Vessels	Gross tons	Country	Vessels	Gross tons
Japan . . . . .	250	246,234	Denmark . . . . .	80	37,150
Holland . . . . .	297	208,180	Germany . . . . .	18	25,950
Italy . . . . .	80	60,472	Spain . . . . .	4	10,071
Norway . . . . .	70	44,903	China . . . . .	38	7,861
Sweden . . . . .	85	40,090			
France . . . . .	10	39,457	Total . . . . .	782	720,368

In commenting on its figures the Glasgow *Herald* remarked:

"In Japan the total was almost three times that of 1915, the increase being accounted for principally by the construction of a good many large cargo steamers. In Holland the shipbuilders have been working under exceptional difficulties, and one firm states in its report that owing to the increasing difficulty of obtaining materials stagnation in the industry is threatened. With regard to the German figures, it is

not for a moment pretended that these represent the work done in that country. They only represent the work of which information has been received, and these are probably a small part of the total, while the reports, particularly those respecting the two warships understood to have been launched, were not always very definite."

**GREAT BRITAIN.** With many private yards working on government vessels and a shortage of labor and supplies, it was inevitable that there should be a decreased tonnage for the year. Among the figures available were some summaries of output along the Clyde where the tonnage was very small compared even with 1915, when the mercantile total consisted of only 126 vessels, of 215,000 tons and 180,000 indicated horse power; and still more so with the figures for 1914, when the aggregates were 460,260 tons and 496,120 indicated horse power—all mercantile. In 1916 it was estimated that the measurement could not be much more than 150,000 tons. It was stated further that no high-powered mercantile vessels had been launched, and no really notable vessels of any kind. The most noteworthy were the twin-screw motor ship *Glenamoy*, of 7270 tons, built at Irvine by Harland & Wolff, Ltd., for the Glen Line of London and engined at Glasgow by the Burmeister & Wain Company, Ltd., and the geared turbine steamer *Westmoreland*, of 7500 tons, built by D. & W. Henderson & Co., Ltd., at Patrick, for the Federal Steam Navigation Company, Ltd., also of London, and engined by the Parsons Marine Steam Turbine Company, Ltd., Wallsend-on-Tyne.

Excluding an oil tank vessel of 5000 tons at Dumbarton, two Lampport & Holt steamers of 7300 tons at Govan, and a British India steamer of 8250 tons at Whiteinch, the list of launchings included only medium sized cargo vessels and a fair number of craft of small size.

British shipbuilders were paying more attention to internal combustion engined ships, and the most important order placed during the year was for four sister ships, each with a carrying capacity of over 13,000 tons and a speed of about 13 knots—which would make them the largest and fastest motor vessels yet to be constructed for purely mercantile work. The length of these vessels was to be approximately 470 feet, and the engines to be fitted in each craft would be two four-cycle motors of the type installed in the Glen liners *Glenamoy* and *Glengyle*, but much larger. They were to be eight-cylinder machines, each developing 3200 indicated horse power, giving a total machinery power of 6400 indicated horse power. These engines were to be built on the Clyde, as no doubt the hulls also, the orders being in the hands of Harland & Wolff, Ltd., and it was hoped that all four ships would be completed well within two years.

**GERMANY.** Shipbuilding in Germany in 1916 approximated in its results the figures of the previous year, but there were an increasing number of contracts for new tonnage and a general extension of the shipyards and increased facilities to take care of future business. Referring to these improvements the *Hamburger Fremdenblatt* said about the end of the year:

"This places our shipbuilding yards in a position to continue their activity for the mercantile marine while at the same time proceeding with their important work for the navy, and thus Germany is assured of a superiority over the

commercial fleet of England, whose yards are overburdened with war work to such an extent that the building of merchant ships must necessarily be postponed."

It was stated officially that the tonnage built in German shipyards since the outbreak of the war to the end of 1916 had exceeded three-quarters of a million, and that preparations were being made for great activity after the cessation of hostilities. Harbor improvements were being made at Bremen, Stettin, and Hamburg, and the extension of the German canal system was hoped to stimulate increased production of light draft vessels and barges.

In connection with the development of the internal combustion motor, a field where, prior to the war, Germany had accomplished considerable, an important step was taken by the establishment of a motor shipbuilding yard at Hamburg by the Allgemeine Elektrizitäts Gesellschaft—an enterprise with which the Hamburg-American Line was also closely associated.

One indication of the prosperous situation of the German shipbuilding industry in war times was afforded by the report of the Howaldt Works, Kiel, for the year 1915-16. This concern, which shortly before the war was in serious financial difficulties, was able to declare a dividend of 8 per cent, or 3 per cent higher than its previous distribution. The works, it is stated in the report, were "employed at their full capacity throughout the year; overtime was constant, and in some departments work was carried on day and night for long periods." For the year 1916, it was declared, the company was provided with contracts which would keep the works fully engaged for some time ahead.

**JAPAN.** So prosperous was the Japanese shipbuilding industry in 1916, that the Japanese government was considering the question of reducing the national assistance hitherto extended to shipbuilding. Such assistance, however, had been so advantageous that when the war broke out in Europe and many ships were diverted from commercial to naval purposes, Japanese shipowners made great profits. Highly remunerative freight rates were earned by Japanese ships and proved even a greater stimulus than the government subsidies granted. This growth in shipbuilding, however, resulted in a heavy increase in the amount which the government was called upon to pay to shipbuilders. In 1914 these payments amounted to \$815,000, in 1916 they were estimated to be \$1,561,000, and in 1917 they were expected to be about \$2,900,000. In eight months of 1916 120,000 tons of new steamships were launched from Japanese yards. During the five years prior to the outbreak of the European war only 49,000 tons of steamships were built annually in Japan, or about one-third of eight months' output in 1916. Before the war Japan used to purchase about 100,000 tons of steamships every year from abroad.

**AMERICAN CONSTRUCTION.** In the United States during the calendar year 1916 private shipyards built 1163 merchant vessels, of 520,847 gross tons, which were officially numbered for American shipowners. American shipbuilders also built 50 vessels of 39,392 gross tons for foreign owners, making a total output of 1213 vessels, of 560,239 gross tons, for the 12 months. The record output for the United States was 614,216 gross tons built during the 12 months

ended June 30, 1908, and the 1916 record was also exceeded during the fiscal year 1855, when 583,450 gross tons were built, all of wood except seven iron vessels of 1891 gross tons. Of the 1916 output 152 vessels, of 414,029 gross tons, were built of steel, which was exceeded by the output of 149 steel vessels, of 450,017 gross tons, during the fiscal year 1908. The output of that year, however, was mainly for the Great Lakes, while most of the steel tonnage of 1916 was built for the ocean foreign trade.

The accompanying details of vessels built and officially numbered in the United States in 1916, compared with 1915, were reported by the Bureau of Navigation:

suffered heavily. Of ships building or ordered in the United States on July 1, 1916, fully 125,000 gross tons were for foreign shipowners. The first of these large steamships, the *Antwerpen*, 7955 gross tons, was transferred to the Netherlands flag soon after completion, and on her initial voyage was destroyed with a valuable cargo. Since July 1, 1916, the tonnage ordered in American yards for foreign shipowners exceeded that ordered for American owners. The fact that between 10 and 15 per cent of the merchant tonnage building at the end of 1916 was in American yards was a matter of promise for the future of the industry.

The steel merchant vessels building or under

During the fiscal year 1915-16 American shipyards began the extensive construction of ocean steamships for foreign owners, mainly Norwegians. Much of the new shipbuilding for Norwegian owners was taking place on the Pacific coast and it was said that they were so liberal in their advances that a number of yards could be established. While Scandinavian owners had benefited by the war, they had also

contract to be built in private American shipyards on Dec. 31, 1916, according to builders' returns to the Bureau of Navigation, numbered 403, of 1,495,601 gross tons, the largest tonnage in the history of American shipbuilding. During December, 1916, American yards finished nine steel merchant vessels of 24,363 gross tons and made new contracts for 29 vessels of 105,120 gross tons. The accompanying tabulation shows

the types of steel merchant vessels building or under contract on July 1, 1916, and on Dec. 31, 1916, respectively:

Type	Number July 1, 1916	Gross tons	Number Dec. 31, 1916	Gross tons
Cargo vessels .....	240	639,817	294	1,002,398
Oil and molasses tankers	80	500,608	76	429,916
Passenger-and-cargo vessels .....	8	52,328	7	50,728
Car floats and ferries ..	24	20,064	8	5,914
Towing vessels .....	14	2,572	11	2,387
All others .....	19	10,895	7	4,258
<b>Total .....</b>	<b>365</b>	<b>1,225,784</b>	<b>408</b>	<b>1,495,601</b>

American builders expected to launch during the calendar year 1917 357 vessels of 1,250,722 gross tons, and in the calendar year 1918 46 vessels of 244,879 gross tons. Wooden merchant vessels of 500 gross tons or over building or under contract to be built in private American shipyards on Dec. 31, 1916, numbered 161, of

kirk, France; and an oil tanker of 10,050 tons at Newport News.

See BATTLESHIPS AND OTHER WAR VESSELS; NAVAL PROGRESS; SUBMARINES.

**SHIPPING.** In maritime industry the year 1916 stands out as a period of destruction due to the more vigorous prosecution of the war at sea. This involved a striking decrease in the world's shipping amounting to over 400,000 tons in two years in place of a normal increase of about 4,000,000 tons in the same period. The main features of the year were the more than active employment of the merchant tonnage of the Allied nations, the disappearance of the Teutonic nations from the sea-borne carrying trade, and the vigorous prosecution of commerce on the part of the various neutral nations. The effects of two years of war are forcibly shown in the accompanying table from the Annual Report of the United States Commission of Navigation which shows the changes in the merchant tonnage of the world:

June 30—	Allies	Central Powers	United States	Other neutrals	Total
1914 .....	28,324,384	6,848,173	5,368,194	8,748,801	49,089,552
1915 .....	28,630,927	5,857,399	5,892,639	8,880,804	49,261,769
1916 .....	28,598,880	5,144,958	6,148,861	8,790,937	48,688,136

207,623 gross tons, according to builders' returns to the Bureau of Navigation.

The geographical distribution of tonnage under construction is shown by the following table:

Geographical division	No.	Total construction		Sail and unrigged		Power	
		Gross tons	No.	Gross tons	No.	Gross tons	
New England .....	26	a 24,823	26	a 24,823	..	.....

<b>Total .....</b>	<b>161</b>	<b>a 207,623</b>	<b>78</b>	<b>a 70,905</b>	<b>83</b>	<b>186,718</b>	

a Tonnage incomplete.

**LARGE VESSELS.** A feature of construction in all countries was that practically all the craft built were cargo boats, with a few notable exceptions. In the United Kingdom the Royal Mail steamer *Brecknockshire*, of 12,000 tons, was launched at Belfast, and the Ocean Line steamer *Tyndareus*, of 11,000 tons, at Greenock. The largest merchant ship of the year, the turbine liner *Paris*, of 24,000 tons and 45,000 indicated horse power, was launched at St. Nazaire. There was also the Italian turbine liner *Duilo*, of 21,700 tons and 22,000 indicated horse power, launched at Sestri Ponente; while in Germany a Hamburg-South American liner of 21,500 tons was said to have been launched at Hamburg. Two splendid Italian steamers, *Milazzo* and *Volturno*, each of 11,477 tons, were built at Spezia; a cargo steamer of 10,700 tons at Dun-

periods, that for 1914 being just before the outbreak of the war:

June 30—	Foreign trade	Coasting trade		Total
		Great Lakes	Sea and rivers	
1914 .....	1,076,152	2,882,922	8,969,614	7,928,688
1915 .....	1,871,543	2,818,000	8,699,886	8,389,429
1916 .....	2,191,715	2,760,815	8,517,119	8,469,649

Not only did the United States possess a greater amount of tonnage in 1916 than before the war, but it was increasingly used, and the clearances in net tons of 100 cubic feet of closed in ship space available for cargo carrying are also of interest. The accompanying table indicates the activity of American and other ships in the over-seas export trade of the United States for the fiscal years ended June 30th:

Clearances for—	American		Foreign		1916
	1914	1915	1914	1915

					<b>+1,791,018</b>

**TONNAGE LOST IN 1916.** According to the records kept and statistics carefully compiled by the *Journal of Commerce and Commercial Bulletin* (New York) during the 29 months since the beginning of the war, up to and including Dec. 31, 1916, approximately 2146 merchant vessels, of all types and classes, were destroyed as a result of the operations of belligerents on the seas, principally by mines and submarines. The activities of the submarines in the Mediterranean were particularly destructive, while longer cruises by these craft increased the area of their destruction. The aggregate gross tonnage of the destroyed vessels, exclusive of a considerable number whose tonnage is not recorded, was 3,982,556 tons, or more than the tonnage owned by any nation except Great Britain, Germany, and the United States. Of this total, 1149 vessels, with an aggregate gross tonnage of 2,082,683 tons, were destroyed in 1916. The campaign of 1916 was particularly severe on neutral shipping, for Norway, France, Italy, Belgium, Holland, the United States, Denmark, Greece, and Spain lost more merchant vessels in 1916 than during the preceding 17 months of the war.

The accompanying table prepared by the *Jour-*

**GROSS TONNAGE OF MERCHANT SHIPS DESTROYED**

	To Jan. 1, 1916	1916	Total
Great Britain	1,225,498	1,184,650	2,360,148

Russian	1,256	1,054,762	55	63,892
Spanish	642	899,204	21	44,516
Swedish	1,462	1,122,888	85	77,622

\* Excluding vessels trading on the Great Lakes of North America. † Japanese sailing vessels are not inserted in Lloyd's Register Year Book and are therefore not included in this table.

ping it is desirable to consider the total losses of the principal nations to Dec. 31, 1916, compared with the number of ships and the amount of tonnage of their merchant marine, as shown in the preceding table.

While many of the vessels destroyed were small yet many large ships suffered. The British steamer *Britannic*, built for the transatlantic service of the White Star Line, but never used except as a hospital ship, was the largest vessel sunk in 1916, striking a mine in the Adriatic Sea. She was the largest British ship afloat. Eight ships of more than 10,000 gross tons each were sunk during the year, five of them British, as follows:

Name and flag	Gross tons
Britannic, British	48,158
Franconia, British	18,150
Tubantia, Dutch	15,000
Gallia, French	14,966
Alaunia, British	13,405
Cymric, British	13,370
Antwerpen, Dutch	11,300
Rowanmore, British	10,320

One feature of the war as regards shipping was the extent, and the increasing extent, that neutral vessels suffered. Belligerent tonnage destroyed in 1916 amounted to 1,522,006 gross tons, or only about 73 per cent of the total destroyed during the year. Great Britain's losses to the end of 1916 represented something more than half of the total, while Norway, which stood second on the list, contributed less than 10 per cent. Norway lost during 1916 more tonnage than any belligerent except Great Britain during the entire war period, and her whole loss was more than that of the Teutonic Powers or the combined losses of any other three neutral nations. The accompanying table shows the proportionate share of tonnage losses:

	To Jan. 1, 1916	1916	Total
<b>Allies—</b>			
Tonnage	1,474,112	1,485,214	2,959,326
Per cent	77.5	71.3	74.3
<b>Neutrals—</b>			
Tonnage	234,658	563,502	738,155
Per cent	12.3	26.9	19.9
<b>Teutons—</b>			
Tonnage	193,278	36,792	230,070
Per cent	10.2	1.8	.58

**WORLD'S SHIPPING IN 1916.** In the table on page 633 are given the number and net and gross tonnage of steam and sailing vessels of over 100 tons, of the several countries of the world, as recorded in Lloyd's Register for 1916-17.

**AMERICAN MERCHANT MARINE.** The accompanying official table shows the geographical distribution, motive power, and material of construction of vessels of the United States for the fiscal year 1916 in comparison with similar data for the year 1915:

**COMPARISON OF AMERICAN MERCHANT MARINE OF 1915 AND 1916**

a Included in steam prior to 1915. b Includes 2 concrete barges of 565 gross tons.

During the fiscal year 1915-16 only 26 foreign built vessels of 69,697 tons were transferred to

the American flag under the Act of Aug. 18, 1914, as compared with 140 of 513,306 gross tons in 1914-15. This was due to the extensive legislation by European countries prohibiting the sale to foreign owners except under special conditions during the time of the war or some additional period. During the fiscal year 1915-16 160 merchant vessels of the United States of 102,479 gross tons were sold to aliens and transferred from the American to foreign flags, compared with 77 of 18,595 gross tons, so transferred during the previous fiscal year. The tonnage of American ships sold to aliens during the year 1915-16 was the largest of any year since the Civil War, when destruction by Confederate cruisers led for three years to the transfer of large amounts of tonnage. The 18-knot Pacific Mail Steamship *Siberia*, 11,306 gross tons, the fastest American steamship crossing the Pacific, was purchased by the Japanese Toyo Kaisen Kaisha, and its sister ship *Korea* was also transferred to the same owner. British owners purchased 26,825 gross tons, Japanese 13,988 gross tons, Norwegian 6804 gross tons, Spanish 5955 gross tons, and the balance was bought by citizens and subjects of other countries.

THE SHIPPING ACT. In the United States for over half a century there had been bitter conflict over the best methods of establishing or aiding the American merchant marine by some form of Federal interest or assistance. On Sep. 7, 1916, the so-called Shipping Act became a law after a long struggle in Congress. This act was a compromise measure passed only by the most

vigorous political pressure, after a more comprehensive bill looking towards direct government ownership was defeated. The Shipping Act established a board of five members who were authorized (a) to procure by purchase or construction cargo ships to the value of \$50,000,000 and set them at work in carrying American merchandise to foreign countries, and (b) to regulate the rates and general business practices of the American merchant marine much as was done by the Interstate Commerce Commission for the land carriers. The act was criticized as combining in a single law two entirely different classes of functions, as the board was authorized to secure and operate government-owned ships directly in competition with those whose rates and practices they were directed to regulate. It was considered more than questionable whether \$50,000,000 of tonnage could be secured by purchase for the government or whether ships could be constructed on favorable terms to the government in view of the demand from private corporations both at home and abroad. In its regulating provisions the Ship Board was authorized to prevent all the various irregularities found in ocean and Great Lakes commerce, many of which were duly enumerated and specifically forbidden. Power also was given to the board to investigate complaints by shippers or rival vessel owners. While parts of the act would require construction by the Supreme Court, yet confidence was expressed that it would serve to make uniform water transportation problems and stabilize freight rates. The members of the Shipping Board (q.v.) were not nominated by the President until late in the year, so that it was not organized for work.

**LA FOLLETTE SEAMEN'S ACT.** This measure, enacted March 4, 1915, was in effect in 1916, but conditions were so unusual that shipowners and ship captains complied with many of its provisions, while it was variously construed with the aim of facilitating commerce. There was, however, continued criticism which under more normal conditions unquestionably would have led to a call for its amendment. See SHIP-BUILDING.

**SHIPPING BOARD, UNITED STATES.** A board authorized by Congress in 1916, with powers of investigation, regulation, and rate fixing over United States marine business. The board may issue bonds not to exceed \$50,000,000 to build, purchase, or lease vessels for a merchant marine. It constitutes the head of a corporation which will endure for a period not to exceed five years after the war. The salary of board members was fixed at \$7500 annually. The personnel of the board was announced by President Wilson December 22nd as follows: William Denman, San Francisco admiralty lawyer, Democrat (six years); Bernard M. Baker, Baltimore shipowner, Democrat (five years); John A. Donald, New York steamship owner, Democrat (four years); John Barber White, Kansas City exporter, Republican (three years); and Theodore Brent, New Orleans transportation expert, Republican (two years).

**SHIP PURCHASE BILL.** See FINANCIAL REVIEW.

**SHIVELY, BENJAMIN FRANKLIN.** An American legislator, died in Washington, D. C., March 14, 1916. Born in St. Joseph County, Ind., in 1857, he studied at the Northern Indiana Normal School, then taught for some years and ran a

country newspaper. At 27 he was appointed to fill out an unexpired term in Congress, and from that time he was identified with Democratic politics. He held his seat in the House for consecutive terms until 1892, when he was not a candidate. Meanwhile, he had pursued law studies and had taken the degree of LL.B. at the University of Michigan (1888). As a lawyer at South Bend, Ind., Mr. Shively gained a leading position at the State bar. In 1903 and 1905 he received the complimentary Democratic vote for United States Senator, in 1908 he was elected to the Senate, and in 1914 was re-elected, this time by popular vote. For a time he was leader of his party in the upper house, and he retained a position of prominence, being chairman of the Committee on Pensions, ranking next to Senator Stone of Missouri on the Foreign Relations Committee, and exercising much influence in the Committee on Finance. Foreign affairs and the tariff were his chief interests. In 1914, when Senator Stone was ill, Mr. Shively, as acting chairman of the Committee on Foreign Relations, was entrusted with the Mexican difficulties of that period. He was president of the board of trustees of Indiana University. Thomas Taggart, Democratic Committeeman of Indiana, was appointed to serve as his senatorial successor until the election of 1916.

**SHOES.** See BOOTS AND SHOES.

**SHOOTING.** The national rifle shooting matches in 1916 were held near Jacksonville, Fla., the winners being as follows: Individual, W. H. Spencer, St. Louis, Mo., score 274; team, class A, National Trophy, U. S. Marine Corps, score 3047; class B, Hilton Trophy, New York National Guard, score 3037; class C, Marathon Trophy, California Civilian team, score 2964; pistol, George E. Cook, District of Columbia Civilian team, score 399; united service match, U. S. Marine Corps, score 4320.

The any-revolver championship was won by George Armstrong of San Francisco, Cal., with a score of 463, and the pocket revolver title went to Dr. J. H. Snook of Columbus, Ohio, who made a score of 209. In the target pistol contest George Armstrong was the victor with a score of 471.

The Interstate Association Trapshooting Tournament was held at St. Louis, Mo., the winners of the principal events being as follows: Grand American Handicap, J. F. Wulf of Milwaukee, Wis., with a score of 99 out of a possible 100; National Amateur, F. M. Troeh of Vancouver, Wash., with a score of 99 out of a possible 100. The professional championship was captured by P. R. Miller.

The Grand American Handicap went to J. F. Wulf.

**SIAM.** An independent kingdom in the southeast of Asia; a buffer state between British Burma and French Indo-China. Bangkok is the capital.

**AREA, POPULATION, ETC.** The total area is estimated at 600,000 square kilometers, or 198,900 square miles. Population (1910-11), 8,149,487. Persons in holy orders, 142,636. Births (1910-11), 162,491; deaths, 84,495. Immigration of Chinese coolies in 1912, 68,361, and emigration, 45,986; in 1911, 71,258 and 52,562; in 1910, 75,408 and 63,007. Siamese, Chinese, Malays, Cambodians, Mohns, Karens, Annamites, etc., make up the population. Foreign resi-

dents, about 2000. Bangkok has 628,675 inhabitants, of whom 197,918 Chinese.

Buddhism is the state religion, and the priests are in large measure in charge of educational matters. A new plan of education has been drawn up by the ministry of public instruction, and government-aided secular schools are being introduced. There are several missions.

**PRODUCTION.** Serfdom until recent years was the lot of a large part of the population, enslavement for debt being abolished only during the reign of Chulalongkorn. Partly for this reason agriculture is in a backward condition. Rice is the leading crop and the introduction of irrigation has greatly extended the available area. There are 26 rice mills (2 British, 2 German, 22 Chinese) in Bangkok. Next in importance after rice is the teak industry, carried on in the great northern forests mainly by British enterprise. Cattle and hides are exported.

Tin and wolfram are mined on a commercial scale. Gems have ceased to be an important product since the cession to the French of the Pailin district in 1907.

**COMMERCE AND COMMUNICATIONS.** A large proportion of the over-sea trade is with Great Britain; much of the trade passes through Singapore and Hongkong, though German and Norwegian shipping exceed British. The table below shows countries of origin and destination with the value of their trade for 1913-14 and 1914-15 in thousands of pounds sterling:

	Imports		Exports	
	1913-14	1914-15	1913-14	1914-15
United Kingdom..	1,500	1,058	447	1,088
China .....	673	662	26	16
British India .....	715	717	150	202
Germany .....	510	241	569	202

Hongkong .....	1,114	1,157	171	54
Belgium .....	126	86	...	...
Other .....	...	...	...	...
Total .....	6,962	6,009	8,859	7,788

Vessels entered in the 1914-15 trade, 898, of 805,638 tons.

State railways (1912), 1024 kilometers, of which 213 kilometers local lines; private railways, 106 kilometers. During the fiscal year ended March 31, 1916, 105 miles of new line were constructed on the southern line of the Royal State Railways of Siam, making a total length of 495 miles open to traffic at the end of the year. The gross revenue amounted to \$564,779, showing an increase of \$73,560, or 15 per cent, over that of the preceding year, caused partly by increased receipts on the southern sections. Passengers yielded \$400,193 of the revenue and freight \$153,469. In the freight traffic of the line, as a whole, timber was the most important item, a position held by paddy the year before. It was expected that an additional section of the Siamese Northern Railway from Lampang to Pang-Hoa-Pong, a distance of 21 miles, would be ready for traffic by the end of 1916. This brings the line to the foot of a range of hills, where it will pass through the recently completed Koon Tan tunnel and on to Pang-Choom-Pu. At this point it was thought likely that construction might be delayed for a time, owing to the fact that there was not a sufficient supply of rails on hand due to war conditions in the steel markets of the world. It was proposed to

construct a road suitable for motor traffic from Pang-Choom-Pu to Lampoon, a distance of 24 miles; from the latter city to Chiengmai a good road being already in existence.

On the final completion of the line from Bangkok to Chiengmai it will be possible to cover the distance between these cities in 24 hours, a great advance on the one or two months required for the journey by boat.

Reigning king (Somdetch Phra Paramindr), Maha Vajiravudh, born Jan. 1, 1881.

**SIDGWICK, ETHEL.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*, English.

**SIDNEY, SIR PHILIP.** See LITERATURE, ENGLISH AND AMERICAN, *History*, etc., English.

**SIENKIEWICZ, HENRYK.** A famous Polish novelist, died at Vevey, Switzerland, Nov. 16, 1916. He was born in Wola Okrzejska, Government of Siedlce, in 1846. The son of a Polish country squire, he was educated at the Realgymnasium at Warsaw, where he graduated, and later studied philosophy at the university of that city. After leaving the university he traveled extensively throughout his native country, learning thoroughly the history and condition of its people. His first literary efforts, published in 1872, were a sketch of a Kiev student life entitled *In Vain*, and a humorous story, *Nobody is a Prophet in his own Country*. He had witnessed the revolutionary struggle, including the terrible scenes in Warsaw in 1869, and was imbued with patriotic fervor. In 1876 he visited the United States, and his description of his American experiences in a series of letters in the *Polish Gazette* attracted much attention. His drama, *On a Card* (1879), dealing with the party struggles in Galicia, as well as his stories, *From the Note-Book of a Posen Teacher*, *Hanja*, and *Yanko the Musician*, added to his reputation. In 1880 he published *The Tatar Bondage*, a novel. The quick response to its patriotic appeal induced him to write the great trilogy *With Fire and Sword* (1884), *The Deluge* (1886), and *Pan Michael* (1888), novels dealing with the struggle of the Poles and Cossacks. In them his vivid descriptions of historical personages, while often inaccurate, stimulated the imagination of his readers and made a powerful impression. These were followed in 1890 by *Without Dogma*, a study in pathological psychology written in the form of a diary. *The Children of the Soil* (1894) is a novel of contemporary Polish manners. Up to this date his books, powerful though they were, had but a local and national appeal, but *Quo Vadis*, published in 1896, and repeatedly dramatized,—an epitome of Christian life and persecution in the reign of Nero—brought him world-wide fame. His *Knights of the Cross* (1904) takes the reader back to the time of the fierce struggles between the Poles and the Order of Teutonic Knights. Besides these works he wrote: *Life and Death and Other Legends and Stories* (1904); *On the Field of Glory* (1906); *In Life's Whirlpool* (1910); *In Desert and Woodland* (1911). In 1905 Sienkiewicz received the Nobel prize in literature. For many years he was the editor-in-chief of the periodical *Słowo*. His works have been translated into many European languages. During the past 30 years he had been the most widely known and attractive personality among the Polish people. After the outbreak of the European war he removed to Switzerland where he lived until his death. He

was very active in behalf of his suffering fellow-countrymen and was president of the General Relief Committee for Polish victims of the war. Greatly encouraged by the proclamation of the Russian Emperor in favor of a united and autonomous Poland, he predicted a bright future for his people after the war.

**SIERRA LEONE.** A British colony and protectorate on the west coast of Africa. Total area, 32,110 square miles; total estimated population, 1,327,560. Population of the Sierra Leone peninsula (1911), 75,318. Freetown (34,000 inhabitants) is the capital. The country is unhealthful and the inhabitants are averse to agriculture and other industries. Wild products constitute the bulk of the exports—kola nuts, palm kernels, palm oil, rubber, copal, and ginger. Imports 1914 were valued at £1,405,049; exports, £1,250,478. Revenue 1914, £675,689; expenditure, £680,146.

**SILESIA.** A crownland of Austria; area 1987 square miles; population, 1910, 756,949. Also a province of Prussia (see GERMANY, *Area and Population*).

**SILK.** The silk industry in 1916 reflected the two leading considerations in the industrial and commercial world, namely, the war in Europe and the great prosperity of the United States. While the war had its effect in reducing production and manufacturing in France and Italy and on the shipment of raw silk from the Levant and Asia Minor, yet there were gains in Japan and China, and the United States was able to absorb and manufacture the increased imports that came to her shores. So far as the American industry was concerned the year 1916 was a period of great prosperity, and the values of the raw materials and the finished product rose to new records. In March American manufacturers were forced to pay as much as \$5.57½ a pound for Sin-shiu No. 1 or tram stock and \$6.50 a pound for Kansai double extra crack chops or organ stock. Prices fluctuated during the year, with raw silk usually in good demand, and in November prices were tending again toward those of March. Record figures were also made for Italian, Canton, and China silks. On account of the war Europe was able to take only about one-half its customary supply from Japan, so an average of over 80 per cent of the exports from Yokohama went to the United States. In the 1916 season of a total of 199,800 bales 171,100 were shipped from Yokohama to the United States, a record only approached in 1914, when 142,900 bales out of a total of 200,400 came to America. These figures are significant, as but a few years earlier the total exports of Japan were only about 100,000 bales.

Shipments from Italy to the United States for the season ended June 30, 1916, were 10,945 bales as compared with 11,977 bales in 1915 and 8471 bales in 1913-14, the 1915 record being unusually heavy. During the season 1915-16 the imports of raw silk into the United States amounted to \$119,000,000, whereas in 1871-72 the figure was \$5,600,000. As regards quantities and sources the total importation of raw silk into the United States for the fiscal years 1914-15 and 1915-16 was as follows:

	1915-16		1914-15	
	Bales	Pounds	Bales	Pounds
From Italy and France . . . . .	12,490	2,760,000	12,650	2,790,000
From Japan . . . . .	171,100	28,100,000	180,600	17,630,000

	1915-16		1914-15	
	Bales	Pounds	Bales	Pounds
From Canton . . . . .	20,690	2,207,000	21,806	2,273,000
From Shanghai . . . . .	27,896	3,762,000	15,488	2,092,000
Tussah silk . . . . .	13,185	1,786,000	6,480	877,000
		33,615,000		25,662,000

There was an increase for 1915-16 of almost 8,000,000 pounds, or 31 per cent over the previous year, and a total never before equaled in the American silk industry. The major part of this gain was due to Japan, with 5,470,000 pounds, while Shanghai shared with 1,670,000 pounds apart from Tussah silks, which showed a gain of 909,000 pounds. The imports from Canton and from Europe slightly fell off, the former showing a loss of 66,000 pounds and the latter of 30,000 pounds.

In 1916 the new crop was estimated in the *American Silk Journal* as follows:

	1916	1915
	Kilos	Kilos
Europe: Italy . . . . .	3,800,000	against 2,880,000
France and other countries . . . . .	400,000	380,000
Levant and Asia Minor . . . . .	900,000	1,000,000
Asia: Japan . . . . .	18,000,000	12,000,000
Canton . . . . .	2,100,000	1,800,000
China . . . . .	4,000,000	4,350,000
India . . . . .	100,000	90,000
	24,800,000	22,500,000

This indicated an increase of about 8 per cent over the previous year. These statistics do not include the Tussah crop, which for the season 1915-16 furnished a total export of about 1,130,000 kilos, representing 18,800 bales. In comparison with the above figures the crop in Europe and export from the Asiatic countries in 1914-15 amounted to 21,200,000 kilos, whilst the result of 1913-14, the last normal season before the war, totaled 26,200,000 kilos.

In Italy the Piedmont crop showed an increase, but other districts were about the same as in the previous year, so that the crop was about 17 per cent below the average of the previous 10 years, and a marked improvement over that for 1915, which was 31 per cent below this average. In Japan the first crop, which usually is about 60 per cent of the total production, was 10 per cent above that of 1915 and in part already sold to American consumers. The Canton total crop was below the average, and that in China was less than in the previous year.

The hosiery industry in the United States was a large consumer of raw silk and in 1916 was in a flourishing condition. On the other hand the trade in ribbons was bad as there was a call for narrow widths. In broad silks there was active business throughout the year and with the demand of fashion for georgettes, taffetas, chiffons, and staple fabrics, other silk fabrics were active though the costs for dyeing, labor, throwing, etc., advanced continuously.

As further evidence of the prosperity of the silk industry it may be said that in 1916 there were more new mills constructed than were on record for any previous year. Of the 60 new plants built more than half were equipped to weave broad silks, the balance being divided among throwing mills, ribbon weaving plants, and miscellaneous work for winding and making braids and embroideries. Three quarters of the

new silk mills were in New Jersey and Pennsylvania, about 25 per cent of the total being in the city of Paterson.

While most of the new silk mills were small and unimportant, on the other hand several large concerns in the silk industry made important enlargements which surpassed most of the new mill projects.

#### See CHEMISTRY, INDUSTRIAL.

**SILVER.** The silver production of the United States in 1916, 72,883,748 fine ounces, showed a decrease of 2,077,327 ounces from 1915, a somewhat surprising circumstance in view of the increased production of base metals where silver is a by-product. The silver output of the United States for the years 1915 and 1916 is given in the accompanying table. A decline in production also occurred in Canada while Mexico's output went below even that of 1915. At the same time the price of silver went up and in May a record price of 77¼ cents was reached. The average for the year in New York in 1916 was 65.661 cents, with December the high month with an average of 75.765 cents. In 1915 the average price for the year was 49.684 as against 54.811 cents in 1914. The chief buying for the year was for coinage and the available supplies often were hardly sufficient to meet the demand, as everywhere apparently silver coins were in request. Thus in March Australia began to mint about \$2,500,000 of silver coins and this was followed by shipments from China to India for a similar purpose. Russia also sought silver for coinage, while it was reported that the French mint, which ordinarily issues silver coins to the extent of 8,000,000 to 10,000,000 francs, and Great Britain, which issued six times as much silver coinage in 1915 as on an average for 10 years, were heavy purchasers. In China not content with exports of silver coins the coins themselves and also copper coins were bought and in defiance of the law were melted for sale and export. There was such a shortage of silver in the Far East that during the latter half of 1916 there were exports of silver from San Francisco to the Far East. See METALLURGY.

\* As reported by the Director of the United States Mint and the United States Geological Survey.

**SIMMONS COLLEGE.** A non-sectarian institution for the education of women in Boston, Mass. It was founded in 1899. In the fall of 1916 the student enrollment was divided as follows: Household economics, 393; secretarial studies, 336; library science, 124; general science, 726; social work, 94; industrial teaching, 7; and salesmanship, 40. There were 119 members in the faculty. Productive funds amounting to \$2,338,169 yielded an income in 1916 of \$86,002. The library contains 24,263 volumes. President, Henry Lefavour.

**SIMON, WILLIAM.** An American chemist, died at Eaglesmere, Pa., July 19, 1916. His home was at Catonsville, Md., near Baltimore. He was born in Germany, at Eberstadt, Hessen, in 1844, and from 1852 to 1860 studied at Giesesen. Then he removed to the United States, becoming chemist to the Baltimore Chrome Works, a position that he held till 1907. In 1871 he opened the first chemical laboratory for instruction to be established in Baltimore. For 30 years he also held a chair in the Maryland College of Pharmacy, from 1880 one in the College of Physicians and Surgeons, and from 1888 one in the Baltimore College of Dental Surgery. Professor Simon was the author of a *Manual of Chemistry*, first published in 1884, the 10th edition of which appeared in 1912. He received honorary degrees from the University of Pennsylvania and the College of Physicians and Surgeons, Baltimore.

**SIMPSON, SIR ALEXANDER RUSSELL.** A British obstetrician and gynecologist, died at Edinburgh, April 6, 1916. He was born at Bathgate, West Lothian, Scotland, in 1835, and was educated at Edinburgh University and abroad at the universities of Montpellier and Berlin. For seven years he was assistant to his uncle, Sir James Young Simpson, the discoverer of chloroform, and later practiced, for five years, in Glasgow. In 1870 he was appointed professor of midwifery and the diseases of women and children in Edinburgh University. Later he became dean of the faculty of medicine and emeritus professor in the same university, retiring in 1905. He was the author of *Contributions to Obstetrics and Gynecology*; with Dr. Berry Hart, *An Atlas of the Frozen Section of a Cadaver in the Genu-pectoral Position*; edited Sir James Young Simpson's *Lectures on the Diseases of Women*; and contributed many memoirs and papers to medical journals. In 1906 he was knighted.

**SINCLAIR, MAY.** See LITERATURE, ENGLISH AND AMERICAN, Fiction, English.

**SINGAPORE.** A division of the Straits Settlements (q.v.).

**SING SING PRISON.** See PENOLOGY.

**SINN FEIN.** See GREAT BRITAIN, History.

**SKATING.** The international outdoor championships in 1916 were held at Saranac Lake, N. Y., in February. Harry Cody of Toronto, Canada, carried off the honors with a total point score of 70. Anton O'Sicky of Cleveland, Ohio,

was second with 60. The winners of the principal races were: 220 yards, Lot Roe, Toronto, Canada; 400 yards, Ben O'Sicky, Cleveland, Ohio; one mile, Harry Cody, Toronto, Canada; two-mile, Arthur Staff, Chicago, Ill.; half mile, Ray McWhirter, Chicago, Ill.; three-mile, Carl Fisher, Milwaukee, Wis.; one-mile for boys of 16, Charles Jewtraw, Lake Placid, N. Y. Anton O'Sicky of Cleveland, Ohio, obtained the largest number of points in the indoor championships held at Pittsburgh, Pa.

Skating as a recreation continued to increase in popularity in the larger cities of the United States and many new rinks and "ice palaces" were opened to satisfy the demands of lovers of this sport.

**SLAVIC LANGUAGES.** See PHILOLOGY, MODERN.

**SLEEPER, ALBERT E.** Elected Republican Governor of Michigan Nov. 7, 1916.

**SLEET.** See METEOROLOGY.

**SLICER, THOMAS ROBERTS.** An American Unitarian clergyman, died in New York May 29, 1916. Born in Washington, D. C., in 1847, the son of the Rev. Henry Slicer, a Methodist minister who, for eight years, was chaplain of the United States Senate, and who, as presiding elder rode the Maryland circuit, he was educated at Baltimore City College, and for a decade was himself in the Methodist ministry, in Maryland, Colorado, and New York. Then he joined the Congregational Church, and became an associate of Henry Ward Beecher in Brooklyn, but soon he took a further step, and became a Unitarian in 1881. Afterward he held charges in Providence, R. I., and in Buffalo, N. Y., where he was prominent in civic life, and from 1897 to his death was minister of All Souls, in New York City. Dr. Slicer was prominent in various reform movements, and did much toward reducing race track and pool room gambling in the State. At one time he served as chairman of the National Commission on Prison Labor. Among his writings were: *The Great Affirmations of Religion* (1900); *The Way to Happiness* (1907); *From Poet to Premier: Centennial of 1909* (1909).

**SMALLEY, GEORGE WASHBURN.** An American newspaper correspondent, died in London April 4, 1916. He was born at Franklin, Mass., in 1833, and at 20 graduated from Yale, where he gained honors as a student and as an athlete. After studying law in the office of George F. Hoar, later United State Senator, and at Harvard Law School, Mr. Smalley was admitted to the bar in 1856 at Boston. At the opening of the Civil War, he was in the South, and having become known to the New York *Tribune* through a series of letters on negro life, he asked to be sent to the front. During the 11 months that he served as war correspondent, he made a remarkable record, gaining a famous "scoop" in his description of the battle of Antietam, in which encounter he served as an aid to General Hooker. Hooker highly praised his courage. From November, 1862, till 1867 he was a member of the editorial staff of the *Tribune*. In 1866, however, he had gone abroad to report the Austro-Prussian War, and in the next year he took charge, for his paper, of its London correspondence. In this post, which he

held till 1895, Mr. Smalley became noted as one of the most able and successful representatives of the press. Through his efforts Continental news reached the United States, by way of London, with greater dispatch than ever before; and responsibility for all important European correspondence of the *Tribune*, political, social, artistic, dramatic, and literary, rested with him. Particularly did his work as an organizer count during the Franco-Prussian War. Mr. Smalley was greatly appreciated in London, and his home came to be a meeting place for many of the most interesting people of the capital. To statesmen and politicians he commended himself especially by a never-failing discretion. For long he was a confidant of Gladstone. From 1895 to 1906 he again lived in the United States, as American correspondent of the *London Times*; then he retired and settled permanently in London. He published: *London Letters* (2 vols., 1890); *Studies of Men* (1895); *Life of Sir Sydney Waterlow, Bart.* (1909); *Anglo-American Memories* (1st series, 1911; 2nd series, 1912).

**SMITH, CHARLES SOOY.** See SOOY SMITH, CHARLES.

**SMITH, SIR FREDERICK E.** See GREAT BRITAIN.

**SMITH, WILLIAM SOOY.** See SOOY SMITH, WILLIAM.

**SMITH COLLEGE.** A non-sectarian institution for the education of women at Northampton, Mass. It was founded in 1871. In the fall of 1916 there were 1917 students and the faculty numbered 159. During the year \$48,000 was received for the purchase of land and \$30,000 for a new professorship. The productive funds amounted to \$2,201,883 and the income to \$151,850. In the library were 60,000 volumes. President, Marion Le Roy Burton. See also UNIVERSITIES AND COLLEGES.

**SMITHSONIAN INSTITUTION.** In his report for the year ending June 30, 1916, Charles D. Walcott, secretary of the Institution, described for the benefit of the Board of Regents and the public, activities of the Institution proper and subsidiary agencies. A separate article will be found on the United States National Museum (including the National Gallery of Art and the Freer Art Gallery). The total permanent funds of the institution, when the report was made, amounted to \$1,048,134. The income for the year was \$107,670 and the disbursements \$105,125. The secretary, Mr. Walcott, made investigations in the Yellowstone Park and the Belt Mountains, collecting five tons of specimens which were shipped to the National Museum. Dr. E. O. Ulrich studied the lower Paleozoic deposits of the Mississippi Valley; Frank Springer explored two areas of Silurian rocks in the Ohio Valley for fossil echinoderms; and Dr. Edgar T. Wherry completed the areal mapping of various rocks in eastern Pennsylvania. From Celebes and Siberia were received large zoological collections. C. R. Shoemaker sent 5000 specimens of corals and other marine invertebrates from the Danish West Indies. Important botanical explorations of Brazil and Argentina were made by Dr. J. M. Rose. Under F. G. Cottrell, experts continued their efforts to clear fog by means of electrical precipitation. Prof. W. H. Holmes participated

in explorations made by the Carnegie Institution of Ancient Maya cities in Guatemala and Honduras. Prof. Anders Angeström reported on studies of nocturnal radiation made in Algeria, California, and in the Far North during the Arctic night.

The secretary of the Smithsonian Institution was appointed one of the vice-chairmen of the National Research Council, organized to further national preparedness. The *Smithsonian Annual Report* for 1915 contains in an appendix 22 papers on scientific progress, including: "The Utilization of Solar Energy," "Evidences of Primitive Life," "Heredity," and "Recent Developments in Telephony and Telegraphy." In 1916 the library of the institution contained more than 600,000 bound volumes and pamphlets. During the year 13,000 titles were added. Two important events were the second Pan-American Scientific Congress, on which a separate article will be found, and the Nineteenth International Congress of Americanists (December 27-31, 1915) attended by representatives of Austria, Chile, Cuba, Germany, Great Britain, Greece, Guatemala, Nicaragua, Peru, Russia, Sweden, and Uruguay, and by about 100 delegates from foreign and American learned societies and universities. John W. Foster, ex-Secretary of State, served as president of the congress. About 100 papers were presented on subjects relating to somatology, archaeology, ethnology, folklore, history, and linguistics. The Smithsonian Institution was represented by numerous exhibits at the Panama-Pacific and Panama-California expositions, receiving at the former a grand prize for the collective exhibit, and another grand prize also for the balloon pyrheliometer designed and exhibited by the Astrophysical Observatory. This is an instrument for measuring the heat of the sun by which records have been obtained at heights of over nine miles. For the activities of the Bureau of American Ethnology, see the article ANTHROPOLOGY. The International Exchange Service handled during the year 301,625 packages of governmental and other documents. The National Zoological Park reported more than 1,000,000 visitors in 1915-16. The United States Bureau of the International Catalogue of Scientific Literature published, as it has annually since 1901, a volume of references to scientific literature for each of 17 branches of science. The total references now number 369,509. In 1916 the Smithsonian Institution lost by death Dr. James B. Angell, who had been a member of the Board of Regents from 1877 to 1912. During the year James T. Lloyd, Congressman from Missouri, was appointed to the board.

**SNAITH, J. C.** See LITERATURE, ENGLISH AND AMERICAN, Fiction, English.

**SNUFF.** See TOBACCO.

**SNUFF POISONING.** Since 1914 25 cases of snuff poisoning have been observed at the Mayo Clinic. The use of "Copenhagen" snuff, according to Crispin, produces the most deleterious effects. The symptoms of excessive snuff taking are chronic headaches, indigestion, irritable heart action, shortness of breath, and impairment of the mental faculties even to the point of degeneracy. In some of the worst cases delusions and hallucinations occur. Crispin observes that the chronic snuff habitué does not seek medical aid for the cure of his habit, but because of impaired organic function. These

snuff chewers show ulceration and scarring of the mucous membrane of the mouth which possibly may later be the source of malignant growths.

**SOCCER.** See FOOTBALL.

**SOCIAL DEMOCRATIC PARTY.** See GERMANY, History.

**SOCIAL ECONOMICS.** During recent years it has become usual to speak of problems relating to the betterment of the condition of labor and the achievement of a more perfect distribution of wealth under the treatment of social economics. While economics has come to relate more specifically to problems of production and to theoretical analyses of value and of rates of wages and interest, social economics deals more specifically with the injurious effects of certain conditions of labor, such as low wages, long hours, night work of women, the employment of children at early ages or in trades dangerous to health or morals, and with proposals for increasing the welfare and intelligence of the social group by social legislation, an increased regulation of economic life and an enlargement of the opportunities of the less fortunate members of society. Fundamentally social economics seeks to centre attention not so much on the volume of exports or imports, the volume of trade or quantity of production, but upon problems of perfecting individual and social life. It lays stress upon the investigation of economic conditions with a view to discussing their causes and consequences, and it emphasizes education and legislation. Matter relating to this field will be found under the following headings: CHILD LABOR; LABOR; LABOR LEGISLATION; MINIMUM WAGE; OCCUPATIONAL DISEASES; OLD-AGE PENSIONS; PENSIONS FOR MOTHERS; PROSTITUTION; WOMEN IN INDUSTRY; and WORKMEN'S COMPENSATION.

**SOCIAL HYGIENE, BUREAU OF.** The Bureau of Social Hygiene was established by John D. Rockefeller, Jr., in New York in 1911 for "the study, amelioration, and presentation of those social conditions, crimes, and diseases which adversely affect the well-being of society, with special reference to prostitution and the evils associated therewith." Its first study was "Commercialized Prostitution in New York City" by George J. Kneeland (1912); and one of its first innovations was the establishment of a Laboratory of Social Hygiene in connection with the New York State Reformatory at Bedford

Hills, under the direction of Dr. Katherine B. Davis. In 1914 it issued *Prostitution in Europe*, by Abraham Flexner, giving a survey of the system in various countries. Mr. Flexner drew the conclusion that the established systems of regulation, segregation, and medical examinations are not only farcical but in all probability worse than useless. Its next study was conducted by Mr. Raymond B. Fosdick into the police systems of London, Berlin, Paris, Vienna, and other European cities, issued under the title *European Police Systems* (1915). This showed the immense superiority of European cities in the maintenance of integrity and efficiency and higher regard for the technical and professional character of police service in contrast to American inefficiency and irresponsibility. In 1915 was completed a second survey of "Commercialized Prostitution in New York City," giving comparisons with 1912. This indicated that under the administration of Mayor Mitchel and Commissioner Woods many of "the commercialized aspects, such as the sale of liquor, sale of clothes to inmates at exorbitant prices, the promiscuous and open methods of advertising and stimulating the trade, the excessive charges to inmates for board, the buying and selling of shares in houses, the activity of real estate agents in renting houses for immoral purposes at advanced rentals, the long hours of service demanded of inmates, and other features of exploitation have been practically eliminated." As the result of a further similar inquiry in 1916 the bureau reported that organized vice in New York had become "furtive, disorganized, precarious, unsuccessful"; and again chief credit was given to the Mayor and the Police Commissioner. During 1916 the bureau was conducting an examination into the police organizations and methods of American cities and the preparation of a report on prostitution in the United States. See also PROSTITUTION.

**SOCIAL HYGIENE ASSOCIATION, AMERICAN.** See PROSTITUTION.

**SOCIAL INSURANCE.** During the last six or eight years there has been a rather remarkable development of the idea that the community should take action to provide resources to meet the usual exigencies of industrial life. Social insurance was defined by Mr. Arthur Hunter in a November address before the Actuarial Society as "an endeavor to give a measure of social justice through assumption by the community of the burden of the loss which the individual sustains through accident, death, sickness, invalidity, unemployment, and old age." While the more well-to-do members of society suffer no loss of social position from such contingencies, these are all frequent causes of poverty, crime, and the perpetuation of ignorance and low standards of living among the working class. It is now widely recognized that the evil effects of these handicaps may be counteracted in large part by the application of the principle of insurance. Germany introduced such plans relating to sickness, invalidity, and old age in the eighties, but only in the last few years have practical steps been taken in England, Australasia, and America. In the United States the first line of attack was upon industrial accidents, (see WORKMEN'S COMPENSATION); of a similar nature has been the movement to protect workers from the evils of occupational diseases (q.v.). There has likewise been some agitation, but as yet in this country very

little in the way of practical effort, to combat the evils of unemployment (q.v.); while old-age pensions (q.v.) have thus far been provided in the United States only by private corporations or by governments for their own employees. The last three years, however, have seen the beginnings of serious agitation for the introduction of insurance against sickness and invalidity. For results of a public health survey, see WELFARE WORK.

The first definite step toward public health insurance in the United States was taken by the American Association for Labor Legislation in December, 1912, by the creation of a Social Insurance Committee. The object of this committee was to study plans of such insurance, to prepare proposed laws, and to stimulate discussion. It held a conference on the subject in 1913, drew up standards for legislation in 1914, and in 1915 drafted a law which was submitted to the legislatures of Massachusetts, New Jersey, and New York. Investigating commissions were established in California and Massachusetts to report in January, 1917. Moreover, a bill was introduced early in 1916 by the Socialist Congressman, Meyer London, providing for a commission to study social insurance in all its aspects. American experience with sickness insurance has been limited to a few voluntary schemes inaugurated by employers, to trade union funds, to a few workmen's benefit societies, and the fraternal orders. Commercial insurance companies have built up an enormous business insuring wage earners and their families for small death benefits. Such companies now reach nearly 25,000,000 insured persons, from whom they collect \$200,000,000 per year, of which \$80,000,000 is absorbed in administrative expenses. Not only is such insurance therefore extremely expensive, but it almost entirely fails to meet the contingencies for which sickness or health insurance is designed. In view of such facts and the agitation of the past few years the American Association of Manufacturers strongly approved the principle of compulsory health insurance. The attitude of organized labor toward such insurance has been either non-committal or slightly hostile owing to general opposition to the principle of compulsion. It is feared by labor leaders that health insurance might result in compulsory medical examinations, which would result in rejection of workmen below the standard. Moreover, those unions that maintain health benefits fear the disorganization of that feature of their activities.

**HEALTH INSURANCE STANDARDS.** The above mentioned standards of the American Association included the following: (1) Compulsory insurance with joint contributions from employer, employee, and the State; (2) all wage-earners receiving less than a fixed annual sum and regularly employed should be included in the compulsory plan, as usual, also casual and home workers so far as practicable; (3) a voluntary system should be provided for other wage-earners and other persons; (4) health insurance should cover a period of 26 weeks, but should be supplemented by invalidity insurance; (5) insurance funds should be mutual and local, or organized in large cities by trades with a federated bureau for medical relief; (6) invalidity insurance should be carried by funds covering a larger geographical area, but administered in close cooperation with local health funds; (7) both

health and invalidity insurance should include adequate medical service, supplies, nursing, and hospital care; (8) in addition cash benefits should be provided by both health and invalidity funds; and (9) such insurance should lead to a campaign of health preservation.

**PROPOSED LAW.** The following are the main features of the model law drawn up by the Committee on Social Insurance of the American Association for Labor Legislation. The experience of Great Britain showed that the better paid workers were very generally insured in voluntary friendly societies, but that the principle of compulsion must be adopted in order to secure the insurance of the more poorly paid. Moreover, compulsion reduced the administrative cost to 14 per cent of the receipts as compared with 37 per cent for societies collecting small premiums from house to house. Insurance embracing all workers, moreover, would avoid the necessity of a large reserve fund since every age group is continually recruited from lower ages. Consequently this law provided for the compulsory insurance of all persons employed at manual labor and all other employees receiving not more than \$100 a month. The law provides for an administrative body known as the Social Insurance Commission which is given authority to make special regulations for the insurance of home workers and casual employees. Benefits are provided for insured members for any sickness or accident or death not covered by workmen's compensation. Benefits include medical, nursing, and surgical attendance; medicines and surgical supplies; a cash benefit equal to one-third of the wages of the insured member while in a hospital; a weekly maternity benefit for insured women for a period of eight weeks, of which at least six must be subsequent to delivery; a funeral benefit not to exceed \$50; and medical and surgical attendance and medicines for dependent members of the families of the insured persons. Experience has shown that a difficult feature of health insurance is the regulation of the medical service. The act provides for a free choice of the following methods: (1) a panel of qualified physicians may be made up from whom the patient may have a free choice subject to the physician's right to refuse any specified call, and provided that no physician may have on his list of insured patients more than 500 families nor 1000 persons; (2) the insurance funds may maintain a number of salaried physicians with a reasonable freedom of choice for the insured; (3) the fund may maintain district medical officers for the treatment of all insured persons in prescribed areas; or (4) there may be a combination of the above methods. The purpose of limiting the number of insured patients is to prevent a repetition of English experience whereby in many communities a few physicians treated more than half of the insured population. The method of paying physicians so much per person per year, as is frequently done in fraternal organizations, has the defect of frequently leading to hurried negligent attendance. The salaried physician such as now employed by various railroads frequently prevents freedom of choice by the patient. The method of a stipulated payment per visit has been preferred by the medical profession and also secures for the patient more careful attention, but it imposes a heavier burden upon the insurance funds. It is believed that a combination of these methods may prove most satisfactory.

The act provides that employers and employees shall make equal contributions to the funds and that the State shall contribute one-fifth of the total. But it is stipulated that "if the earnings of the insured fall below \$9 a week" the share of the employer shall, as wages decrease from \$9, gradually increase from 40 to 80 per cent of the total, the share of the employee shall decrease from 40 to 0 per cent of the total, and the share of the State shall remain constant at 20 per cent. The act also provides that where several industries are included under the same fund, allowance shall be made for the sickness experience in different industries. This provision is designed to encourage sanitary precautions by employers.

There are three ways in which the insurance may be carried: a State fund, approved societies as in England, or district mutual associations as in Germany. Where the second plan is adopted it must be supplemented by a State organization in order to compel the compliance of persons not joining such an organization; but where the State fund or the district mutual associations are in vogue provision must be made for voluntary societies. The objections to a State fund are that its large size, the number of its officials, and its wide scope make it cumbersome, and open opportunities for favoritism either of industries, of individual plants, of localities, of insured persons, or of physicians. Moreover, it does not stimulate local pride nor enlist the intimate interest of either employer or employee. On the other hand, it makes possible the accumulation of wider experience, the exertion of powerful pressure on backward communities, greater ease in suppressing local contagions, better legislation, easier exercise of police power, and more complete standardization. The act provides that an approved society may be a labor union, benevolent or fraternal society, or a society especially organized for the purpose; none of these may be carried on for profit, all must be under the absolute control of their insured members, in sound financial condition, grant at least the minimum benefits provided in the act, have at least 500 insured members, and not endanger the existence of any local or trade fund. The act also provides that 10 per cent of the State contributions shall be paid into a fund known as the Guarantee Fund which shall be used to meet extraordinary losses such as those due to floods or epidemics. The act would create a State social insurance commission of three persons appointed by the Governor and having general oversight of the health insurance for the entire State. In addition there should be created a social insurance council of 12 members, 6 chosen by employer directors of local funds and 6 by employee directors of local funds.

**CONFERENCE ON SOCIAL INSURANCE.** Under the auspices of the International Association of Industrial Accident Boards and Commissions a conference on various branches of social insurance was held in Washington, D. C., December 5th to 9th. Two days' sessions were devoted to workmen's compensation, special attention being given to the merits and demerits of different forms of administration, the different methods of carrying such insurance, schedules of awards and lump sum settlements, rate-making, accident prevention, medical services, physical examinations, occupational diseases, and the special problems of the permanently disabled workers. The third

day was devoted entirely to sickness (health) benefits and insurance; present methods of providing such insurance through group insurance, trade unions, mutual benefit funds, and establishment funds of corporations, such as those of the International Harvester Company and the Pennsylvania Railroad Company, were discussed. In addition the main features of the proposed health insurance legislation were considered and special attention was given to sickness insurance for women and problems of medical services and benefits. Other features of social insurance discussed were: invalidity and old-age insurance; pensions and retirement allowances; maternity benefits and mothers' pensions; unemployment insurance; and savings banks and other forms of industrial insurance. The organization calling this conference is composed of official bodies responsible for the administration of compensation laws in the United States and Canada. Its secretary-treasurer is Royal Meeker, United States Commissioner of Labor Statistics, who is also chairman of its special committee on social insurance. The proceedings will be published as a special bulletin of the Bureau of Labor Statistics.

**SOCIALISM.** Efforts to restore an international organization continued throughout the year, but without success. After the outbreak of the war the central body of international socialism, that is to say, the International Socialist Bureau, with headquarters at Brussels, ceased its activities. Its chairman, the Belgian Socialist Emile Vandervelde, joined the Belgian defense ministry and the headquarters of the bureau were removed to The Hague, where it was under the direction of the Dutch Socialists. On July 30th and August 1st and 2nd a conference of neutral Socialists affiliated with the International Bureau, was held at The Hague, representing Denmark, the Netherlands, Sweden, the United States, and Argentina, and resolutions were passed laying the blame for the war on the capitalist system, advocating free trade, freedom of the seas, and democratic decentralization of power, and condemning proposals for a trade war after the war. As to the Socialists in the belligerent countries, they remained bound for the most part by their national ties. In September, 1915, the Zimmermann (Switzerland) conference, as noted in the preceding YEAR BOOK, had called together, for the first time since the war began, representatives from the fighting nations. A reunion of these representatives was held at Kienthal, Switzerland, April 24-30, 1916. Forty delegates were present, consisting mainly of the Italian official Socialists, who remained hostile to the war, and of Swiss and Russian Socialists. There were two German representatives, of whom one was editor of *Vorwärts*, and three French representatives, MM. Brizon, Blanc, and Raffin-Dugens.

Among the French Socialists such efforts for international unity met at first with little favor. At the Christmas congress of 1915 the Unified Socialists had repudiated the Zimmermann programme and the German terms of peace by a vote of 2736 against 76. But as time passed the minority gained strength, and at the meeting of the National Council on April 9th it had risen to about one-third. The proposal to renew the international organization, disrupted by the war, for the discussion of the terms of peace, and to admit thereto the German delegates was re-

jected by only 1996 against 960. The committee of the International Bureau at The Hague under the Dutch Socialist leader, M. Huysmans, had endeavored to bring this about. The Germans were ready to accept, but the Socialists of France, Great Britain, and Belgium refused. The Zimmermann-Kienthal element objected to making this measure conditional upon the consent of those three countries, thus shutting out the 27 other sections. They argued that the war was the result of the greed of the capitalist class and that all nations were equally guilty. On the other hand, representatives of the majority, for example, MM. Albert Thomas, Sembat, Renaudel, and Dubreilh, all declared energetically for national defense. In June the three Kienthal delegates voted in the Chamber against the war credit. At the next meeting of the National Council there was some further evidence of increased strength of the minority. There was also an accession to the minority element throughout the country, and entire federations in several of the departments and cities expressed the minority view. In the congress at Paris held at the close of the year, a resolution was passed calling upon the government to pursue a more vigorous policy, both military and civil, in the conduct of the war and to draw upon all the resources of the nation in order to insure the earliest possible conclusion. The Kienthal delegate offered a motion for the resumption of international relation between Socialists of all nations. This was defeated after a long debate and by only a small majority.

In Germany the division in the Social Democratic ranks, noted already in the preceding YEAR BOOK, led finally to a rupture. On Dec. 22, 1915, the minority had protested against any schemes for annexation or conquest, and in the vote of credit there were 20 opposed to the government, out of the 110 deputies—24 not voting. In January, 1916, 10 Socialist deputies in the Landtag expressed minority views, demanding the restoration of Belgium and declaring that the prolongation of the war would exasperate the working classes. In the Reichstag the crisis was reached on March 24th just after the Finance Minister's announcement of the success of the last loan, and his congratulatory remark that harmony prevailed throughout the country. Herr Haase, successor to Bebel and former president of the party in the Reichstag, declared that the Socialists detested the war as due to the greed of German capitalists aiming at world domination, and that in spite of military successes, nothing had really been gained. He believed the people longed for peace and were weary of the useless massacres. Great indignation was expressed by members of the majority, who emphatically declared their fidelity to the government, and Haase was expelled by a vote of 58 to 33, 7 not voting. The dissident group assumed the name of the Socialist Union of Labor. Nevertheless, the gain of the minority was not large, having risen from 14 at the beginning of the war to only 18 or 20, and it appeared to be offset to a certain extent by a closer union between the loyal majority and the government. For further details, including the case of Liebknecht, see GERMANY, paragraphs on *History*.

In Great Britain there was a split in the British Socialist party at its annual meeting in March, when the majority, having voted for se-

cret sessions, a considerable body, including Messrs. H. M. Hyndman and Dan Irving, withdrew, protesting against this action, and characterized the majority's programme as one of pernicious anti-national pacifism. The majority conference at which about 150 delegates were present declared the working classes were opposed to the war and in favor of immediate peace on the basis of freedom and autonomy for all nations and no territorial annexations. In Finland after June, 1916, the Socialists held the absolute majority in Parliament, having 103 out of the 200 seats. See ITALY and FRANCE, paragraphs on *History*.

For Socialism in the United States, see article UNITED STATES, *Presidential Campaign*.

**SOCIAL PSYCHOLOGY.** See PSYCHOLOGY, section so entitled.

**SOCIETIES.** Articles on societies will be found alphabetized under some characteristic word of the title.

**SOCIOLOGICAL CONGRESS, SOUTHERN.** See SOCIOLOGY.

**SOCIOLOGICAL SOCIETY, AMERICAN.** See SOCIOLOGY.

**SOCIOLOGY.** Other matters of sociological interest than those noted below will be found under SOCIAL ECONOMICS and the references given there; POLITICAL ECONOMY, and the list of cross references and bibliographies there noted; CHARITIES; LABOR; PENOLOGY; PROSTITUTION; and RELIEF FOR WAR VICTIMS.

**AMERICAN SOCIOLOGICAL SOCIETY.** This body held its 11th annual meeting at Columbus, Ohio, December 27th-29th. The general subject was "The Sociology of Rural Life." Its first session was held jointly with other scientific bodies, for which see POLITICAL ECONOMY. Among the addresses given at the various subsequent sessions were the following: "City versus Country" by Rev. Warren H. Wilson, of the Presbyterian Board of Home Missions; "Folk Depletion as a Cause of Rural Decline," by Prof. Edward A. Ross, University of Wisconsin; "The Non-Partisan League," by Charles E. Russell, editor of *Pearson's Magazine*; "The Mind of the Farmer," by Prof. E. R. Groves, New Hampshire College; "Social Control: Personal Ideals of Country Boys and Girls," by Prof. Mary E. Sweeney, University of Kentucky; "The Development of Rural Leadership," by Prof. G. Walter Fiske, Oberlin College; "Social Aspects of American Land Problems," by Prof. Paul L. Vogt, Ohio State University; "Rural Credits Law," by Dr. C. W. Thompson, United States Bureau of Rural Organization; "The Consolidated School as a Community Centre," by Rev. C. O. Gill, Secretary of the Commission on Church and Country Life; "Coöperation and the Community Spirit," by Prof. A. D. Wilson, University of Minnesota; "Rural Surveys," by Dr. C. W. Thompson; and "The Scope and Methods of Instruction in Rural Sociology," by Prof. John M. Gillette, University of North Dakota.

**SOUTHERN SOCIOLOGICAL CONGRESS** held its fifth annual meeting at New Orleans April 12th-16th. "For health, justice, and coöperation" was the slogan of the meeting, and furnished the chief topics of discussion. About 600 delegates and social workers were present. For the last two years, health has been the chief interest of the conference, but the plan of work for the next few years includes sections on Home; Church and Social Service; Education and Ad-

ministration of Law; Industrial Relations and Temperance; Race Relations and Juvenile Life; Country and City. Health campaigns and social surveys are planned in 10 small cities in as many different States for the coming year. A further new feature of the congress is a monthly bulletin of its work.

One of the most interesting speeches of the conference was one on lynching given by U. D. Weatherford, field executive secretary of Robert E. Lee Hall of the Blue Ridge Association. Mr. Weatherford stated that there had been no appreciable diminution in lynching in the South since 1879 when the return to stable government was made. He gave statistics showing that between 1882 and 1903 there were 3337 lynchings of which 2060 were negroes, 1169 native whites, and 108 foreign whites. Only 34 per cent of the lynchings of the colored men were for assault on white women. As means of ridding the South of the mob or lynching spirit, Mr. Weatherford suggested prompt and just court procedure against criminals; campaign against white men who seduce negro girls; preaching by negro leaders against negroes guilty of assault; union of white and colored to bring every offender to justice; teaching the younger generation to respect the law and to regard personality as sacred. Extension conferences of the congress were arranged for at Winston-Salem, N. C., September 19th; Farmville, Va., September 26th; and Bristol, Tenn., October 3rd. C. H. Brough, Governor-elect of Arkansas, was made president of the congress for 1917.

**Bibliography.** Among the year's books may be mentioned the following: E. W. Burgess, *The Function of Socialization in Social Evolution*; E. T. Towne, *Social Problems*; A. O. Taylor, *Persistent Public Problems*; A. B. Wolfe, *Readings in Social Problems*; G. W. Nasmyth, *Social Progress and the Darwinian Theory*; A. Christensen, *Politics and Crowd-Morality*; W. Trotter, *Instincts of the Herd in Peace and War*; L. F. Post, *Ethics of Democracy*; Edwin A. Kirkpatrick, *Fundamentals of Sociology*—a text by a psychologist and educator for special use in normal schools; John M. Gillette, *Sociology*—a very elementary treatise in the National Social Science Series published by A. C. McClurg & Co.; R. W. Sellars, *The Next Step in Democracy*—a stimulating work written from the viewpoint of philosophical socialism; J. A. Bigham (Ed.), *Select Discussions of Race Problems. A Collection of Papers of Especial Use in the Study of Negro American Problems*; L. M. Bristol, *Social Adaptation. A study in the development of the doctrine of adaptation as a theory of social progress*; H. K. Rowe, *Society, Its Origin and Development*; Sidney Webb, *Towards Social Democracy?*; Hutton Webster, *Rest Days*; George W. Crile, *Man—An Adaptive Mechanism*; G. O. **SODIUM.** See CHEMISTRY, INDUSTRIAL.

**SOILS.** Agricultural conditions created by the European war accentuated as never before the necessity for conservation and intensive utilization of soil and fertilizer resources. Under such conditions a high level of production must be maintained with a relative shortage of certain kinds and high prices of all kinds of fertilizers. As a result there was a marked tendency to bring under cultivation lands which had not been exhausted by previous or continuous culture and to adopt methods of management which utilized more fully the accumulated fertility of soils which had been under intensive fertilization in past years. This emphasized the importance of a better knowledge of the possibilities and crop adaptations of soils and of the best practical means of supplementing the soil fertility. This meant greater use of the results of scientific investigation for the practical purpose of maintaining and increasing the productivity of the soil, an outstanding feature of the present agricultural situation, especially in Germany but also in other European countries as well as in the United States. European countries, however, had not been able to continue, under the abnormal conditions prevailing, the systematic scientific studies of soils pursued in previous years. They had rather been obliged to draw upon the reserves of scientific information furnished by these previous investigations. Therefore, while the practical applications of the results of such investigations were being more largely used in soil management than ever before, the more scientific work had practically been at a standstill in many countries.

In the United States, on the other hand, soil investigation as well as the practical application of scientific knowledge to soil management were very active during the past year. The systematic survey of the agricultural lands of the United States by the Bureau of Soils of the United States Department of Agriculture, cooperating with several of the State agricultural experiment stations, geological surveys, and departments of agriculture, which is so fundamentally necessary to the intelligent and profitable utilization of the soils in crop production, continued to be actively prosecuted. During the fiscal year ended June 30, 1916, detailed soil survey work was carried on on 75 different areas in 32 States. The total area covered by detailed surveys was 38,671 square miles or 24,749,400 acres. Reconnaissance surveys were made in two States and covered 8334 square miles. The total area which had been covered by detailed surveys up to the date named was 408,600 square miles or 261,504,000 acres, and by reconnaissance surveys 484,312 square miles or 309,959,680 acres. Typical soil areas in every State had been surveyed and an adequate basis had been laid for a more thorough and intensive study of the rela-

tion and better adaptation of the soils to crops. During 1915 and 1916 such a study of trucking soils was in progress, and a report on the trucking soils of certain typical areas in New Jersey was made. A similar study of soils in the vicinity of Norfolk, Virginia, was in progress.

As already intimated, a great impetus was given since the European war began to a comprehensive educational campaign with a view of increasing the output of agricultural products. In the European countries the purpose of this had been to increase the yield from the present acreage rather than to increase the area under crop. In the United States and countries similarly situated as regards lands available for culture, the more important consideration had been to increase the products per man. One of the most important and influential agencies engaged in this educational work in the United States was the system of cooperative extension maintained by the State agricultural colleges and the United States Department of Agriculture working especially through the county agents in about 1300 agricultural counties. These agents were actively teaching farmers by word of mouth, demonstration, and printed matter better methods of soil management. They recognized that the maintenance of soil fertility was a universal problem and fundamental to permanent agricultural prosperity, and had given it a large place in their programme for improved and permanent agriculture. They were attacking the problem of soil improvement from almost every angle to meet local conditions. Special emphasis was being placed on the need of lime and humus because these had been found to be two of the most important and widespread needs of the soils of the United States.

The question of soil acidity and the best means of overcoming it occupied a large place in recent investigations on soils. Some progress was made in determining the nature of soil acidity, namely, that it could not be accounted for by colloid absorption phenomena, but is largely, if not exclusively, due to the actual presence of true acids (mineral and organic), acid silicates, etc.; in other words, that it was due to an excess of hydrogen ions and was probably susceptible of accurate measurement by electrical and other methods. Experiments were reported which indicated that the acidity of soils is not increased by continued use of acid phosphate, but may be increased by the formation of acid iron and aluminum compounds by the continued application of ammonium sulphate.

The subject of soil toxicity, so closely associated with that of acidity, also received considerable attention. Investigations were reported which showed that many of the substances which had been shown to be highly toxic to plants in water cultures were either non-toxic or ultimately favorable to plant growth in soils even when used in large amounts.

Further light was thrown on the use of sterilization as a means of correcting unfavorable conditions in soils, confirming the previous conclusion that this method of soil treatment has practical value, particularly in connection with greenhouse soils. If not properly done, however, the process may produce toxic substances in the soil.

Some progress was made in the bacteriological study of soils, although investigations were re-

ported which cast doubt upon the reliability of certain conventional and widely used methods as means of judging of the progress, rate, and extent of bacteriological changes in the soil, such as ammonification and nitrification. On the other hand, investigations were reported which indicated that laboratory tests of such bacterial activities may show quite accurately the relative crop-producing power of soils. The stimulating effect of manure and of small amounts of arsenic on these bacterial activities was shown in investigations reported during the year. See also FERTILIZERS.

**Bibliography.** A new American periodical, *Soil Science*, devoted entirely to soil investigation, was started during the year. A new edition of that most complete compilation of data of fundamental importance in the study of soils, *Data of Geochemistry*, by F. W. Clarke (U. S. Geological Survey *Bulletin 616*), was issued during the year. Among the books that appeared were *The Spirit of the Soil*, by G. D. Knox (London, 1916), and a revised edition of *Le Sol et les Labours*, by P. Difiloth (Paris, 1916).

**SOLDIER'S HEART.** "The irritable heart of soldiers," was noted by American physicians during the Civil War. A similar phenomenon is now described as a frequent cause of disability among the fighting forces in the great European war. The important symptoms are a feeling of exhaustion, breathlessness on slight exertion, pain over the region of the heart, a rapid pulse, increasing in frequency during exercise, vasomotor instability, and sometimes nervous symptoms with high blood pressure. The sufferer is depressed and irritable. Examination of the heart shows a slight increase in size, and systolic murmurs, irregularly distributed, are heard. Such symptoms are not infrequently observed in civil life among persons who have endured prolonged mental or physical strain with insufficient sleep, and in those recovering from exhausting disease such as grippe or typhoid fever, or during recovery from a severe surgical operation. Sir James Mackenzie, an authority on the heart, believes that the malady is not a true cardiac disease, but that it depends on injury to the central nervous system and in many cases upon bacterial and toxic influences. All observers agree that there is a psychic factor present, and in the treatment a cheerful atmosphere and moderate exercise, alternating with complete rest, are most beneficial. In spite of all treatment, however, recovery is apt to be slow and in the opinion of many of the army physicians, the heart is permanently damaged in a considerable proportion of cases.

**SOLMS-LAUBACH, HERMANN, COUNT.** A German botanist, died at Strassburg in 1916. He was born in 1842, at Laubach, and was educated at the universities of Berlin, Giessen, and Freiburg. He was appointed professor extraordinary at Strassburg in 1872, professor of botany and director of the Botanical Garden at Göttingen in 1879, and to a similar position at Strassburg in 1888. His publications include: "Ueber den Bau und die Entwickelung der Ernährungsorgane parasitischer Phanerogamen," in the *Jahrbücher für wissenschaftliche Botanik* (1867-68); *Corallina* (1881); *Herkunft, Domestikation und Verbreitung des gewöhnlichen Feigenbaums* (1882); *Die Geschlechterdifferenzierung bei den*

*Feigenbäumen* (1885); *Einleitung in die Paläophytologie* (1887); *Die leitenden Gesichtspunkte einer allgemeinen Pflanzengeographie* (1905).

#### SOLOMON ISLANDS PROTECTORATE.

Part of the Solomon Islands, including Bougainville and Buka, are German; the remainder of the group to the southeast of these constitute a British protectorate. Estimated area of the protectorate, 14,800 square miles. Estimated population: natives, about 150,000; whites (1914), 860. The British resident-commissioner has his headquarters at Tulagi.

**SOMALI COAST.** See FRENCH SOMALI COAST.

**SOMALILAND, ITALIAN.** See ITALIAN SOMALILAND.

**SOMALILAND PROTECTORATE.** A British protectorate on the Gulf of Aden. Area, about 68,000 square miles; population (1911), 302,859, largely nomad Mohammedan tribes. Berbera, Bulhar, and Zeila are the chief ports.

**SOMME, BATTLE OF THE.** See MILITARY PROGRESS; WAR OF THE NATIONS.

**SOOYSMITH, CHARLES.** An American civil engineer, died in New York City June 1, 1916. He was born in Buffalo, N. Y., in 1856, graduated from Rensselaer Polytechnic Institute in 1876, and then spent two years studying in Europe at the Polytechnicum, Dresden, and elsewhere. For a short time he was connected with the Santa Fé Railroad, and from 1884 to 1900 he practiced as a civil engineer, being president of SooySmith and Company, contracting engineers. He built railway bridges in Iowa, Nebraska, Maryland, and Kentucky, and served as chief engineer of the Central Bridge over the Harlem River in New York. With his father, William SooySmith (q.v.), he developed the pneumatic caisson method of sinking foundations, applying it in the construction of several high buildings in New York. For the freezing process, as used in subaqueous work, he obtained numerous patents. Mr. SooySmith served as expert in the construction of the New York subways, and shortly before his death was prominently identified with the building of the Belmont-McDonald rapid transit tunnel under the East River.

**SOOYSMITH, WILLIAM.** An American civil engineer, died March 4, 1916, at Medford, Ore. He was born at Tarlton, Ohio, in 1830, took the degrees of A.B. and A.M. at Ohio University, and graduated from the United States Military Academy in 1853. After a year in the army he resigned to take up engineering work. At the opening of the Civil War he was chief engineer in the building of an iron bridge across the Savannah River for the Savannah and Charleston Railroad Company. Before he was retired in 1864, because incapacitated by rheumatism, Mr. SooySmith had risen to the rank of brigadier-general, U. S. A. Subsequently he returned to the practice of his profession in Chicago, and became known for important bridge, lighthouse, and building foundation work. At Glasgow, Mo., he built the first all-steel railway bridge in the world, and he devoted himself to perfecting the pneumatic caisson process for laying bridge foundations, and for excavating tunnels. His work in making possible the erection of high steel buildings in Chicago, by overcoming great foundation difficulties, was especially notable. He undertook to excavate the first Hudson River tunnel, at New York City,

but, without the protection of the tunneling shield, which was invented several years later, an accident occurred, and General SooySmith sold his interest to his son, Charles SooySmith (q.v.), who had collaborated with him in developing the freezing process for subaqueous work.

**SORAUER, PAUL.** A German botanist, died at Berlin, in 1916. He was born at Breslau in 1839, and was educated at the University of Berlin. In 1871 he was appointed director of the experiment station at the Proskau Pomological Institute, and became professor in 1892. Next year he went to Berlin as secretary of the International Phytopathological Commission. He became widely known for his investigations in plant diseases, and founded the *Zeitschrift für Pflanzenkrankheiten* (Stuttgart), besides publishing *Das Handbuch der Pflanzenkrankheiten* (1886; 3rd ed., with Lindau and Reh, 1905-13; Eng. trans., *Manual of Plant Diseases*, 3 vols., 1915 et seq.); *Die Obstbaumkrankheiten* (1879); *Die Schäden der einheimischen Kulturpflanzen durch Schmarotzer, etc.* (1888); *Populäre Pflanzenphysiologie* (1891; Eng. trans., *Popular Treatise on the Physiology of Plants*, (1895); *Pflanzenschutz* (with Frank, 1896; 5th ed., with Röhrig, 1910).

**SOUTH, UNIVERSITY OF THE.** A Protestant Episcopal institution for the education of men at Sewanee, Tenn. It was founded in 1857. In the fall of 1916 there were 118 in the university and 138 in the preparatory school, the Sewanee Military Academy. The faculty of the university numbered 26 and of the military academy 8. The productive funds of the institution amounted to \$395,650 and the total income from all sources to \$119,915. In June the library contained 36,721 volumes. President, Rt. Rev. Albion Williamson Knight.

**SOUTH AFRICA, UNION OF.** A British colony, consisting of four provinces, forming a legislative union under a governor-general. Pretoria (29,618 inhabitants) is the capital, and Cape Town (29,863) the seat of the legislature.

**AREA AND POPULATION.** The total area is 473,100 square miles and the population in 1911 was 5,973,394. A table giving the details will be found in the 1915 YEAR BOOK. Total number of natives, 4,019,006; other colored, 678,146. European birth and death rates: Cape Province, 30,711 and 10,834 per 1000 (colored, 33,000 and 21,349); Transvaal, 36.78 and 11.92; Orange Free State, 29 and 8. Cape Town, the seat of the Union parliament, had, with suburbs, 161,759 inhabitants in 1911 (of whom 85,442 white); Johannesburg, 237,104 (119,953); Pretoria, 57,674 (35,942); Durban, 89,998 (34,880); Port Elizabeth, 37,063 (20,007); Kimberley and Beaconfield, 44,433 (17,507); Germiston, 54,325 (15,579); East London, 24,606 (14,899); Pietermaritzburg, 30,555 (14,737); Bloemfontein, 26,925 (14,720); Krugersdorp, 55,144 (13,132); Boksburg, 43,628 (11,529); Benoni, 32,560 (8639).

**MINING.** The extensive mineral deposits constitute the chief source of the country's wealth. In the output of gold and diamonds the Union leads the world. Other important products are coal, copper, tin, asbestos, graphite, magnesite, zinc, lime, salt, etc. Exports of tin and copper ores, 1914, were valued at £311,391 and £692,355 respectively. Value of other base min-

erals produced in 1914, £639,288. Value of total mineral output in 1914, £45,366,224.

**Gold.** In December, 1914, there were employed in the gold mines 21,975 white and 178,367 colored laborers. The total output for 1911 was £35,049,041 (world's output for the year, £97,250,000), of which the Transvaal furnished £35,041,485 (8,249,461 fine ounces). The Witwatersrand mines contributed £33,599,689 to the Transvaal output. The value of the Transvaal output for 1912 was £38,757,560.

The table below shows the output by provinces in 1913 and 1914:

	Fine ozs.		Pounds Sterling	
	1913	1914	1913	1914

\* Tons of 2000 pounds.

**FORESTS.** The total area reserved for forest purposes in the Union of South Africa is approximately 914,598 morgen (1,930,818 acres). The timbered area is approximately 400,000 acres, of which some 63,498 acres consist of artificial forests termed plantations. The attention of the government has been given to the economical and systematic working of the crown forests. The Union is divided into seven conservancies, each controlled by a conservator of forests, stationed at Cape Town, King William's Town, Knysna, Umtata, Pretoria, Maritzburg, and Bloemfontein respectively, who is directly responsible to the chief conservator of forests for the Union at Pretoria. The present annual importation of timber into the Union is about 14,000,000 cubic feet, mostly pine, derived from Europe and America, the balance being hard wood from Australia. There is at present a large importation of hard wood sleepers. Expenditure on forests for financial year 1913-14, £120,827, cash revenue £52,796; value of gratis issues from forest estate, £26,371; total revenue, £79,167. Timber removals from

forest estate during 1913-14 aggregated 1,295,406 cubic feet.

**OTHER INDUSTRIES.** Agriculture, stock raising, and dairying are practiced. Ostrich feathers and wool are important products for export.

**COMMERCE.** By proclamation dated Aug. 5, 1914, the export of foodstuffs, except by special permit, has been prohibited. In a communication of Aug. 14, 1914, it is specified that: (1) the export of cereal foodstuffs to over-sea countries (except to ports in Great Britain) is absolutely prohibited; (2) the export of cereals for Great Britain is authorized by special permission; (3) the export of all kinds of foodstuffs for consumption in Basutoland, Swaziland, Bechuanaland Protectorate, Rhodesia, Mozambique Province, and the Congo is permitted.

By orders dated Oct. 15 and Dec. 29, 1915, Feb. 1, March 8, and April 5, 1916, the export of foodstuffs, fodder, and all oleaginous seeds is prohibited except with the permission of the minister of railways and harbors. The export of raw cotton is also prohibited except with the permission of the commissioner of customs and excise. The restrictions apply to all destinations.

The total value of the imports and exports in the trade of the Union, exclusive of specie, is shown in the table below, for three comparative years:

	1913	1913	1914
Imports .....	238,838,960	241,828,841	235,354,971
Exports .....	62,974,210	66,569,364	39,933,612

A table of the principal imports for home consumption, and exports of domestic produce, in the 1914 trade, follows, values in thousands of pounds sterling:

Imports	£1000	Exports	£1000
Foodstuffs .....	5,976	Gold .....	20,544
Cotton mfrs. ....	2,861	Diamonds .....	5,813
Apparel .....	2,286	Wool .....	4,288
Hardware .....	1,382	Feathers .....	1,343
Leather mfrs. ....	1,406	Coal .....	1,248
Machinery .....	2,511	Hides and skins ..	1,572
Haberdashery .....	1,078	Mohair .....	834
Iron and steel .....	1,047	Copper .....	700
Wood, etc. ....	893	Bark .....	286
Drugs, etc. ....	886	Tin ore .....	458
Oils .....	805	Whale oil .....	104
Furniture .....	458	Fish .....	112
Glycerine .....	432	Fruit .....	97
Woolen mfrs. ....	689	Fodder .....	48

The United Kingdom contributed 56.88 per cent of the imports.

During 1914, 4008 vessels of 11,624,577 tons net entered, and 4009 vessels of 11,610,642 tons net cleared.

**COMMUNICATIONS.** Prior to union, which took effect in May, 1910, the state railways of the several colonies now composing the Union were operated by the separate governments. In May, 1910, the government lines were merged into one system, the South African Railways, under the control of the Union government. The total open mileage of this system at the end of 1914 was 8486 miles (Cape 3705, Orange Free State 1180, Transvaal 2436, and Natal 1164), of which 7978 miles are 3 ft. 6 in. gauge, and 508 miles 2 ft. gauge.

The capital expenditure on government railways up to Dec. 31, 1914, amounted to £69,804,581 plus £14,973,184 in respect of rolling stock,

or a total of £84,777,765. (This does not include £1,420,585 spent during the year on the construction of new lines.) The gross earnings for 1914 were £11,573,204 and the net loss after payment of interest £191,024. Working expenditure (including renewals) amounted to £8,840,208 or 76.4 per cent of the gross revenue, as compared with £8,964,690 or 72.4 per cent of the gross revenue in the preceding year.

**FINANCE AND GOVERNMENT.** In the table below are shown revenue and expenditure for three comparative years (1914-15 estimate):

	1911-12	1913-14	1914-15
Revenue .....	217,869,080	217,268,178	217,968,250
Expenditure ..	16,547,380	17,662,014	18,312,194

The total public debt stood, March 31, 1914, at £126,296,250.

The act constituting the Union provides for the appointment by the sovereign of a governor-general, who with the executive council (of which the members are chosen and summoned by him), administers the executive government of the Union as the governor-general in council. Departments of state are established by the governor-general in council, the governor-general appointing not more than 10 officers to administer them. Such officers are king's ministers of state for the Union and members of the executive council.

The senate consists of forty members. For 10 years after the establishment of the Union eight members are nominated by the governor-general in council and 32 are elected, eight for each province. The first election was made prior to the establishment of the Union by the two houses of each of the colonial legislatures sitting as one body, and a vacancy will be filled by the choice of the provincial council in respect of whose province a vacancy occurs.

The house of assembly consists of 130 elected members, 51 of whom represent the Cape of Good Hope, 17 Natal, 45 Transvaal, and 17 the Orange Free State. Members of both houses must be British subjects of European descent.

## HISTORY

**PARLIAMENTARY SESSION.** The strength of parties after the general election for the second Union Parliament was as follows: South African party, 54; Unionist, 40; Nationalist, 27; Independent, 6; Labor, 3. The government depended on the support of the Unionists who had pledged themselves to sustain General Botha till the end of the war. During the first session of Parliament (December, 1915-June, 1916) 48 bills were passed of which 20 were financial. Among the others may be mentioned several important consolidating measures designed to unify the laws of the separate provinces, on the subjects of insolvency, patents, trademarks, railway regulation and management, and mental disorders; three measures which aimed to settle the university question; and finally a trading with the enemy act framed on the same lines as that of the mother country (see GREAT BRITAIN, *History*), which was not carried till near the end of the session and only after sharp controversy. The South African party continued loyal to the Botha government, though there were signs of some wavering among a few of its members. The Nationalists con-

tinued their vigorous opposition, and were reinforced on the war issue by the small Labor vote. Nationalists attacked especially the Trading with the Enemy bill, arguing that it went too far, that it would ruin many worthy German settlers, cause hardship and race hatred, and unduly subordinated South African to Imperial interests. The Nationalists also continued steadily to oppose every project for aiding the Empire either with men or money for the prosecution of the war, which, they argued, did not concern South Africa.

**WAR CONTRIBUTIONS.** War expenditure since the beginning of the war has been defrayed by loan. Estimates of war expenditures from August, 1914, to March, 1917, were £26,693,000, including cost of suppressing the rebellion, of the German Southwest African expedition, of the equipment of the German East African contingent, of internment camps, and of garrisoning the conquered territory. As regards men, it was estimated toward the close of 1916 that South Africa had placed in the field about 60,000 men. The natives had been largely employed on work connected with the war. In the German West African campaign 40,000 were engaged in building military railways and other operations, and toward the close of the year a contingent of 10,000 Kaffirs was being organized for work on the harbors of France, whither a body of 1000 had already been dispatched. Among the whites there were signs at the close of the year that voluntary recruiting had reached its limit.

**PARTY ISSUES.** Two important party congresses held after the parliamentary session brought out sharply the conflicting views. General Botha at a congress of his supporters at Bloemfontein on August 23rd renewed his expressions of confidence in ultimate victory and pointed to the satisfactory progress in German East Africa, but referred to a new movement to stir up a rebellion. Its ringleaders had made overtures to General de Wet, who promptly reported the movement to the government. General Hertzog and his followers met at Pretoria on the same date. The former renewed his attack on imperialism, declaring that the position of Generals Botha and Smuts that England's wars were necessarily the wars of all portions of the Empire was the gravest of errors.

**SOUTH AMERICA.** See various South American countries; also **EXPLORATION, South America.**

**SOUTH AUSTRALIA.** A state of the Commonwealth of Australia, occupying the central and southern part of the continent between Western Australia on the west and Queensland, New South Wales, and Victoria on the east. The estimated area is 380,070 square miles, which is about 12.8 per cent of the area of the Commonwealth. The population according to the census of 1911 was 408,558 (207,358 males, 201,200 females), exclusive of full-blooded aboriginals. The increase per cent in the decade 1901-11 was 14.01, in 1891-1901 13.57, in 1881-91 14.15. Estimated population June 30, 1915, 438,195. The capital is Adelaide; its population at the 1911 census was 32,981; including suburbs, 189,646; estimate in 1914, 205,443.

The executive authority rests with a governor, who is appointed by the crown and is assisted by a responsible ministry. The Parliament consists of two chambers, the Legislative

Council and the House of Assembly, both elective; the former consists of 20 members, the latter of 46 members chosen for three years. South Australia was the first of the states to grant woman suffrage, the franchise being exercised for the first time at the House of Assembly election on April 25, 1896. The Governor in 1916 (from March, 1914) was Lieut.-Col. Sir Henry Lionel Galway, K.C.M.G., D.S.O.; premier, treasurer, and minister of education, Crawford Vaughan. See **AUSTRALIA**; also **AGRICULTURE.**

**SOUTH CAROLINA. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 1,634,340. The population in 1910 was 1,515,400.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16 were as follows:

		<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Corn	1916	2,065,000	32,008,000	\$86,189,000
	1915	2,180,000	35,145,000	80,576,000
Wheat	1916	210,000	2,226,000	4,207,000
	1915	225,000	2,430,000	3,353,000
Oats	1916	500,000	9,000,000	7,200,000
	1915	525,000	9,975,000	6,683,000
Rice	1916	3,500	49,000	44,000
	1915	3,700	90,000	81,000
Potatoes	1916	10,000	750,000	1,312,000
	1915	11,000	880,000	1,012,000
Hay	1916	250,000	a 325,000	5,428,000
	1915	220,000	286,000	4,462,000
Tobacco	1916	89,000	b 28,280,000	2,839,000
	1915	65,000	37,700,000	2,639,000
Cotton	1916	2,834,000	c 920,000	86,085,000
	1915	2,516,000	1,134,000	61,156,000
Rye	1916	5,000	49,000	91,000
	1915	3,000	30,000	45,000

a Tons. b Pounds. c Bales of 500 pounds gross weight.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned, in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments	1,854	1,885
Average number of wage earners	73,046	71,914
Capital invested	\$173,221,000	\$203,211,000
Wages	20,361,000	24,173,000
The value of materials used	66,851,000	91,009,000
The value of products	113,236,000	138,891,000

**TRANSPORTATION.** The total railway mileage of the State in 1915, the latest date for which statistics are available, was 4466. The railways having the longest mileage were the Southern, 1122; Atlantic Coast Line, 886; Sea Board Air Line, 362.

**EDUCATION.** The total enrollment in the public schools of the State in 1915 was as follows: White 180,316, negro 192,525, or a total of 372,841. The average daily attendance in schools for white children was 123,118, for the negro children 127,567, or a total of 250,685. The total number of white teachers was 5072, and of negro teachers 2998, or a total of 8070. The total school revenue for the year was \$4,039,382, and the total expenditure \$3,295,506. The average yearly salary paid to male teachers was \$594.72, to women teachers \$340.54; to negro male teachers \$127.77, and to women \$106.83.

**FINANCE.** The total receipts for the fiscal

year 1915, the latest for which figures are available, were \$3,645,363. On Dec. 31, 1914, there was a balance of \$352,718. The total expenditures for the year amounted to \$3,447,423, leaving a balance on Dec. 31, 1915, of \$550,658.

**CHARITIES AND CORRECTIONS.** The State charitable and correctional institutions include the State Hospital for the Insane, Confederate Infirmary of South Carolina, South Carolina School for the Deaf and Dumb, State Penitentiary at Columbia, State Reformatory for Negro Boys at Columbia, and State Farm at Boykin. There is also an industrial school in Florence and a State tuberculosis hospital, but the latter is not a charitable institution. A State Board of Charities and Corrections was created in 1915 and its first report was issued in 1916. It has general charge over the institutions noted above, as well as care of poor and dependent children in the various counties.

**POLITICS AND GOVERNMENT.** The renomination and reelection of Gov. Richard I. Manning were the outstanding events of the year in South Carolina politics. The primary nomination, of course, was of chief interest, as the candidate of the Democratic party in recent years has had almost no opposition at the general election. This year the situation was somewhat complicated by talk of a bolt, which, however, amounted to little when the ballots were counted. From the beginning the Democratic campaign promised to assume its usual violence, and the promise was well fulfilled before the primary nominees were declared. In the race for Governor were Richard I. Manning, the incumbent; Robert A. Cooper, who had been a candidate two years before and had been kept out of the second race by a few hundred votes; and Cole L. Blease, for two terms Governor and in 1914 an unsuccessful primary candidate against United States Senator E. D. Smith. Besides there were two nominal entrants—John T. Duncan and John M. DesChamps. The vote of the two last named was negligible. The race narrowed down to three men—Governor Manning and Messrs. Cooper and Blease. Mr. Blease, as in previous campaigns, violently attacked his opponents and the newspapers which opposed him. Governor Manning ran on his record as a law-enforcing Governor and business executive, and Mr. Cooper on a similar platform of law enforcement and economy. Under the South Carolina primary system, the nominee must receive a majority of all the votes cast. If no candidate receives a majority, the two highest in the first primary enter a second primary two weeks after the first, the high man in the run-off primary being given the nomination. In the first primary—held August 29th—Blease ran more than 20,000 votes ahead of Governor Manning, the second man, and lacked but 5000 of having a majority. Between the first and second primaries, however, the Manning forces, with the indorsement of Mr. Cooper, did an amazing amount of personal work, and the second primary saw the Governor nominated for a second term by a majority of about 4700 votes, the count standing: Manning, 71,459; Blease, 66,791. The Blease forces made many charges of fraud, intimidation, and the use of "whiskey and money," but entered no contest. After Governor Manning had been declared the nominee certain friends of Mr. Blease advised a bolt in the general election,

Y. B. 16—22.

claiming they had been defrauded, but the movement failed, Blease receiving only 1089 votes to 60,405 for Governor Manning. J. C. Gibbs, Socialist candidate, received 162, and John M. Cantey, Progressive, 35. With Governor Manning was elected the entire Democratic State ticket, it having no opposition. All members of both branches of the general assembly are Democrats, as is the entire membership of the bench, both Supreme Court and Circuit Court. The judges are chosen by the Legislature.

In the national campaign South Carolina was interested solely in the vote in other States, the result in this State being a foregone conclusion. However, the State cast an unusually heavy vote, giving Wilson a majority of about 60,000. The vote for presidential electors was: Democratic, 61,846; Republican, 1550; Progressive Republican (a wing of the Republican party), 258; Progressive, 162; Socialist, 135.

**LEGISLATION.** The Legislature met in 1916, and enacted many important measures. A record of some of these is given below:

A measure was passed requiring the State Charities Board to investigate the financial condition of persons holding scholarships in the State higher educational institutions. A commission was created to report on a State system of rural credits. Provision was made for the government of the militia to conform to the United States requirements. It was made a misdemeanor to sell any formula or distilling apparatus for making intoxicating beverages, except those containing less than 2 per cent alcohol, or preparations for medicinal purposes. Certain corporations are required to pay wages weekly. The hours of employees on interurban railways are limited to 10 daily. The age at which children may work in factories, etc., was raised from 12 to 14 years. The laws relating to insurance were amended, as were also the measures relating to public utilities.

**STATE OFFICERS.** Governor, Richard I. Manning; Lieutenant-Governor, Andrew J. Bethea; Secretary of State, W. Banks Dove; Attorney-General, Thomas H. Peoples; Treasurer, S. T. Carter; Comptroller, C. W. Sawyer; Superintendent of Education, John E. Swearingin; Adjutant-General, W. W. Moore; Commissioner of Agriculture, E. J. Watson; Commissioner of Insurance, F. H. McMaster—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Eugene B. Gary; Justices, D. E. Hydrick, R. C. Watts, Thomas B. Fraser, and George W. Gage; Clerk, U. R. Brooks.

**STATE LEGISLATURE.** Wholly Democratic.

**SOUTH CAROLINA, UNIVERSITY OF.** A non-sectarian co-educational institution. It was opened in 1805. Since 1878 it has been divided into two branches, the South Carolina College at Columbia, S. C., and the Clafin College for Negroes at Orangeburg. There were 475 students enrolled in the fall of 1916 and the faculty numbered 42. Dr. A. N. Lucian was appointed associate professor of physics and H. E. Dennison adjunct professor of history. The university is dependent on annual legislative appropriations. The library contains 50,000 volumes. President, William Spenser Currell.

**SOUTH DAKOTA. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 707,740. The population in 1910 was 583,888.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16, were as follows:

	Acreage	Prod. Bu.	Value
Corn . . . . . 1916	2,950,000	84,075,000	\$64,738,000
1915	3,250,000	94,250,000	46,182,000
Wheat . . . 1916	3,650,000	24,825,000	87,237,000
1915	3,725,000	63,762,000	54,835,000
Oats . . . . . 1916	1,850,000	56,425,000	25,956,000
1915	1,725,000	72,450,000	20,286,000
Potatoes . . 1916	65,000	4,290,000	5,877,000
1915	68,000	7,820,000	2,737,000
Hay . . . . . 1916	730,000	1,387,000	7,490,000
1915	610,000	1,220,000	6,466,000
Rye . . . . . 1916	250,000	4,500,000	5,810,000
1915	200,000	3,900,000	2,964,000
Barley . . . 1916	825,000	18,728,000	15,544,000
1915	750,000	24,000,000	11,040,000

<sup>a</sup> Tons.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned, in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments . . .	1,020	898
Average number of wage earners . . . . .	3,602	3,788
Capital invested . . . . .	\$13,018,000	\$15,060,000
Wages . . . . .	2,297,000	2,628,000
The value of materials used . .	11,476,000	17,080,000
The value of products . . . . .	17,870,000	24,139,000

**MINERAL PRODUCTION.** The total value of the production of gold, silver, copper, and lead in 1915 was \$7,507,782, an increase of \$76,493 over the yield of 1914. The total output of gold was 358,280 fine ounces, valued at \$7,406,305.

The gold production of the State in 1916 was \$7,463,000, compared with \$7,406,305 in 1915. The silver produced was 209,000 ounces, compared with 199,864 ounces in 1915. There was a small quantity of lead produced.

**TRANSPORTATION.** The total railway mileage of the State in 1916 was 4145. The lines having the longest mileage are the Chicago, Milwaukee, and St. Paul, 1794, the Chicago and Northwestern, 1000. No new lines were constructed during the year.

**EDUCATION.** The total number of persons of school age on May 1, 1916, was 177,067. The total enrollment in the public schools was 134,136. The average daily attendance was 87,020. There were employed 6025 female and 1032 male teachers. The average monthly salary of male teachers was \$86.15, and of females \$60.01. During the year special efforts were made to push the organization of consolidated schools, thus bringing to the children of country districts the advantages of graded schools. The vocational aspect of school work was especially stressed.

**FINANCE.** The latest statistics for the State finances are for June 30, 1914. At the beginning of that fiscal year there was in the treasury a balance of \$925,135. The receipts for the year amounted to \$4,337,928, and the disbursements to \$4,444,939, leaving a balance on June 30, 1914, of \$818,123.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the School for the Deaf and Dumb, School for the Blind,

Northern Hospital for the Insane, the Custer Sanatorium, and the State School for Deaf Mutes, at Sioux Falls.

**POLITICS AND GOVERNMENT.** The campaign of 1916 was the quietest of any political campaign in the history of the State. At the primary election in May, which was provided for by a special session of the Legislature held in February, delegates were selected by the Democrats instructed for Wilson, and by the Republicans a delegation headed by Governor Byrnes instructed for Senator Cummins. The most interest hinged on the Republican nomination for Governor. Peter Norbeck, Lieutenant-Governor, was nominated over George W. Egan and R. O. Richards. The Presidential and State campaigns during the summer and fall were so quiet that many believed a small vote would be cast in November, but the general election brought forth more votes than any prior State election. Mr. Norbeck was elected Governor over his Democratic opponent by 22,244 votes. Five referred laws and initiative laws submitted to the voters were all defeated, although the Richards primary lost by only 323 votes out of a total of more than 105,000 cast. Nine constitutional amendments were submitted. The most important was the adoption of constitutional prohibition of the liquor traffic, which was adopted by a vote of 65,334 to 53,038. An amendment authorizing the State to spend money in development of good roads and coal mines was adopted, likewise an amendment allowing municipalities to aid in irrigation. A State and county rural credit amendment was also adopted. All others, including equal suffrage, were defeated. The vote on woman suffrage was 53,432 yes, 58,350 no.

**OTHER EVENTS.** Good crops and high prices made much prosperity among the farmers and stock men. Dairy interests have grown amazingly in the territory west of the Missouri River. In this same section much interest was manifested in the indications and prospects for successful oil wells. Many natural gas wells, the supply coming with artesian water, have been developed. The mining industry has developed greatly and tungsten has been produced in large quantities in the Black Hills section. The Supreme Court, in an important decision, declared that laws passed by the Legislature with an emergency clause attached, could nevertheless be sent to the referendum. This will result in fewer emergency laws in the future. A State bank guaranty law had its first trial in case of the failure of a bank at Owatoma, resulting in all depositors being paid in full in less than 30 days from the time the bank closed its doors.

As a result of elections held on April 18th 14 cities and towns in the State voted against saloons. These included Pierre, the capital, and Hot Springs. Aberdeen, the second largest city in the State, again voted against saloons, while Sioux Falls voted for a reconsideration by a majority of 380.

In January the United States Supreme Court decided against the State in the long contested express tax cases. In 1909 the State assessed the Wells Fargo and the American Express companies on their gross earnings, instead of on their property within the State. Judge Williard, of the United States District Court, decided against the State. The State did not take

an appeal, but in the next year assessed the companies in the same way, and this action was sustained by Judge Elliott of the United States Supreme Court. The companies appealed from the decision, and the United States Supreme Court reversed Judge Elliott.

The Attorney-General of the State in February decided to appeal from the decision of Judge Elliott, of the United States District Court, by declaring the Blue Sky Law of the State unconstitutional. Similar laws in other States had been declared unconstitutional, but this was the first to be appealed to the United States Supreme Court.

The State celebrated the anniversary of its settlement in July. In Yankton a pageant was given which is described as the largest and most significant dramatic entertainment ever given in the State. It dealt with certain important episodes in the history of the State.

**STATE OFFICERS.** Governor, Peter Norbeck; Lieutenant-Governor, W. H. McMaster; Secretary of State, Frank M. Rood; Treasurer, G. H. Helgerson; Superintendent of Education, Charles H. Lugg; Attorney-General, C. C. Caldwell; Adjutant-General, W. A. Morris; Auditor, J. E. Handlin; Commissioner of Agriculture, N. E. Knight; Commissioner of Insurance, M. H. O'Brien—all Republicans.

**JUDICIARY.** Supreme Court: Presiding Judge, John Howard Gates; Justices, Charles S. Whiting, E. G. Smith, James H. McCoy, Samuel C. Polley; Clerk, E. F. Swartz.

**STATE LEGISLATURE:**

	<i>Senate</i>	<i>House</i>	<i>Joint Ballot</i>
Republicans .....	36	90	126
Democrats .....	10	18	28
Republican majority..	26	77	103

**SOUTH DAKOTA, UNIVERSITY OF.** A co-educational State institution at Vermillion, S. Dak., founded in 1883. There were 605 students registered in the autumn of 1916 and the faculty numbered 60. The university had a total income for 1915-16 of \$195,733. There are 35,000 volumes in the library. President, Robert Lincoln Slagle.

**SOUTH DAKOTA STATE COLLEGE OF AGRICULTURAL AND MECHANIC ARTS.** A co-educational State institution at Brookings, S. Dak., founded in 1881. The total enrollment in all departments in the fall of 1916 was 689 and there were 72 faculty members. During the year Miss Mabel Ward was elected professor of home economics to succeed Nola K. Fromme, resigned. The income in 1916 was about \$30,000. The library contained 26,000 volumes. President, Ellwood Chappell Perisho.

**SOUTHERN FLOODS.** See FLOODS AND FLOOD PREVENTION.

**SOUTHERN NIGERIA.** See NIGERIA.

**SOUTHERN RHODESIA.** See RHODESIA.

**SOUTHERN SOCIOLOGICAL CONGRESS.**

See SOCIOLOGY.

**SOUTH GEORGIA.** An island dependency of the Falkland Islands (q.v.).

**SOUTH ORKNEY ISLANDS.** A dependency of the Falkland Islands (q.v.).

**SOUTH POLE.** See POLAR RESEARCH, *Antarctic*.

**SOUTH SHETLAND ISLANDS.** See FALKLAND ISLANDS.

**SOY BEAN FLOUR.** See FOOD AND NUTRITION.

**SPAIN.** A constitutional monarchy of southwestern Europe, hereditary in the male and female lines of the house of Bourbon-Anjou. It occupies the eastern part of the Iberian Peninsula and is separated from France by the Pyrenees. Madrid is the capital.

**AREA AND POPULATION.** The total area is 504,547 square kilometers, or 194,794 square miles. The population, according to the census of Dec. 31, 1910, was 19,943,817, an average density for the kingdom of 40 to the square kilometer. The number of marriages in 1914 was 132,451; births, 609,188; deaths, 451,098, emigrants, 66,596 (50,359 in 1915). The communal population (1910) of Madrid was 599,887, Barcelona 587,411, Valencia, 233,348, Seville 158,287, Málaga 136,365, Murcia 125,057, Saragossa 111,704, Carthagena 102,519, Bilbao, 93,536, Granada, 80,511, Lorca 72,795, Valladolid 71,066, Palma (Balears) 67,544, Cádiz 67,174, Córdoba, 66,831, Santander, 65,046, Santa Cruz de Tenerife 63,004, Jerez de la Frontera 61,250, Las Palmas 60,338, Alicante 55,300, Gijón 55,086, Oviedo 53,269, Badajoz 35,039.

**EDUCATION AND RELIGION.** The municipalities bear the main cost of education, which is free but totally inadequate. The clergy still control many schools, though recent legislation provides for inspection and direction of staff and curricula. Illiteracy is widespread. Each province maintains a high school, but the curricula are defective. Special schools are few and ill attended. There are universities in 10 cities. The Roman Catholic is the state religion and until 1910 public exercise of all other creeds was prohibited. In that year limited privileges were tendered to Protestant worship.

**PRODUCTION.** The interior is an elevated tableland, surrounded by mountain ranges. The soil is fertile, but 60 per cent of the area is uncultivated. All sub-tropical fruits thrive. Grains are easily grown and the vine flourishes in every province of the kingdom. Sherry, tent wines, malaga, and alicante are Spanish wines in demand for export, and large quantities of ordinary wines are produced for home consumption.

The area in acres under the principal crops and the yield (for three years) in hundred-weights were as follows:

	1913	1914	1915
	<i>Acres</i>	<i>Acres</i>	<i>Acres</i>
Wheat .....	9,640,224	9,676,879	9,222,560

Olives, citrous fruits, almonds, pomegranates, dates, etc., are exported. There were in 1911 (December 31st) 546,035 horses, 904,725 mules and hinnies, 836,741 donkeys, 2,541,112 cattle, 15,725,882 sheep, 3,369,624 goats, 2,472,416 swine, and 3398 camels.

Iron, copper, and lead deposits exist in profitable quantities; the mines in operation, however, are run with foreign capital under foreign management. The total output for 1913 was valued at 269,744,912 pesetas.

The value of the fisheries products was estimated at about 71,995,715 pesetas in 1914. There are cotton, woolen, paper, cigarette, glass, and cork factories.

COMMERCE AND COMMUNICATIONS. The value of imports for home consumption and exports of domestic produce are shown in the table below in thousands of pesetas:

	1908	1911	1913	1914
Imports .....	981,625	993,832	1,140,651	1,110,866
Exports .....	896,342	961,969	1,145,992	948,091

The principal countries of origin and destination in the 1912 trade (with values in thousands of pesetas) were Great Britain, France, United States, Germany, Argentina, Portugal, British India, Russia, etc.

Principal articles of import and export are shown below, values in thousands of pesetas, for 1914:

	Imp.	Exp.
Stone, minerals, etc. ....	114,546	114,056
Metals and mfrs. ....	54,954	120,841
Drugs and chem. prods. ....	118,339	84,820
Cotton mfrs. ....	188,203	47,241
Other veg. fibres, etc. ....	19,841	4,226
Wool and hair, etc. ....	12,692	59,789
Silk and mfrs. ....	21,590	4,938
Paper, etc. ....	12,300	11,922
Timber and mfrs. ....	56,220	62,796
Animals, etc. ....	47,647	37,311
Machinery .....	128,276	4,073

Various .....	23,413	10,039
Precious metals .....	28,417	13,177
Other .....	.....	.....
Total .....	1,110,866	948,091

Vessels entered in the 1914 trade, 18,519 of 22,229,159 tons; cleared, 16,482 of 19,265,265.

Railways in operation Jan. 1, 1912, 14,805 kilometers. The total length of the railways in Spain was 9377 miles, of which more than three-quarters was of standard gauge. The receipts of the railways decreased \$3,000,000 in 1914, from receipts of 1913. Since the outbreak of the war there was a tendency to put the Spanish railways under French control and when the president of the Southern Railways of Spain died in 1915 his interest in the railways was purchased by the British government in order to keep the line, which serves important British mining interests, from falling into German

hands. The shares so purchased were transferred to the Andalusian Railway Company, a French concern, which had long wanted to get control of the Southern Railway, in order to secure a monopoly of the southwestern corner of Spain. Telegraph lines, 42,935 kilometers; wires, 93,495 kilometers; stations, 1956 (state, 1118); wireless stations, 22 and 66 on board vessels. Post offices, 6041.

FINANCE. The peseta (par value 19.295 cents) is the unit of value. Spain has still a paper currency. Gold is quoted at about 7 to 9 per cent premium. Revenue and expenditure in pesetas are given below for three years:

	1910	1914	1915
Revenue ..	1,071,240,342	1,848,731,639	1,916,528,000
Expenditure	1,028,214,361	1,437,350,660	1,948,958,000

The budget for 1916 follows; it will be seen that it is identical with the 1915 budget, owing to the fact that the new government which came in in December, 1915, adopted the 1915 budget for the ensuing year:

Revenue	1000 Ps.	Expenditure	1000 Ps.
Direct taxes on land, trade, government salaries, registration, etc. . . . .	490,108	Public debt .....	422,520
Indirect taxes, customs, excise, etc. . . . .	431,800	Pensions .....	47,585
Tobacco monopoly, lottery, mint, and minor sundries ..	313,370	State .....	928
Revenue from lands .....	81,771	Worship .....	41,689
Public treasury ..	81,771	Justice .....	19,864
		War .....	164,641
		Marine .....	68,784
		Interior .....	94,152
		Instruction .....	74,356
		Public works ..	184,321
		Finance .....	18,584
		Collecting .....	150,991
		Colonies .....	1,800
		Morocco * .....	124,802
		Other .....	.....
Total .....	1,280,536	Total .....	1,465,044

\* Campaign.

The public debt stood, Jan. 1, 1916, at 9,404,043,346 pesetas.

GOVERNMENT. The constitution of June 30, 1876, vests the executive power in a sovereign, acting through a responsible council of ministers. The legislative authority rests conjointly with the king, in the Cortes, composed of a senate (180 life members—princes of the blood, nobles, magnates, and functionaries—and 180 members indirectly elected for five years) and a chamber of deputies (404 members elected for five years by the electoral colleges).

The reigning king, Alfonso XIII, was born May 17, 1886, after his father's death. Until he was 16 years old (the age at which a Spanish sovereign attains his majority) his mother reigned as queen-regent. He married, May 31, 1906, Princess Victoria Eugenie of Battenberg, and has three sons and two daughters. Heir apparent, Prince Alfonso, born May 10, 1907.

HISTORY

SUMMARY OF EVENTS. The most important feature of the year was Spain's attitude toward the belligerent Powers, discussed in a succeeding paragraph. Other events may be briefly summarized. As reported in the last YEAR BOOK the Cortes was dissolved on December 23rd. During the next three months there was a great deal of economic disturbance. There was a bakers' strike in Madrid caused by the high

price of flour, and followed by the resignation of the mayor. A general strike was proclaimed in Valencia and in many of the industrial centres there was similar trouble. There was dissension in the Liberal ministry regarding the deepening of the harbor of Barcelona, and the Minister of Finance, Urzaiz, resigned, and the Foreign Minister assumed his portfolio, while the Prime Minister took over the portfolio of the Foreign Office. The ministry, however, secured a strong majority in the election of April 9th, having 235 out of a total of 431, the other parties being distributed as follows: Conservatives, 86; Republicans, 19; Maurists, 16; Regionalists, 13; Laciervists, 8; Jaimists, 8; Independents, 10; Catholics, 4; Nationalists, 1; and Integristas, 1. The Liberals had also a considerable majority in the upper chamber of the Cortes. On April 30th there were changes in the cabinet, Villanueva and Salvador retiring, and Jimeno became Foreign Minister, Alba Minister of Finance, Jimenez of the Interior, and Gasset of Public Works. After the death of Señor Barroco, Minister of Justice, October 7th, Señor Alvarado succeeded to the portfolio. The Conservative, Maura, and the Jaimist, Mella, organized a *bloc* of the Right against the government.

A general strike was proclaimed in July as the result of a serious industrial crisis, and the government immediately declared martial law throughout the country, whereupon the strikers agreed to arbitrate their demands and work was resumed. In July a manifesto called an Address by Spanish Catholics to Belgium was issued in which the acts of the Germans in Belgium were condemned and sympathy expressed for Belgium. It demanded reparation for the wrongs done Belgium and expressed the hope that their liberty and welfare would be completely restored. The signatures to the document were 500 in number, the names coming chiefly from the literary, clerical, and university classes.

The King having replied with generosity to a request on the part of a relative for aid in finding a missing soldier, received many similar requests, and finally established a bureau of mercy under his own personal charge for carrying out that work. Early in the year about 200,000 letters had come in from France alone. A numerous staff was employed at the Royal Palace of Madrid. At the close of the year public attention was drawn to Spain's reply to President Wilson's peace note, which was published in Spain before delivery in the United States. It declared Spain's sympathy with the President's purpose but her belief that the time was inopportune and success impossible. It therefore reserved its measures for peace to a future date when conditions should be more favorable. Spain's reply was the first to offer a suggestion of an entente among neutrals. It said: "Meanwhile the Spanish government believes the time has come to declare, as regards an entente among the neutral powers, that it is disposed now, as it was at the beginning of the war, to open negotiations that might bring about an understanding whereby it would be possible to reunite all the belligerent powers." See STRIKES AND LOCKOUTS; WAR OF THE NATIONS, *Discussions of Peace*.

NEUTRALITY. The attitude of the government toward the war continued to be outwardly neu-

tral. As to the feeling in Spain, it was according to all accounts sharply divided. At the court there were partisans of each group of belligerents, and in the country at large the aristocracy and the wealthy classes seemed generally on the side of Germany, while the intellectuals and a large number of the common people were partisans of France. The Carlists and the anti-dynastic parties were pro-German, while the Reform party and the Republicans were for the French. The principles at the basis of the government's policy were that peace was the chief interest of Spain, but that from her geographical position it was above all important that she should be on good terms with England and France. The King at an early stage removed all French anxiety in regard to the Pyrenees and Morocco by the assurance that Spain would take no further action there, and at the same time he assured Great Britain on the score of Portugal, withdrawing some of the garrisons in the valley of the Tagos. Early in April it was announced that the British had acquired a controlling interest in the South of Spain Railway, tapping one of the largest mineral regions in the country. The relations with France and England were, from the first, friendly, and this policy was supported by all parties in Parliament. Outside Parliament, however, it occasioned hostility on the ground that it was unfair to the Central Powers. The Entente Allies derived much advantage from Spain as a source of supply, for while neutrality opened a way to any power that could receive her supplies, England and France were the only ones that could profit from it. Señor Maura revived the discussion of the question and revealed the division of public opinion by declaring squarely on September 10th that Spain should definitely ally herself with the Entente Powers. He pointed to the agreement of 1904 on the subject of Morocco and to that of 1907 on the status quo in the Mediterranean as proof of the common interests of Spain with the Allies. Many agreed with him up to that point, but there was no sign that a large body of public opinion favored actual intervention. On the whole Spain seemed determined to adhere to neutrality, and while many favored a policy of special benevolence toward the Entente Powers within the limits of formal neutrality, the pro-German elements criticized the government as favoring that side and carried on a vigorous propaganda on behalf of Germany.

SPALDING, JOHN LANCASTER. An American Roman Catholic archbishop, died at Peoria, Ill., Aug. 25, 1916. He was born at Lebanon, Ky., in 1840, and traced descent from the English house of Lancaster. His education was obtained at St. Mary's College, Emmitsburg, Md., and at Mount St. Mary's of the West at Cincinnati. It is said that Archbishop Spalding turned to the priesthood only after his uncle, then Archbishop of Baltimore, had refused to get a dispensation to enable him to marry a cousin. His fiancée entered a convent in St. Louis, and he went abroad to study. He took the degree of doctor of sacred theology at the University of Louvain, Belgium, and gained further training at Rome. Returning to the United States in 1865, he was for four years secretary to the Bishop of Louisville and during three years built up a flourishing church among the negroes. In order to gather material for a

biography of his uncle, who had lately died, the young priest went to New York, where he remained for some years, writing and serving as chancellor of the diocese and as assistant rector of St. Michael's. He attracted such wide attention by his sermons and administrative ability that in 1877 he was appointed first Bishop of Peoria. This diocese, which then had only 51 churches, the bishop built up till, when he resigned in 1908 because of ill health, it had 250 churches, and schools and colleges besides. On his retirement he was created titular Archbishop of Scythopolis. Archbishop Spalding became known as one of the liberal leaders of his church in America. He helped to found the Catholic University at Washington and Trinity College for women, and his work toward a solution of the problems of capital and labor led to his appointment by President Roosevelt as a member of the Anthracite Coal Strike Commission in 1902. When Columbia University, in the same year, gave him the degree of doctor of laws, it was the first time a Catholic prelate had ever been so honored by the university. Some of Archbishop Spalding's writing was done under the pen name of Henry Hamilton. He published, besides the life of his uncle, already noted: *Education and the Higher Life; Aphorisms and Reflections; Religion, Agnosticism, and Education; Means and Ends of Education; Religious Mission of the Irish People; Socialism and Labor; Religion and Art, and Other Essays*; and other books, and many brochures. His Works have been published in 10 volumes at Chicago.

**SPANISH LITERATURE.** At the time of printing official statistics for Spanish literature in 1916 had not appeared, but, judging by the figures at present available, it seemed probable that the total output for 1916 would fall about 300 volumes short of the product of recent years. The *Bibliografía Española* gave a total of 1273 books up to December 1st, as against 1535 on the same date in 1915. The European war continued to hamper the importation of books, and this fact again controlled the scope of this résumé.

**CERVANTES TERCENTENARY.** The tercentenary of Cervantes's death, which occurred in 1616, caused the production of numerous studies concerning the author and his works. Only a few can be indicated: F. A. de Icaza, *De cómo y por qué "La Tía fingida" no es de Cervantes*; A. Cotarelo y Valledor, *El teatro de Cervantes* (to which the Spanish Royal Academy awarded the Berwick y Alba prize); A. Báig Baños, *La Emperatriz del mundo (Estudio sobre Dulcinea del Toboso)* and *Quién fué el licenciado Alonso Fernández de Avellaneda?*; E. Cotarelo y Mori, *Los puntos oscuros en la vida de Cervantes*; J. M. de Ortega Morejón, *Apuntes para dos obras relacionadas con Cervantes*; V. García Calderón, *Une enquête littéraire: Don Quichotte à Paris et dans les tranchées*; J. López Barrera, *Cervantes y su época*; J. Cejador y Frauca, *Cervantes . . . bibliografía crítica*; F. Climent Terrer, *Enseñanzas del Quijote*; A. Bonilla y San Martín, *Cervantes y su obra*; N. Alonso Cortés, *Casos Cervantinos que tocan a Valladolid*; and R. Ruiz López, *Guía espiritual del . . . Quijote*.

Through the efforts of King Alfonso, Archer M. Huntington (president of the Hispanic Society of America, by which a splendid Cervantes

exhibit was held), and the Marqués de la Vega Inclán, the house that Cervantes occupied in Valladolid has been acquired and restored as a Cervantes museum. In one of the lower room chapters from Cervantes are to be read every day. A printing press has also been set up in another room and Cervantes's works are to be issued therefrom.

Neither England nor Spain has forgotten that, overlooking the differences in the calendars, Shakespeare and Cervantes died on the same day, April 23rd. The British Academy and the government held a celebration in honor of both writers, and the Cervantes Chair of Spanish was established at London University. To this celebration the Spanish Academy sent its only honorary member, the Duke of Berwick and Alba; and as a return courtesy established a handsome prize for the best study of the subject: *Shakespeare en España: Traducciones, imitaciones, e influencia de las obras de Shakespeare en la literatura española*. Even without this stimulus, E. Juliá Martínez has published a large work entitled: *Shakespeare y su tiempo (historia y fantasía)*.

**LITERARY CRITICISM.** Despite all the aforesaid Cervantine activity, other forms of literary criticism showed a healthy existence. The first three numbers of the *Bulletin Hispanique* and of the *Revista de Filología Española* (both quarterly), and four of the five numbers of the Spanish Academy's *Boletín* appeared on time. The Hispanic Society of America, by issuing eight numbers, is at last up to date with its *Revue Hispanique*. All these journals have maintained their usual standards. Of scholarly studies in book form the following may be mentioned: A. Maseda, *Estudios de crítica literaria* (chiefly a keen and sympathetic study of the Gallegan poetess Rosalía de Castro); A. González Besada, *La Mujer gallega y Rosalía de Castro* (reception discourse in the Academy); M. Pérez Curis, *El Marqués de Santillana . . . el poeta, el prosador y el hombre*; R. Menéndez Pidal, *Crónica general de España* (reception discourse in the Royal Academy of History), and *Luis Vélez de Guevara: La Serrana de la Vera* (in collaboration with María Goyri de Menéndez Pidal); A. Salcedo Ruiz, *Literatura Española, Resumen de Historia Crítica* (2nd ed., wholly revised, very much enlarged, and profusely illustrated, vols. 1, 2, and 3, to the dawn of Romanticism), and *Historia de España: Resumen Crítico* (a reprint); J. Cejador y Frauca, *Historia de la lengua y literatura castellana* (vols. 3 and 4, through Philip III); A. Castro and F. de Onís, *Fueros leoneses . . . edición y estudio*; Marqués de Villa-Urrutia, *El estilo diplomático* (reception discourse in the Academy); J. de Lamano y Beneite, *El dialecto vulgar salmantino* (awarded an *accessit* by the Academy); La Real Academia Gallega, *Diccionario gallego-castellano* (fascicles 1-5); S. Calleja, *Nuevo Diccionario Enciclopédico de la Lengua Castellana* (reprint of this useful manual); Cervantes, *Obra Completas (Comedias y Entremeses, vol. 1, by R. Schevill and A. Bonilla y San Martín)*; Cervantes, *Don Quijote* (4 vols. of F. Rodríguez Marín's critical edition); Guillén de Castro, *Quien malas manas ha, etc.* (reproduction with introduction by E. Juliá Martínez); Cervantes, *Licenciado vidriera* (ed. by N. Alonso Cortés); Santa Teresa de Jesús, *Obras* (vols. i-iv; prologue by the Marqués de

San Juan de Pedras Albas); Cervantes, *Entre-meses* (by A. Bonilla y San Martín); Cervantes, *Poesías* (by Ricardo Rojas); Quevedo II, *Los Sueños* (by J. Cejador y Frauca, *Clásicos Castellanos*, vol. xxxi); Ramón de la Cruz, *Sainetes* (by Cotarelo y Mori, *Nueva Biblioteca de Autores Españoles*, vol. xxiii). Of Menéndez y Pelayo's *Obras Completas*, vol. vi, and of Juan Valera's *Obras Completas*, vol. xliii, have been reached.

**POETRY** suffered two grievous losses through the deaths of Rubén Darío (a Nicaraguan, esteemed by Spaniards as one of themselves) and Juan B. Cabrera (q.v.).

**DRAMA** gave us Eduardo Marquina's *El Gran Capitán* (produced at a benefit performance by and for María Guerrero); J. M. Ortega Morejón's *El Protector de Inglaterra*; vol. xxii of the *Teatro* of Jacinto Benavente, together with a new play *La Ciudad Alegre y Confiada* (an exquisite allegorical drama treating the general question of national civic preparedness as against personal selfishness); I. Sánchez Estevan's *Rita Luna*, *comedia dramática* (awarded a prize by the City Council of Madrid); and nearly a dozen plays by the Alvarez Quintero brothers.

**NOVEL.** The most important novel of the year was Vicente Blasco Ibáñez's *Los Cuatro Jinetes del Apocalipsis*, dealing with the present war, but with a sanity of judgment and a breadth of view seldom found in war literature. The scene is laid in Argentina, Spain, France, and Germany.

**THE SPANISH ROYAL ACADEMY.** Too late for mention in the 1915 YEAR BOOK, occurred the death of Juan Menéndez Pidal, who had been in possession of his chair only a few months. Francisco Fernández de Bethencourt (Spain's greatest genealogist, and author of the monumental *Historia genealógica y heráldica de la monarquía española: Casa real y Grandes de España*, of which nine quarto volumes had appeared) died in April; and in September the Academy lost José Echegaray (q.v.). Of the members-elect the following had taken their seats: the Marqués de Villa-Urrutia (the diplomat), Miguel Echegaray (younger brother of José Echegaray and himself the author of more than 100 plays), and Augusto González Besada. The Academy awarded the Fastenrat prize to Alejandro Pérez Luján for his novel *La casa de la Troya*. The Academy honored the tercentenary of Cervantes's death by establishing a quinquennial Cervantes Prize of 10,000 pesetas and 500 copies of the book that should win the prize, said book to be published at the Academy's expense. The topic to be treated this time is *Vocabulario general de Cervantes*, and in order to facilitate the work of the competitors, the Academy is proceeding to make photographic reprints of first editions of all of Cervantes's works.

**SPIRITUALISTS' ASSOCIATION, NATIONAL.** This association, which was incorporated in 1893 to unite local Spiritualist societies of the United States, had, in 1916, 1000 local working societies. There were 22 State associations, 500 other local societies, and 32 camp meeting associations. The 200 churches and temples, together with camp meeting property, were valued at \$6,000,000. The number of ordained ministers was 500, of public mediums 1500, and of adherents about 600,000. At the annual convention of the association held in October, 1916, at St. Paul, Minn., the most important projects discussed were a national temple to be erected in Washington, D. C., and a propaganda endowment fund. It was decided to hold the 1917 convention in New York City. The officers of the association are: President, George D. Warne; secretary, George W. Kates; and treasurer, Cassius L. Stevens.

**STANLEY, SIR ALBERT.** See GREAT BRITAIN, Government.

**STANLEY, WILLIAM.** An American electrical engineer, died at Great Barrington, Mass., May 14, 1916. He was born in Brooklyn, N. Y., in 1858, and studied at Williston Seminary and for a short time at Yale, but in electrical science he was self-educated. Between 1885 and 1903, he served as chief engineer of the Westinghouse Electric Company, the Stanley Electric Manufacturing Company, and the Stanley Instrument Company. At 32 he invented an alternating current device which made possible the transmission of electric light and power to long distances, and soon afterward he invented an electrical transformer which came into general use. Mr. Stanley was at one time vice-president of the American Institute of Electrical Engineers, and he was elected to membership in the Institution of Electrical Engineers, London. He was a recipient of the Edison medal for distinguished contributions to electrical science.

**STARS.** See ASTRONOMY.

**STATE BANKS.** Like other kinds of banking institutions State banks experienced a remarkable development during 1916. If one includes under this term what are commonly called State banks as well as savings banks, loan and trust companies, and private banks, their total number on June 30, 1916, according to the Report of the Comptroller of the Currency, was 19,934. They had aggregate resources of \$18,344,000,000. Of this, loans and discounts comprised \$10,164,000,000; investments in bonds and securities, \$4,443,000,000. The principal item of liabilities was individual deposits of \$14,730,000,000.

Regular commercial State banks numbered 15,450 in this report, but this included the stock savings banks of Virginia, South Carolina, Tennessee, Michigan, Wisconsin, North Dakota, Kansas, Montana, Idaho, and Nevada, as well as the trust companies of Virginia, North Carolina,

South Carolina, Tennessee, Idaho, and Nevada, and the private banks of North Carolina and Idaho. Their total resources were \$5,553,000,000, including loans and discounts of \$3,407,000,000; investments of \$693,000,000; checks, clearing house exchanges, and cash on hand, \$404,016,000. The principal item of liabilities was \$4,296,000,000 of individual deposits. Their capital was \$63,497,000; surplus, \$268,821,000; and undivided profits, \$91,152,000. Under the revised law State banks may receive deposits from the postal savings system, and on June 30th they held \$4,457,000 of such deposits.

The number of loan and trust companies exclusive of those included in the foregoing was 1606. Their total resources were \$7,028,000,000, including loans and discounts of \$3,704,000,000, investments of \$1,605,000,000, and checks, clearing house exchanges, and cash on hand of \$439,447,000. These banks held individual deposits of \$5,198,000,000; and postal savings deposits of \$4,826,000. Their paid-in capital was \$475,000,000; their surplus, \$508,000,000; and undivided profits, \$96,669,000.

The 1014 private banks reported by the Comptroller on June 30 had total resources of \$181,852,000, of which loans and discounts amounted to \$117,715,000. They held individual deposits of \$146,765,000. See SAVINGS BANKS and BANKS AND BANKING.

**STATEN ISLAND GARBAGE DISPOSAL.** See GARBAGE AND REFUSE DISPOSAL.

**STATISTICAL ASSOCIATION, AMERICAN.** This organization held its 78th annual meeting at Columbus, Ohio, December 27th-29th. For its joint sessions with other bodies, see *American Economic Association* under POLITICAL ECONOMY. At the special sessions of this association the following papers were read and discussed: "Comparative International Statistics," by Royal Meeker, United States Bureau of Labor Statistics; "Utilization of Statistics in Business," by Julius H. Parmelee, Bureau of Railway Economics; "The Increasing Mortality After 45,—Some Causes and Explanations," by Louis I. Dublin, Metropolitan Life Insurance Company; and "Do the Statistics Regarding the Concentration of Wealth in the United States Mean What They Are Commonly Assumed to Mean?" by Allyn A. Young, Cornell University, Willford I. King, University of Wisconsin, Davis R. Dewey, Massachusetts Institute of Technology, and George P. Watkins, Public Service Commission, New York City. Special sessions were devoted to the discussion of proposals for undertaking practical work, and to special problems growing out of the European war. See POLITICAL ECONOMY.

**STATISTICS.** See sections in articles on various countries and States of the United States; also VITAL STATISTICS.

**STATUE OF LIBERTY.** See ELECTRIC LIGHTING.

**STEAM DRIVEN AUTOMOBILES.** See AUTOMOBILES.

**STEAM ENGINES.** The most striking feature of 1916 was the position that was being gained by the uniflow engine, a modern type with cylinder so designed that on entrance the steam masses into it with maximum effect and acts correspondingly on the exhaust, so that there is minimum change of direction of flow as compared with the older types. It was stated during the year that when worked non-condens-

ing or with vacuums up to 28 inches and in units of less than 1000 kilowatts the uniflow engine was more economical than the steam turbine. As a result it was beginning to find use in refrigeration and in the power plants of iron and steel works. In fact the uniflow engine could be direct connected to the rolling mill and unless the plant was so large and the loads so heavy that turbo-generator units of over 8000 kilowatts capacity could be installed, it was more efficient than the steam-turbine electric drive. These uniflow engines were installed in Germany in considerable numbers, and the largest was said to have a continuous capacity of 6300 horse power and be capable of working to 8000 horse power on peak load. This engine drives a 30-inch 3-high mill. In the United States the first uniflow engines for rolling mill work were building for the Youngstown Sheet and Tube Co. One was to have a steam cylinder 44 x 50 inches and operate at a speed of 110 revolutions per minute. Its capacity would vary from 700 to between 3000 and 4000 horse power. The second engine had a cylinder 37 inches in diameter with a 48-inch stroke. The engines would use steam at approximately 170 pounds pressure, 75 degrees superheated, and 20 inches of vacuum in barometric jet condensers. See also STEAM TURBINES.

**STEAMSHIPS.** See BATTLESHIPS AND OTHER WAR VESSELS; SHIPBUILDING; SHIPPING; UNITED STATES AND THE WAR; WAR OF THE NATIONS.

**STEAM TURBINES.** The demand for turbo-generators of ever greater capacity continued in 1916, and several units far exceeding the record size 35,000 kilowatt machines of but a year or two previously were ordered or under construction. The Interborough Rapid Transit Co. of New York City had ordered two 60,000 kilowatt Westinghouse 3-cylinder, 2-stage, 3-generator units, which represented a distinct advance not only in size but in practice. Each of these units was designed with a high pressure element flanked on either side by a double flow low-pressure turbine. Thus there are three individual units which may be worked singly, together, or in any desired combination, and the shutting down of one does not cut out of service the unit as a whole. Economy is secured in operation, though not in original cost, and there was naturally increased flexibility, even though this was attended by more complicated mechanism. The great advantage claimed for the arrangement was that by affording four paths to the exhaust steam from the high pressure element large areas were provided for the low pressure steam in considerable volume, and it was able to act most effectively. A notable 50,000 kilovoltampere turbo-generator was ordered during the year by the Detroit Edison Co. from the General Electric Co., and was a single turbine of single-flow design, direct connected to a single generator. This was in several ways a record machine. Not only was more power produced from a machine in one casing than from any other single turbine, but it was to have the largest condenser built up to that time, of the single-pass type, with 70,000 square feet of surface and provided at either end with a circulating pump requiring 450 horse power for its operation. Another notable turbine unit of the year was a Westinghouse cross-compound tur-

bine of 45,000 kilowatts capacity for the Narragansett Electric Lighting Co. of Providence. This had a single-flow straight reaction type high pressure element, and at the low-pressure end a double flow turbine with eight groups of blades on either side and each side exhausting into a separate jet condenser of the Westinghouse-Le Blanc low head type. A 35,000 kilowatt single casing turbine was ordered by the Boston Elevated Railways Co. and was built under a guarantee of 10.65 pounds of steam per kilowatt hour when developing 25,000 kilowatts, although such a performance was said to be not uncommon with large turbines of 30,000 kilowatts capacity and over. The general tending was to work to higher steam pressures, 300 and 350 pounds being used in turbines installed or under construction during the year, and pressures as large as 500 to 1000 pounds being considered. Mechanical engineers were alive to the high costs of fuel during the year and increased economy was the aim of all new power plant installations and equipment. See DYNAMO-ELECTRIC MACHINERY.

**STEVENS INSTITUTE OF TECHNOLOGY.** A non-sectarian technical institution for the education of men at Hoboken, N. J. It was founded in 1870. The total registration in the fall of 1916 was 540. The faculty numbered 37. Productive funds amounting to \$1,500,000 yielded an income of \$67,540. There were 11,500 volumes in the library. During the year two acres of land adjoining the main buildings of the institute were acquired at a cost of \$110,000. A new gymnasium was completed. President, Alexander Crombie Humphreys.

**STEWART, SAM V.** Relected Democratic Governor of Montana Nov. 7, 1916. See MONTANA.

**STEYN, MARTINUS THEUNIS.** A South African statesman, the last president of the Orange Free State, died at Bloemfontein, Orange River Colony, Nov. 29, 1916. He was born at Winburg, Oct. 2, 1857, and was educated at Grey College, Bloemfontein, and in Holland, after which he studied law at the Inner Temple, London, and was admitted to the bar in 1882. Returning to the Orange Free State, he was appointed state attorney in 1889, the same year was elevated to the bench as second puisne judge, and in 1893 was appointed first puisne judge. In 1896 he was elected by universal suffrage president of the Orange Free State Republic. His policy was to draw the two Boer republics closer together, and the defensive alliance agreed upon by the Transvaal and the Orange Free State in 1897 was heartily supported by him. In 1899 he represented the Orange Free State in the conference at Bloemfontein with Sir Alfred (now Lord) Milner and President Paul Kruger in an effort to settle the difficulties between the British and Boers. The effort failed, and upon the outbreak of the war Steyn called out the Orange Free State troops

to cooperate with those of the Transvaal. In May, 1900, after the British annexation of the Orange Free State by proclamation, he issued a counter proclamation affirming the State's independence. When Kruger left the Transvaal for Europe Steyn became the virtual chief of the Boer forces. He took part in the peace conference that led to the close of the war in 1902. While always ready to promote Boer interests in the Orange River Colony under British rule, he did not take an active part in political life, but spent most of his time in farming.

**STICKNEY, ALPHEUS BEEDE.** An American lawyer and railroad builder, died in St. Paul, Minn., Aug. 9, 1916. His early life was spent in New England. He was born at Wilton, Maine, in 1840, taught school and studied law, and was admitted to the bar at 22. Early removing to Minnesota, he became interested in new railroads, first as a lawyer and later as a capitalist. Mr. Stickney was best known for his connection with the road which developed into the Chicago Great Western. Of this he began construction in 1883 as the Minnesota and Northwestern, and he served as its president until it was consolidated with the Chicago, St. Paul, and Kansas City, then was president of the road under the latter name, and from 1892 to 1900 was chairman of the board of directors. During this last period the road became the Chicago Great Western. In 1908-09 he was its receiver. His charge that certain railroads were guilty of evading the rebate law was responsible in 1909 for an investigation by the Interstate Commerce Commission. Mr. Stickney's interests, in addition to railroads, included the St. Paul union stock yards and packing houses, which he built in 1882.

**STILGEBAUER, EDUARD.** See GERMAN LITERATURE.

**STOCK EXCHANGE.** See FINANCIAL REVIEW.

**STOCKHOLM PEACE CONFERENCE.** See INTERNATIONAL PEACE AND ARBITRATION.

**STOCK RAISING AND MEAT PRODUCTION.** The European war has brought forcibly to the attention of all meat-consuming countries the importance of the animal industry to the common welfare. The presence of many million men in the European armies, engaged in an occupation which calls for enormous quantities of food, without a compensating return in production, has caused an acuteness in the shortage of meat the world over which is greater than any known in the memory of persons now living. It is probably true that the soldiers now fighting in Europe are enjoying a larger amount of meat in their daily rations than they were accustomed to before the war broke out, and it is probable that the appetite for meat which these men have acquired will have a considerable effect upon the world demand for meat after peace is declared.

The leading meat exporting countries of the world are: Argentina, Australia, the United States, and South Africa. In none of these countries has there been a very large increase in recent years in the number of cattle on farms. In the United States the total number of cattle reported on Jan. 1, 1916, was 61,000,000, the same as reported by the census of 1910. Australasia, including only Australia and New Zealand, reports the largest number of sheep

of any section of the world, but there has been no increase recently. The United States is the principal swine producing section of the world, and the greatest exporter of pork products. The number of swine in the United States appears to be increasing rapidly, 68,000,000 being reported on Jan. 1, 1916, an increase of almost 4,000,000 over the year previous, and an increase of 10,000,000 over the census of 1910.

As to the possible development of new sources of supply of meat animals, considerable progress is being made in the development of the cattle industry of South America, and recently steps have been taken to develop this industry in Brazil. Official figures seem to show that the Brazilian cattle industry is progressing favorably. The first actual exportation of refrigerated beef from Brazil was in November, 1914, when a shipment of only a little over 1000 kilos was sent from Santos to Great Britain. There are now, however, a number of meat packing establishments in that country. Refrigerated meat exports during the first four months in 1916 are reported by the consul-general of the United States at Rio de Janeiro at 6,228,209 kilos, compared with 345,513 kilos for the corresponding period of 1915. The value of these shipments is reported at \$1,210,005 and \$54,025 respectively. Practically all of this meat went to France and Great Britain. Brazil has always been an important exporter of jerked beef, but this product is almost entirely consumed in South America. The entrance of this country into the refrigerated beef industry is a factor of importance which should not be overlooked. It is also interesting to note that a small meat packing company has been organized in Paraguay and a plant is to be erected at Asuncion.

**THE HORSE INDUSTRY.** Interest in the horse industry has been greatly aroused during the progress of the war, on account of the large purchases made by the Allied governments for military purposes. Accurate figures show that since the war was declared, over 900,000 head of horses and mules have been exported from the United States alone to Europe and Canada, practically all of which were for military purposes. The United States and Russia combined possess far the largest number of the world's horses, and those of the United States are of a much higher quality and are more useful than those of Russia. The export trade in horses from the United States during the past two years has not had any serious effect on the horse market. The horses taken have been largely of an ordinary grade, and few mares have been exported, practically none of which were breeders. The effect of motor trucks on the horse industry can be seen in almost any city, but it is a fact that good draft horses command as high prices as ever for city use. The farm demand for horses is as strong as ever, and mechanical traction has not as yet seriously affected that market.

**EXPORTS OF MEAT AND MEAT PRODUCTS.** The exports of meat and meat products from the United States have tremendously increased since the outbreak of the European war. In point of value, there has been an increase of almost 100 per cent. The value of the export of meat products during the fiscal year preceding the outbreak of the war was, in round numbers, \$143,000,000. In the fiscal year 1916 the

value was slightly less than \$267,000,000. This trade has been to a considerable extent at the expense of consumption in the United States. During the fiscal year 1914 less than 7,000,000 pounds of fresh beef were exported. During the fiscal year 1916 the amount shipped abroad was over 231,000,000 pounds.

Roughly speaking, about 60 per cent of the animals slaughtered for food in the United States are killed at abattoirs having Federal inspection, the remainder being slaughtered at local plants doing an intrastate business, where Federal inspection is not maintained, and on farms. In the fiscal year 1916 the number of cattle slaughtered under Federal inspection was 217,000 less than in 1907, although the slaughter in the year 1910 exceeded that of 1907 by over 300,000 head. The slaughter of swine has increased tremendously, and the indications are that the fiscal year 1917 will show a considerable increase over 1916. The increase in slaughtering of swine from slightly less than 32,000,000 head in 1907 to over 40,000,000 head in 1916, bears strong witness to the great increase in the swine industry throughout the country. Sheep slaughtering were also considerably larger than in 1907. A rapid increase in the slaughter of sheep from 1907 to 1914, and especially from 1911 to 1914, was largely due to the disposal of sheep on the passage of the tariff law placing wool on the duty free list. A world shortage in wool and increased prices for sheep in the United States have automatically checked this practice, and slaughtering of sheep have decreased in the last two years.

The slaughter of calves does not seem to be alarming on the face of the official Federal inspection reports, the number in the year 1916 having been exceeded in a number of previous years.

**THE DEVELOPMENT OF THE HOG INDUSTRY IN THE UNITED STATES.** One of the most interesting features of agricultural development in the United States during recent years has been the rapid spread of the hog industry into sections in which it was not formerly a factor. Reports to the Department of Agriculture of the number of swine on farms Jan. 1, 1916, show that in 14 States the number was 10 per cent or over above that reported on Jan. 1, 1915. Of these States, only two were corn belt States. The development of the industry in other sections shows the realization by farmers of the profit of hog raising in agriculture and the determination of the people in those sections to develop home-grown sources of pork products.

During the year the local packing plants recently established in Southern States have continued to flourish, and numbers of others are being built or projected. There is also quite a development there in municipal abattoirs, maintained by the municipality, where local butchers may slaughter animals under inspection, with all the facilities of a modern abattoir.

The agricultural extension movement is undoubtedly responsible for most of this increase in hog raising. In the Southern States the Pig Club movement has had a profound effect.

**THE SHEEP AND WOOL INDUSTRY.** Considerably to the surprise of wool growers, the expected did not happen when wool ultimately was placed on the duty free list on Dec. 1, 1913. A world shortage of wool developed, particularly in wool of grades produced in the United

States, commonly known in the trade as "cross-bred" wools. Prices held firm and sheep men soon ceased disposing of their flocks. The outbreak of the European war intensified this shortage and the demand for wool has sent prices to a higher level than in many years. The action of the British government recently reported, in placing a practical embargo on the entire Australian clip of the year 1916, has aggravated this condition, and prices are still advancing. In addition to the shortage in wool production, the people of the United States have been developing an appetite for lamb and mutton, and this has broadened the outlet for mutton-bred lambs from the range.

At the same time, a determined campaign has been in progress throughout the range States for the improvement of methods of handling wool on the range. A number of modern sheep shearing sheds have been erected in the range country, where wool is classed systematically and baled according to the best known methods.

One of the most remarkable features of the development of the sheep industry in the country is the growing interest in the rehabilitation of sheep raising on farms. A conference was held at Philadelphia in November, 1916, under the auspices of the Philadelphia Wool and Textile Association, at which representatives of various interests concerned with the development of the farm sheep industry were present. A systematic plan was drafted for a propaganda campaign to cover the farming States.

**THE CATTLE INDUSTRY.** The outstanding feature of the cattle industry during the year has been the high prices obtained by cattle raisers. Prices of fat cattle have ruled at a very high figure, and feeders as a rule have found their operations profitable. A shortage in the corn crop, however, has tended to reduce the price of feeders somewhat, and it is possible that a smaller number of cattle will be fed in the corn belt during the winter of 1916-17 than a year ago. The future of the beef cattle industry in the corn belt has been a matter of grave concern for some time, on account of the high price of land and grain and the speculative character of the conventional cattle feeding operations. A report issued by the United States Department of Agriculture during the year emphasized the surer element of profit in the raising rather than in the fattening of cattle. It shows that the production of baby beef where calves are fattened out at an age of about 15 months is profitable, but farms where cattle are raised and fattened out at ages of from two to three years, show a loss on their feeding operations. The report presents significant figures on the profits made where each cow is allowed to nurse two calves, and the Department regards this as of sufficient importance to warrant further study of this phase of the subject.

The extension of the beef cattle industry in Southern States goes on rapidly. Excellent progress is being made in the campaign to eradicate the Texas fever cattle tick, and the follow-up work of national and State agricultural forces is being effectively prosecuted. Herds of breeding animals have been established in territory which but a few years ago was tick infested and the breeding of improved cattle unprofitable on this account.

The establishment of a rational and economic system of cattle raising in the corn belt and the development of the industry in the Southern territory as a consequence of the tick eradication campaign seem to be the most promising lines of development.

Breeders of pure-bred live stock in the United States are enjoying a greater prosperity than has ever been known in the country.

An event of more than ordinary importance to American live stock breeders was the interchange of judges between the Sociedad Rural Argentina of Buenos Aires and the International Live Stock Exposition of Chicago. The latter show was held for the first time in several years, on account of the prevalence of foot-and-mouth disease.

**STOCKS AND BONDS.** See FINANCIAL REVIEW.

**STOMATOLOGY.** The importance of oral infection as a source of general disease is receiving more and more attention. Focal infection about the teeth occurs, according to one observer, in from 69 to 89 per cent of all individuals, the majority of these being connected with chronic abscesses in the roots of the teeth or in the root canals. Dr. Frank Billings, of Chicago, lays down some of the principles involved in focal infection as related to systemic diseases, and discusses the subject under three headings: (1) The pathogenic micro-organisms involved and the conditions which modify their virulence of activity. (2) The infected individual and the conditions which modify his susceptibility to infection. (3) The nature and result of the reactions between the infected agents and the tissues of the host.

The pathogenic micro-organisms which may cause infectious diseases are numerous, comprising fungi, protozoa, and bacteria, the latter being the most important of these. The members of the streptococcus group, together with pneumococci, staphylococci, colon bacilli, diphtheria, and tubercle bacilli, are most frequently implicated. All of these bacteria may be found on the skin and on the mucous membranes of the tonsil, pharynx, and nose, as well as in the mouth, where they may exist simply as parasites without producing disease in the host, who, either through acquired immunity or natural resistance, acts merely as a carrier. Such micro-organisms, however, if transmitted to a new host and a new soil more fitted for their development, may produce their characteristic lesions; or the original host, if subjected to conditions which lower his resistance, may become himself the victim of their activities.

Among the streptococci which may, under favorable conditions, produce lesions in other parts of the body are *S. hemolyans (longus)*, *S. mucosus*, and *S. viridans*. The latter, so-called because of the green color it produces when growing in colonies on blood-agar medium, is ordinarily mildly pathogenic, and is a very common inhabitant of the mouth and tonsils; but under favorable conditions it may become actively pathogenic, attacking especially the endocardium, where it may give rise to enormous vegetations on the heart valves. *S. hemolyans* occasionally migrates to the subcutaneous tissues, producing a variety of erysipelas. The effects of the tubercle bacillus, pneumococcus, and the pus-producing staphylococcus are well known. A most important factor in the ques-

tion of focal infection is the immunity of the individual. Man possesses a natural immunity to infection which may vary in degree, but is never absolute.

The versatility with which an individual is infected depends not only on the characteristics of the infectious agent, but on peculiarities of the host. These peculiarities again depend on age, environment, occupation, climate, sanitary habits, etc., and possibly on heredity. The lymphoid tissue of a child, especially in the nose and pharynx, is relatively excessive, and therefore children are comparatively more susceptible to contagious diseases and subject to tonsillitis, catarrhal disturbances, and suppurative conditions of the ears. From these foci of infection the lymph glands about the neck may become enlarged and diseased and later may serve as additional sources of systemic infection. Occupations which entail exposure to excessive fatigue also lower the resistance, as do conditions of mental stress and chronic worry.

The practical lessons which may be drawn from these investigations lead back to personal immunity and hygiene. The individual who wishes to avoid disease must keep up his resistance against infection to the highest point by attention to the rules of hygiene, including diet, exercise, and the like; and at the same time, when focal infection appears about the upper respiratory tract, or the teeth, he must have it eradicated promptly, before the issues are extensively diseased and micro-organisms obtain entrance to the lymph or blood stream, through them to be deposited in other portions of the body which may be vulnerable.

**STORIES.** See LITERATURE, ENGLISH AND AMERICAN; and articles on French, German, Italian, Russian, and Scandinavian Literatures.

**STORM, THEODOR.** See GERMAN LITERATURE, *Biography* and *New Editions*.

**STRACHAN-DAVIDSON, JAMES LEIGH.** An English educator and classical scholar, died at Oxford, March 29, 1916. The son of an East India merchant who acquired homes in Perthshire and Surrey, he was born in 1843 and was educated at Leamington College and at Balliol College, Oxford, of which, after his graduation in 1866, he became a fellow, and where he was appointed lecturer (1873), sub-dean (1874), and dean and classical tutor (1875). In 1893, when the famous Jowett died, it was expected that Strachan-Davidson would be appointed his successor as master of Balliol. Instead, the post was given to Dr. Edward Caird; but when Caird retired in 1907 it went to Strachan-Davidson. From 1906 he held one of the two Jowett fellowships. As a scholar, he devoted himself to the study of Roman history, a field in which he did notable work, publishing *Selections from Polybius*; *Appian, Civil Wars*, Book I; articles on the Roman constitution in *Smith's Dictionary of Antiquities*; "Life of Cicero," in *Heroes of the Nations Series*; and *Problems of the Roman Criminal Law*. But it was as one of the most popular of Oxford teachers and for his work as dean that he was best known. In 1915, then a pro-vice-chancellor of Oxford, he took his seat on the hebdomadal council. He received the honorary degree of LL.D. from St.

Andrews and Glasgow, and that of D.C.L. from Oxford.

**STRAITS SETTLEMENTS.** A British crown colony of Malaysia, composed as follows: the island of Singapore, 217 square miles, with its dependencies—the Cocos (or Keeling) Islands, about 20 in number (no definite area given), Christmas Island, about 62 square miles, Labuan, 28½ square miles (total population of Singapore and dependencies, census of 1911, 311,985); Penang, 108 square miles, with province Wellesley, about 208 square miles, and the Dindings, about 183 square miles (total population, 278,003); Malacca, 720 square miles (population 124,081). Total area, between 1600 and 1650 square miles; total population, 714,069. Estimated population 1915, 778,160. Chief town of Singapore, Singapore; of Penang, George Town; Malacca, Malacca. Capital of the colony, Singapore. The ports are free. The trade is chiefly transit, the only articles produced for export in the colony being tapioca, rice, rubber, sugar, and coal (from Labuan). The table below shows trade and finance statistics in Straits Settlements dollars and shipping in tons entered and cleared (the Straits Settlements dollar is equivalent to about 56.77 cents):

	1909	1911	1914
Imports . . . . .	318,358,427	398,034,421	391,373,123
Exports . . . . .	281,183,021	341,889,822	334,126,020
Revenue . . . . .	8,795,001	11,409,221	14,016,882
Expenditure . . . . .	8,524,731	9,085,389	10,180,188
Shipping . . . . .	22,192,354	24,086,904	24,859,917

The railways are operated by the Government of the Federated Malay States.

**STRIKES AND LOCKOUTS.** The year 1916 witnessed an unusual number of labor disturbances, especially in the United States, but neither here nor abroad were there many strikes of momentous character. The threatened strike of railway employees was settled by the enactment of the Adamson law (see ARBITRATION AND CONCILIATION, INDUSTRIAL; and RAILWAYS). According to the *Monthly Review* of the Bureau of Labor Statistics the number of strikes and lockouts during the first 10 months was 2890, as compared with 1025 in the same months of 1915. The number of strikes reported as beginning in January was 156; the number increased each month until May, when 515 were reported. Thereafter the number declined to 193 in October. The variety of strikes is indicated by the following list of the more important strikes begun in October: street car men in New York City, Albany, and Springfield (Mo.); employees of the Standard Oil Company at Bayonne; miners of Pennsylvania, Oklahoma, and Michigan; machinists in St. Louis, New York, Boston, Baltimore, Portland, and Wilmington; tailors in Minneapolis, St. Paul, and Cincinnati; tobacco workers and stevedores in Porto Rico; street car men and dredgers in the Canal Zone; iron workers at San Francisco; shipbuilders at Elizabeth (N. J.); molders at Rochester; and messenger boys, window clean-

ers, grocery clerks, cigar makers, neckwear workers, macaroni workers, and hod carriers in New York City. Of the 321 strikes begun in October, 61 were in metal trades; 38 among miners; 34 in the building trades; 16 in clothing; 16 among teamsters; 11 among textile workers and from 5 to 9 among each of the following: street railway men, bakers, tobacco workers, waiters and cooks, food handlers, chemical workers, glass-blowers, paper makers, butchers and meat-packers, freight-handlers, longshoremen, musicians and theatre men, and steamboat men. Of these October strikes 103 were for better wages; 31 for shorter hours; 20 for recognition of the union; 12 for recognition and better wages; 16 because of the discharge of employees; and 23 because of non-union employees. Of the 321 strikes nearly all were in the following States: Pennsylvania, 47; New York, 32; Missouri 29; Massachusetts, 26; Ohio, 23; Illinois, 18; New Jersey, 16; Connecticut, 17; and California, 12. Only a few strikes can be individually described.

**DAIRY FARMERS' STRIKE.** Perhaps the most unique strike of the year was that in the first week in October of the Dairymen's League of New York State. Its members struck against the great distributing companies of New York City which stand between the milk producers and the retail and small wholesale dealers. The Dairymen's League of 17,000 organized farmers demanded a six months' contract with the milk dealers with an advance in price to the farmers of 45 cents a hundredweight of milk. The large dealers, on the other hand, while agreeing to an increase in price, limited it to the month of October; this contract, however, the dairymen refused to accept. The great distributing agencies, such as the Borden and Sheffield companies, held out against the league's demands because they insisted that, having encouraged sanitation and secured extra prices for high grades of milk and cream, they had practically made the market what it is. They also refused to deal with the league instead of the farmers individually, contending that it would lower standards and harm both farmers and dealers. Several of the smaller dealers, however, early accepted the full demands of the dairymen, including the six months' contract. Some violence was shown by pickets of the league in seizing milk cans of "scab" farmers and emptying them on the road. But the strike was finally ended late in October, with a victory for the dairymen, when the Borden Company, which had held out the longest, agreed to accept the milkmen's terms.

**GARMENT WORKERS.** Notwithstanding attempts made by Mayor Mitchel and Jacob H. Schiff to arbitrate through the Council of Conciliation the differences arising between employers and employees in the clothing industry, a lockout was ordered by the Cloak, Suit, and Skirt Manufacturers' Protective Association in New York City, April 29th. Since the manufacturers had abrogated the peace protocol in the summer of 1915, relations between them and the workers had been strained, and when on March 3rd the employers refused to accept certain rulings of the Council of Conciliation, the various locals of the International Ladies' Garment Workers' Union announced that it was no longer able to deal with the association. This ended all contractual relations between the un-

ion and the association and, besides the 60,000 workers in 409 shops who were rendered jobless by the lockout, several thousand workers in 1600 smaller shops operated by sub-contractors were called out in the strike. However, a break came in the strike on May 7th when some 7000 workers returned to factories of 25 independent manufacturers who had settled satisfactorily with the union. On May 22nd, pamphlets denouncing the union leaders were mailed by the cloak manufacturers to the 3000 operatives who were locked out. On May 26th, by the resignation of Rabbi J. L. Magnes, Dr. Henry Mosikowitz, and C. L. Bernheimer as members of a board of moderators in the men's garment industry, a crisis was reached, because in the women's garment industry, the Council of Conciliation headed by Dr. Felix Adler had resigned a few days before the lockout. These latter resigned because the manufacturers refused to arbitrate, whereas the board of moderators resigned because they said the union refused to stand by the agreement it had signed. In a report issued late in May by a group of eminent political scientists and economists, including Henry R. Seager, John Dewey, Franklin H. Giddings, Samuel McCune Lindsay, and Robert Livingston Schuyler, the responsibility for the lockout of April 29th was placed upon the shoulders of the executive committee of the Manufacturers' Protective Association.

On May 31st the Cloak and Suit Manufacturers' Association rescinded the lockout order and invited the workers to return to work on the employers' terms, but this the workers refused to do. In June members of the association declined to attend a conference arranged by a citizens' committee for the purpose of settling differences through arbitration. Stating that many plants had been established in neighboring States, members of the association declared that a large number of them would leave New York City if the strike continued. However, on July 10th at a meeting in the city hall, Mayor Mitchel presiding, representatives of the association and union agreed to begin negotiations for a settlement. But being unable to reach a complete agreement by July 12th, Samuel Gompers, president of the American Federation of Labor, was summoned by a joint call to assist in making terms favorable to the two sides. But on July 20th, no decision having been reached, President Wilson referred a petition asking the appointment of mediators to the Department of Labor. Then, fearing that Federal intervention would lessen the employers' chances of obtaining their demands, more than two-thirds of the manufacturers insisted that an agreement be reached in order to save them from ruin. Two days' secret meetings between the leaders of both sides followed. On July 26th the agreement was presented to the men for ratification, but it was refused on the ground that they had been sold out by their leaders. The men were then given until August 2nd by the employers to accept terms, and on the first of August 45,000 strikers ratified the agreement which had already been approved by the general strike committee and 500 shop chairmen; this decision was reached without government intervention, although on July 31st, the Labor Department had appointed a board of three conciliators.

The agreement finally reached was as follows:

an increase of 55 cents to \$1.50 per week in wages; a working week reduced from 50 to 49 hours; preferential union shop; and right of manufacturers to discharge any employee for cause. Thus the unions obtained their demand for preferential shop and right to strike, and the manufacturers their demand of right "to hire and fire," these two contested points being the cause of the strike.

**ANTHRACITE COAL MINERS.** The demands of anthracite coal miners for recognition of the union, the eight-hour day, and 20 per cent more pay were refused on February 3rd by the operators on the ground that shortage of coal and prohibitive prices would result. But a subcommittee of miners and operators on April 30th reached an agreement as to working hours and wages which on May 1st was approved by the Tri-District Committee representing the United Mine Workers of America in the anthracite mining districts. On August 27th, 16,000 anthracite miners voted to return to work the following day, having tied up the collieries of the Philadelphia and Reading and Susquehanna Coal Company in Shamokin, Pa., for 11 days. The strike was made in an effort to unionize the mines, which was successful.

**BITUMINOUS COAL MINERS.** On March 7th an agreement was reached on a scale for two years between Eastern soft coal operators and a committee of the United Mine Workers of America. The men failed to get several of their demands, namely, a four-year contract, an eight-hour day applying from time of entrance to shaft till time of leaving, and a weekly pay-day instead of two per month. But there was an increase of pay of 5.39 cents per ton in western Pennsylvania, 3½ cents in Indiana, and 3 cents in Ohio and Illinois. The advanced scale affected more than 500,000 men. A 5 per cent advance was granted to men working by the day in yardage, dead work, and broom turning. It was further agreed that district conventions were to settle all local disputes except those of raising wages or cost of coal production. On April 11th a wage agreement between the officials of the United Mine Workers and representatives of local mine owners in New York was ratified by a referendum vote of members of the miners' organization. The new contract beginning April 1, 1916, was for two years and provided for an increase of three cents per ton in mining coal on a mine run basis and an increase of 5 per cent for dead work, yardage, and day labor. And on April 22nd, the president and executive board of district 5, United Mine Workers of America ordered out 2400 miners of Pittsburgh because they had not received the 5 per cent increase for day labor, dead work, and yardage provided for in the New York agreement. But later 40,000 miners of Pittsburgh, rejecting the New York scale, drew up and submitted to the Pittsburgh coal operators' association a new scale. This provided for the same advance in mine work as the Eastern agreement—5.39 cents a ton—with 5 per cent on all day work, but "yardage and dead work and all other conditions to remain the same as in the 1914 contract." There were many other strikes of a minor nature among the coal fields during the spring and early summer.

**EAST YOUNGSTOWN.** The first week in January began a strike by laborers in the plant of the Republic Iron and Steel Company at East

Youngstown, Ohio, for an increase of wages; it spread to the plants of the Youngstown Sheet and Tube Company, the Youngstown Iron and Steel Company, and the Brier Hills Company. On January 7th a battle between strike sympathizers and armed guards at the plant of the tube company was followed by a riot in which 3 men were killed, 19 people wounded, and 15 buildings burned. State troops were then called out to restore order. A week later strikes were called off in the plants of the Republic Iron and Steel Company, and the Youngstown Sheet and Tube Company, the men having agreed to accept a 10 per cent wage increase offered by the company in lieu of 25 cents an hour which they had originally asked. After investigating the riot of January 7th, the Mahoning County grand jury on March 8th returned indictments against Elbert H. Gary, chairman of the United States Steel Corporation, and six steel companies. The charge of the indictment was a conspiracy of these concerns to fix the wages of labor and price of iron and steel products in Mahoning County in violation of the Valentine anti-trust law of Ohio.

**STANDARD OIL STRIKE, BAYONNE, N. J.** On October 9th, a strike of employees of the Standard Oil Company for an increase in wages began in Bayonne, N. J. Deciding to shut off the whole of Constable Hook in order to cause idleness or strikes in the plants located there, the strikers established a guard line across the Hook and for three days held possession of the streets. Battles with the police and riots ensued for a week, resulting in the death of three persons and the injury of 37. Finally the police, reinforced by 100 special deputies and 30 firemen, gained control of the situation by driving the strikers into their homes with clubs and revolvers. The managers then agreed to receive all strikers back at work with the exception of those in the shops where the trouble originated, but as the demand for increased pay was refused, the strikers voted on October 17th to remain out. But John A. Moffit and James A. Smyth, conciliation commissioner of the Department of Labor, induced the men to abandon the strike since the Standard Oil Company would not admit mediation until the strike was over. On October 19th, the English-speaking workmen returned to their jobs and were followed on October 20th by most of the others.

**NEW YORK STREET CAR STRIKE.** Because the companies refused to grant motormen and conductors a third raise in wages in six months or to agree to arbitration according to promise, a strike was called on July 22nd on trolley lines in Yonkers, New Rochelle, and Mount Vernon. Gradually the strike spread to New York City. On August 5th not a single surface car was running on many lines in Manhattan. The Public Service Commission and the mayor after several conferences between the companies and union men succeeded in obtaining a tentative agreement between the companies and the men on August 6th by which the strike was ended. In this agreement, although recognition of the union was technically withheld, the right of men to organize and to treat with the company through committees was admitted while arbitration of working conditions and wages was promised. On August 14th, the heads of systems in Manhattan, The Bronx, Queens, and Richmond

received requests for higher wages and better working conditions. These were formulated by committees of employees of various companies and officials of the Amalgamated Association of Street and Electric Railway Employees. A break seemed imminent; but on August 21st, after the company had consented to reinstate all employees in the strike and the union had agreed not to protest against a brotherhood of non-union employees, the dispute was temporarily settled again by Mayor Mitchel.

But negotiations were very soon in an unsatisfactory state once more. On September 1st, at a mass meeting, employees of the Interborough Rapid Transit Company and the New York Railways Company accused the officers of the companies of having violated the agreement and threatened a new tie-up on all transportation lines. There was a final disagreement between officials and employees, and on September 6th the employees of the surface and subway systems voted a general strike; 3000 men on other car lines declared a sympathetic walkout; 5000 policemen were called out for strike duty. On September 7th the Public Service Commission began an investigation of the cause of the strike. The next day reinstatement was offered the men, but only 90 accepted. Then the Central Federated Labor Union appointed a committee with power to call a strike in all the industries of the city, and the men of the Second and Third Avenue lines voted for a sympathetic strike. This movement was seconded by a labor conference and the recommendation sent to each unit of the central union. On September 12th the Interborough refused the commission's recommendation of further conferences with the union and the arbitration of individual contracts. In its statement the commission accused the Interborough Company of breaking a verbal agreement with employees, while it accused the men of breaking their written agreement of August 7th. The union then resolved to call a general strike for September 27th, and the Conference Committee of Central Labor bodies voted unanimously for it. But as many important unions refused to join the carmen, the general strike collapsed. The strike, however, continued, to the increasing disadvantage of the Amalgamated Association. On October 30th, John A. Moffitt and James A. Smyth, Federal conciliators, attempted to bring about a conciliation.

**PRUDENTIAL INSURANCE COMPANY EMPLOYEES.** Because some union employees of the Prudential Insurance Company were dismissed, 600 of the company's agents walked out in a body July 24th; on July 25th the number of strikers was increased to 3000 by walkouts of agents in Philadelphia, Newark, Jersey City, Hoboken, and Bayonne. The strikers insisted that the cause of the trouble was that the company objected to the formation of a union and so discharged the leaders, while the company insisted that the men were discharged for disloyalty. Rowland B. Mahany was appointed by the Department of Labor as conciliator to adjust differences.

**JEWELRY WORKERS.** On February 9th a general strike of jewelry workers in New York City went into effect; diamond setters in Fifth Avenue shops, platinum workers, engravers, lapidaries, polishers, and other craftsmen of the trade to the number of 3000 in 200 shops being

included. This was the first strike in the jewelry trade for 13 years and was called partly because the nearness of the Easter season and its demands on the business promised an early yielding of the employers. But a settlement was not reached until May 1st, when the strikers' demands for an eight-hour day, time and a half for overtime, and the abolition of the home-work system were granted.

**WESTINGHOUSE ELECTRIC AND MANUFACTURING COMPANY.** On April 21st, a walkout at the Westinghouse Electric and Manufacturing Company of East Pittsburgh was the beginning of a series of strikes in Allegheny County, Pa. By the following day 36 strikes involving 50,000 men were reported. The strikers in the Westinghouse plant demanded an eight-hour day, while those of the munition plants were asking an increase of wage. Intimidation of workers in other near by industrial plants and rioting followed, and State troops were called out. Difficulties were adjusted by conciliators from the United States Department of Labor.

**NORWAY.** On June 7th a general strike was begun as a protest against a bill for compulsory arbitration in labor disputes. This bill was introduced into Parliament as a result of sympathetic strikes which were being carried on in retaliation for the lockout declared by the Norwegian Employers' Association in many trades. However, after the passage of the bill, the strike was called off, the men returning to work on June 15th.

**GREAT BRITAIN.** For the first nine months of 1916 there was a total of 414 strikes, while the total for the same time during 1915 was 531. Of the 414 strikes in 1916, 61 were in the building trades, 47 in coal mining, 8 in other mining and quarrying, 46 in engineering, 15 in shipbuilding, 19 in other metals, 48 in textiles, 25 in clothing, 44 in transport, and 101 in other trades. The total number of work people involved in these disputes was 187,388, as against 407,964 for the same length of time in 1915. In 1916, the greatest number striking in any one trade was 54,970 in the textiles, while the smallest was 1073 in quarrying and other mining; whereas in 1915, the greatest number was 280,256 in coal mining, with the smallest, 149, again in quarrying and other mining. The aggregate of working days lost in all disputes was 2,119,200 for 1916, against 2,613,100 for 1915.

**SPAIN.** A strike begun on the Northern Railroad in Spain spread to other railroads and also to other industries in the great industrial centres. The primary cause of the strike was the refusal of the Northern Railroad Company to raise wages as demanded by workers because of the increased cost of food. A general strike being called for July 17th, martial law was declared in the province and city of Madrid. But after conferences between the prime minister and the representatives of strikers it was agreed to submit the differences to a commission and to suspend the general strike. The men returned to work on the 18th. However, as the railroad company did not reply to the government's proposal to arbitrate, the question was eventually submitted to the Institute of Social Reforms, whose decision the government agreed to put into immediate operation.

**STRINDBERG, AUGUST.** See GERMAN LITERATURE, *Miscellaneous*.

**STRONG, JOSIAH.** An American clergyman and leader in social service, died in New York City April 28, 1916. He was born in Naperville, Ill., in 1847, and after graduating from Western Reserve College in 1869, studied for two years at Lane Theological Seminary. He occupied several Congregational pastorates, for three years was chaplain at Western Reserve, and also held denominational office. In 1886 he became general secretary of the Evangelical Alliance for the United States, giving up this work in 1898 to organize and become president of the League for Social Service. When this latter body was reorganized in 1902 as the American Institute for Social Service, Dr. Strong remained its head. He devoted himself especially to a systematic and thorough campaign to reduce mortality by accident. His watch-word, "safety first," came into general use not only in the United States, but abroad. Dr. Strong was called to England to aid the Earl of Meath in establishing the British Institute for Social Service, and to South America in a similar connection. In 1911 he was president of the Social Centre Association of America. His books reached a large circulation and some of them were translated. Among them were: *Our Country* (1886); *The New Era* (1893); *Expansion* (1900); *The Challenge of the City* (1907); *Our World* (1913); *New World-Religion* (1915).

**STUART, RUTH McENERY.** See LITERATURE, ENGLISH AND AMERICAN, *Poetry*, American.

**STUDENT CAMPS.** See UNITED STATES, *Army*.

**STURGKE, KARL, COUNT.** An Austrian statesman, assassinated in Vienna, Oct. 21, 1916, by Ludwig Adler, a Socialist editor. He was born in 1859, at Graz, and was educated at the university of that city. In 1881 he entered the public service. In 1891 he was elected a deputy to the Reichsrat, and three years afterward was made a director in the ministry of public works. He went out of office with the retirement of the Windisch-Graetz cabinet, but in 1909 reentered political life as minister of public works. On Nov. 3, 1911, he became Austrian Premier and reorganized the cabinet to meet new conditions resulting from the European war. The motive which was reported to have actuated Adler, the assassin, was the prime minister's refusal to convene the Austrian Parliament. Adler was also said to have been of unbalanced mind.

**STURMER, BORIS.** A Russian statesman, became premier Feb. 1, 1916, succeeding Goremykin. His ministry fell in November, 1916, because of its reactionary tendency and prejudice on account of Stürmer's German origin. Stürmer was succeeded by Alexander Trepoff. See RUSSIA, *History*.

**STYRIA.** A crownland of Austria. The area is 8658 square miles; population in 1910, 1,444,157.

**SUBMARINES.** Like those of other types of naval vessels the dimensions of submarines were steadily increasing in 1916. In all navies, experience had shown the vast improvement in efficiency effected by enlarging the tonnage to 800 or more. In craft of that size, reasonable habitability and good sea-keeping qualities are possible. Smaller boats were being relegated to coast defense and operations of limited range from a fixed base. For independent cruising and

accompanying the scouts and battle fleet, submarines of 1500 to 2500 tons were under construction, because boats of less size cannot be given adequate sea-keeping qualities at fleet speed. Some of the German boats completed in 1916 were said to have the following characteristics: displacement (submerged), 2400 tons; length over all, 279 feet; beam, 26.25 feet; depth (excluding conning tower), 19.7 feet; surface horse power, 7000; surface speed, 22 knots; submerged speed, 14 knots; cruising radius, 6500 miles; supplies carried for six to eight weeks; 8 to 10 torpedo tubes for torpedoes of 21.65 inches in diameter; 4 to 8 guns, some anti-air-craft; covered bridge and conning tower; 2 collapsible boats; 18 tons of lead ballast; height of conning tower, 13 to 16 feet; complement, 3 or 4 officers, 2 or 3 machinists, 1 medical officer, 40 to 50 petty officers and men. The hull was double, the inner and outer skins strongly bound together.

The British submarines of the *F* class, which were not all completed, were of about 1200 tons submerged displacement, had Diesel engines of 5000 horse power for surface running and electric motors of 2000 horse power for submerged propulsion. The speed was said to be about 20 knots. The new boats of the *G* class (none completed so far as known at the end of 1916) were of 1500 tons submerged displacement, 6500 horse power on the surface, and 2400 horse power submerged. The designed speed was said to be 24 knots. British boats of the *H* class were in service but it was thought that they were simply improved designs of the *E* type.

The new fleet submarines building for the United States navy were reported to be of 1500 to 1800 tons displacement and the designed speed was from 20 to 25 knots. Details were being kept secret by the Navy Department.

The French were said to be building a number of submarines of large size as well as others of about 500 tons. The recently completed boats of the *Laplace* type (1070 tons) were steam driven and did not give satisfaction. The new boats, therefore, would probably have Diesel engines. It was reported that Russia had ordered 100 transportable submarines and 50 larger boats from the Submarine Boat Corporation. The transportable boats were 45 feet long and suitable for carriage by rail or on ship-board.

According to German newspapers there were building in Germany in 1916 two or more submergible cruisers of large size. The *Neue Zuercher Post* stated that the details of these boats were as follows: displacement (submerged), 5000 tons; length, 413.4 feet; speed on the surface, 28 knots; speed, submerged, 16 knots; radius of action, 18,000 to 20,000 miles; 30 torpedo tubes; 90 torpedoes; 6 to 8 guns of light and medium calibre in an armored turret which could be raised well above the hull or lowered into it; and 125 to 150 contact mines. All this might be correct; such vessels might be building; but the publication was so open, so much at variance with the ordinary German methods in regard to new weapons of war, that the statements were not looked upon without suspicion. Moreover, the necessary weights were so large as to lead to the conclusion that at least the speeds and cruising radius were too high. The weight of machinery for 28 knots on the surface and 16 knots when

### GERMAN SUBMARINES OF 1916

submerged could not be less than 850 tons if ordinary storage batteries were used for submerged propulsion; and the fuel supply for 18,000 miles at 10 knots for a vessel of 3000 tons (assumed surface cruising displacement) would be over 600 tons. The other necessary weights (including armored conning tower and turret, turret-elevating apparatus, guns and mounts, ammunition, torpedo tubes, torpedoes, and the ordinary equipments and fittings of a submarine) could not be less than 500 tons. The available weight for the hull would then be less than 1050 tons, which is impossible for a double-hulled vessel of the dimensions given. If the cruising displacement is more than 3000 tons the weights of all kinds are much increased—especially those of the machinery and fuel.

At the outbreak of the war all nations were experiencing difficulty with the speed question. Diesel engines of adequate power and satisfactory performance in large submarines had not been produced. The limit of power per cylinder had not materially changed, but engines of many cylinders were built in a manner to give satisfaction. In the new German boats of 2400 tons there were said to be four engines of eight cylinders each with a total horse power of about 7200. The best steam machinery with geared turbines gives a higher efficiency per pound, but it has apparently ineradicable defects that unfit it for submarine propulsion. Another obstacle to higher speed in submarines has been the great weight absorbed in the storage battery equipment for power when submerged.

There have been many attempts to do away with the double set of machinery required by existing arrangements, but the first to give much promise of success is the Neff system under trial in 1916 in the United States navy. In this, Diesel engines alone are used and, when submerged, the products of combustion are carried outboard and discharged without contaminating the air in the boat. A small boat was built and tried and one of 250 tons ordered, its acceptance depending on satisfactory performance. If the Neff system was a success it would permit great improvement in submarine navigation.

The periscope is the subject of many experiments looking to its improvement. According to a Dutch report that came via England, some new German boats were built without periscopes and yet, by an arrangement of lenses in the sides of the conning tower, the operator was able to see without any part of the boat projecting above water. The description of the arrangement was vague and its existence doubtful. The reports might have been formulated to give unpleasant reading and disturbing thoughts to Germany's enemies. The greatest modern improvement in periscopes up to 1916 was effected by Professor Parodi and patented somewhat more than two years previous. It was possible that a new form of this instrument might have been the foundation of the Dutch report. Professor Parodi's invention consisted of a circular glass ring of prismatic section at the top of the periscope tube, the external surface of the ring being toroidal. By means of suitable lenses the rays, totally reflected in the prismatic ring, were carried down the periscope tube, where, by means of another ring, they were thrown on a circular mirror of large diameter surrounding the foot of the peri-

scope tube. An observer in the centre of this mirror was thus able to see the horizon as it appeared to a person on deck. For convenience in determining directions, a transparent compass card throws its markings on the screen below the reflected horizon.

For mine-planting, the Germans are building submarines of special type. One of these, the *UC-5*, was captured by the British. It carried 16 mines in inclined tubes, loaded from the deck and open to the sea at the lower end. Two mines were in each tube, one above the other, and were separately let go by means of trippers in the conning tower. Mine-planting on the enemy's coast was greatly facilitated by the use of such craft, for their operations could not be observed.

The British and French orders for merchantmen and others to ram submarines if possible were said to have brought out a new invention by the Germans. Dummy periscopes were placed on mines with the idea of inviting the enemy to effect his own destruction. See **BATTLESHIPS; NAVAL PROGRESS.**

**SUBWAYS.** See **RAPID TRANSIT.**

**SUDAN, ANGLO-EGYPTIAN.** A country in Africa, under the joint administration of the British and Egyptian governments. Lying south of Egypt, it extends westward from the Red Sea, Eritrea, and Abyssinia to Wadai and the Belgian Congo. Estimated area, 984,520 square miles; estimated population in 1914, 3,380,531. Khartum, with (1916) 23,083 inhabitants, is the capital. Opposite the capital, on the Blue Nile, is Khartum North, with (1915) 15,973 inhabitants. Omdurman, on the White Nile, the former Mahdist capital, has 59,429. An increasing number of West African tribes are settling in the Sudan and as they are hard-working and law-abiding their advent is regarded with favor. Vernacular and industrial schools have increased in number, but are still insufficient. The natives are being educated in modern methods and show great aptitude. Under cultivation in 1914 were 2,096,835 feddans, of which 116,010 were artificially irrigated, and 1,980,825 irrigated by the river at flood and by rain. The total imports were valued in 1915 at £1,679,805; exports, £1,577,991. These figures include specie. Dura (African millet) was exported in 1915 to the value of £274,199; gums, £313,081; cotton, £236,793; ivory, £48,132. The revenue for 1915 was estimated at £1,490,000; expenditure, £1,470,000. There are about 1500 miles of railway in operation. South of Khartum communication is established by boats on the Blue Nile, the White Nile, Sobat, and Bahr-el-Ghazal; inland, mainly by camels and donkeys.

**SUFFRAGE.** See **ELECTORAL REFORM; WOMAN SUFFRAGE.**

**SUGAR.** There was an increase in the world production of sugar in 1916, estimated at about 953,000 tons over 1915, but the amount was not equal to that before the outbreak of the European war. Usually high prices maintained. The total output, as estimated by Willett and Gray in December, was 17,545,260 tons. Of this, 11,410,260 tons were cane sugar and the balance beet sugar. The European production of beet sugar was 5,275,000 tons, that of the United States 846,000 tons, and of Canada 14,000 tons.

In continental United States the cane sugar production was double that of 1915—253,000 tons, and there were increases in the crop of Porto Rico, bringing it up to 450,000 tons, and in Hawaii to 675,000 tons. The Cuban crop was the largest on record—3,400,000 tons, as compared with 3,007,915 in 1915 and 2,592,667 in 1914. The production in the principal other countries, as reported by Willett and Gray, was as follows: British West Indies, 175,000 tons; French West Indies, 80,000; Danish West Indies, 12,000; Dominican Republic, 150,000; Mexico, 50,000; Central America, 25,000; Demerara, 120,000; Peru, 200,000; Argentina, 175,000; Brazil, 225,000; Surinam and Venezuela, 30,000; British India, 2,400,000; Java, 1,595,260; Formosa and Japan, 430,000; Philippine Islands, 220,000; Australia, 200,000; Fiji Islands, 110,000; Egypt, 100,000; Mauritius, 220,000; other African countries, 210,000; and Spain, 6000.

The provision in the Underwood Tariff Law by which sugar was eventually to go on the free list, was rescinded by Congress during the year by a very large majority vote.

The sugar-beet curl, an affection of the leaf attributed primarily to the sting of an insect, has become a serious menace to the industry in California and some other Western States. In 1915, 50,000 acres of beets belonging to the Spreckles' interests were so badly affected that no attempt was made to harvest them. Early planting helps to avoid the trouble, as the beets will grow at a lower temperature than the insect.

The flooding of the German market with beet sugar the first year of the war was followed in 1915 by a reduction of over 30 per cent in the area and a large decrease in the production per acre. The increased sugar consumption by man and animal led to the surplus being replaced by a scarcity of sugar, and to remedy this an order was issued early in 1916 increasing the price of raw sugar, which was expected to have the effect of stimulating beet growing.

Switzerland has experienced trouble in securing sugar, as very little is grown and imports are difficult. In February, all stocks of sugar were taken over by the government, which reserved the right of importation. Attempts have been made in Great Britain to establish the sugar beet industry, in view of the present state of the sugar supply. A society of Serbian engineers has organized trial sowings of sugar beets in Serbia, to ascertain the possibility of developing a sugar industry in that country. It is planned to continue the experiments for three years.

Quite an industry is being built up in Utah in the growing of commercial sugar beet seed. In 1915 the trials of one concern on 80 acres gave good profits. A company has been organized which will grow 5000 acres of beets for seed and will supply, it is thought, all the seed needed by one of the large organizations. Others are entering into seed production.

**SUGAR BEETS.** See SUGAR.

**SULPHUR.** The production of sulphur in the United States in 1915 was derived from Louisiana, Texas, Nevada, and Wyoming. In the two last States only small quantities were produced. Over 95 per cent of the whole came from the Union Sulphur Company in Louisiana and the Freeport Sulphur Company in Texas. As reports from these companies are confi-

dential it is not possible to give the output in figures. They will be found in the table of mineral productions of the United States. The stocks of sulphur on hand at the close of 1915 were the largest in the history of the industry. Imports of sulphur in 1915 amounted to 25,910 long tons, valued at \$472,910. There were exported 80,221 long tons, valued at \$1,579,751.

**SUN.** See ASTRONOMY.

**SUNDAY-SCHOOL UNION, AMERICAN.** A voluntary association of Christians of different denominations, founded for the purpose of teaching, especially to the young, the fundamental truths of Christianity. It had its origin in the First Day Society, founded in Philadelphia in 1791, but its present name was assumed in 1824. Its propagandist and executive work includes the circulation of Bibles, New Testaments, and other religious literature, and the founding of Sunday schools. In 1916 it published 10 periodicals and over 1000 books on religious subjects and Sunday schools. Its Sunday school missionaries established, between 1824 and 1916, an average of four new Sunday schools per day. It expends about \$250,000 annually in its organizing and missionary activities. Its officers are: Martin L. Finckel, president; Clarkson Clothier, and Dr. James F. Stone, vice-presidents; William H. Herst, recording secretary; John E. Stevenson, treasurer. The hundredth anniversary will be celebrated in May, 1917. The chief offices are at Philadelphia, Pa.

**SURETY INSURANCE.** See INSURANCE.

**SURGERY. WAR WOUNDS.** The treatment of wounds in the European war is well summed up in the report of Dr. Proust, who is a member of the *Faculté de médecine de Paris* and a hospital surgeon. He has laid before the *Société de chirurgie de Paris* an interesting report based on 18 months of work in ambulances at the front. He first takes up the question of projectiles themselves. In the earliest part of the war most of the wounds were bullet wounds, with only slight infection of the tract. After these came shrapnel and shell fragment wounds. Later the trench warfare produced bullet wounds inflicted at close range and showing explosive effects. Still later there occurred more serious anatomic destruction caused by the frequent use of torpedoes, hand grenades, and high explosives. With regard to infection, Proust remarks that the gravity of the wounds in the early part of the war was more particularly due to defects in the organization of the medical service. Later it was attributed to the nature of the projectiles, to the multiplicity of wounds in a single patient, and to winter conditions in the trenches. From May 5, 1915, to Feb. 5, 1916, 10 months, surgical ambulance No. 1, which was under Proust's direction, cared for 1800 wounded. All the wounds were serious. Of the 1800 wounded, 419 died, a mortality of 23 per cent. This high mortality is explained by the fact that the wounds are always infected. Infection may come from the projectiles or from fragments of clothes. The latter, being impregnated with filthy mud, are particularly dangerous. The tissues are torn and contused. The muscles which are injured are liable to gangrene, and this may, in part, be explained by the lowering of vitality in them produced by fatigue and exhaustion. To these conditions should be added vascular lesions, very often of the veins, due probably to the explosive action of projectiles. These are the principal

reasons for the gravity of the wounds, and from them indications for treatment must be drawn. An irregular bullet track must be transformed into a clean operation wound by free exploration. Proust drew special attention to certain points. In view of the frequency of tears of the venous trunks, he recommends ligature of the vessel outside the primitive lesion above and below and the removal of the injured section. The same is true of arterial lesions. The most serious factor is the injury of bone. Free fragments may be removed, but others must be treated cautiously. As to joint wounds, Proust advises that every articulation that has been penetrated by a projectile other than a bullet must be freely opened. Drainage should be assured even if it is necessary to perform a resection, such as that of the patella or astragalus. In nerve injuries, operative indications are exceptional. Immediate suture has been done twice in Proust's ambulance. For dressings he has recently employed almost exclusively Dakin's solution (q.v.). For fresh superficial wounds or for such wounds as result from circular amputation, herpetic salt solution, 14 per cent, is the ideal topical application. It opposes putrefaction of the tissues, but its use should not be too prolonged and it should soon be replaced by solutions of magnesium chlorid, which seem to have a stimulating effect on tissue regeneration. In the presence of badly infected lacerated wounds, refractory in spite of free opening, the best results were derived from Carrel's method, that is to say, discontinuous irrigation with fresh Dakin's solution. If the infection is characterized by a reddish color of the tissues and bronzed infiltration, Proust substitutes ether for Dakin's solution. Thanks to this careful selection of topical applications, local accidents, such as diphtheria of the wounds, excessive supuration, etc., have become a thing of the past. Unfortunately there exists a class of infections against which the surgeon is helpless. These are the massive primitive infections. In some wounded soldiers there is observed, a few hours after the injury, a high temperature, a pulse scarcely perceptible, and hippocratic facies, contrasting strongly with the appearance of general well-being or even of excitement often seen in wounded soldiers. Left to themselves such patients die in from 24 to 36 hours. The wounds have often a gangrenous smell; the freest opening is useless. Amputation alone can save life, and then only if it is rapidly performed so as to avoid shock.

**SWAMP FEVER.** See VETERINARY MEDICINE.

**SWAMP LANDS.** See DRAINAGE.

**SWANSON, CLAUDE AUGUSTUS.** Re-elected Democratic United States Senator from Virginia Nov. 7, 1916.

**SWARTHMORE COLLEGE.** A non-sectarian co-educational institution at Swarthmore, Pa. It was founded in 1864 by the Society of

Friends (Quakers). In all departments in the fall of 1916 there were 448 students. The faculty numbered 47. Among a number of new appointments during the year the most important was that of Dr. Ethel Hampson Brewster as assistant professor of Latin. Before the close of 1916 \$400,000 had been subscribed toward a Jubilee Fund, in anticipation of the Jubilee Year of the college in 1919. Swarthmore has in productive funds about \$1,500,000. The library contains 32,500 volumes. President, Joseph Swain.

**SWAZILAND.** A British protectorate in southern Africa, covering 6536 square miles and having a population of 99,959. Capital, Mbabane.

**SWEDEN.** A constitutional European monarchy hereditary in the male line of the house of Bernadotte. It occupies the eastern part of the Scandinavian Peninsula. Capital, Stockholm.

**AREA AND POPULATION.** The land area is 158,692 square miles; the combined area of land and water, 173,008 square miles. The total population was estimated Jan. 1, 1915, at 5,679,607. Total population 1910, 5,522,403; 1900, 5,136,441; 1880, 4,565,668; 1840, 3,138,887. Marriages 1914 numbered 32,845, living births 120,451, deaths 78,189—a surplus of births over deaths of 51,262. Total emigration in 1914, 12,960, of which 9589 to the United States. A table of principal towns, with population at the beginning of 1915, follows:

Stockholm	386,270	Karlstad	18,673
Göteborg	181,500	Halmstad	18,527
Malmö	108,004	Sundsvall	16,668
Norrköping	45,984	Lundakrona	16,555
Gävle	35,937	Kalmar	15,917
Hälsingborg	85,235	Uddevalla	18,261
Orebro	33,780	Södertälje	12,808
Eskilstuna	29,167	Falun	12,068
Karlskrona	28,127	Ystad	11,998
Jönköping	28,069	Kristianstad	11,853
Uppsala	27,773	Söderhamn	11,591
Linköping	24,966	Västervik	11,007
Västerås	23,227	Nyköping	10,781
Borås	23,158	Trälleborg	10,788
Lund	22,578	Visby	10,061

**EDUCATION.** Elementary schools are maintained by local taxation with state aid. Elementary instruction is free and obligatory. Illiteracy is not common. The secondary and special school systems are well developed. There are universities at Lund and Uppsala, as well as private faculties. The Lutheran is the national creed; all others are tolerated, Mormonism excepted.

**PRODUCTION.** The northern regions are under forest; in the central districts are the majority of the mines; and the southern part is devoted to agriculture, in which about 49 per cent of the people are engaged. In the table below are given area devoted to principal crops, and production for three years:

Crops	Acres		
	1918	1913	1914
Wheat	259,597	287,583	269,255
Barley	436,202	441,488	435,708
Oats	1,951,300	1,973,678	1,958,908
Rye	788,000	910,893	980,868
Mixed grain	712,243	422,741	414,787
Beans	9,386	5,187	6,274
Peas	43,719	55,822	37,106
Potatoes	375,440	383,270	375,736

Crops	Quarters		
	1918	1913	1914
Wheat	948,716	1,138,328	1,016,881
Barley	1,654,744	1,923,591	1,402,019

Crops	Quarters		
	1912	1913	1914
Oats	9,194,281	10,122,647	5,429,825
Rye	2,825,816	2,727,038	3,802,647
Mixed grain	1,967,797	2,286,213	1,210,172
Beans	21,072	19,216	8,869
Peas	127,222	155,375	88,841
Potatoes *	68,732,900	85,465,875	71,678,475

\* Bushels.

Forests cover half of the total area, and supply timber, pitch, tar, and fuel. Pine, birch, and fir are most abundant. The mineral wealth is great. Coal is mined; an excellent grade of iron (Dannemora) is converted into the finest steel made; gold and silver are produced in small quantities, and copper, lead, zinc, nickel, cobalt, alum, and sulphur are mined. Output of copper ore in 1914, 8839 tons; silver and lead ore, 3100; zinc, 42,279; manganese, 3643; sulphur pyrites, 33,313; coal, 366,639; iron, 6,588,300. Iron ore exported (1914), 4,787,314 tons; pig iron, 175,400. Total pig iron produced, 639,718 tons; bar iron, 441,060. There were (1913) 1053 saw and planing mills (value of output 216,130,514 kronor), 411 joineries and furniture factories (31,155,281 kr.), 119 wood-pulp mills (104,592,443 kr.), 68 paper and pasteboard mills (68,982,890 kr.), 619 flour mills (117,979,743 kr.), 307 iron and steel works (51,232,524 kr.), 564 machinery factories (185,988,800 kr.), 20 sugar mills (33,685,372 kr.), and 10 refineries (73,256,244 kr.), etc. Live stock (1913): 596,136 horses, 2,720,748 cattle, 988,163 sheep, 967,687 swine.

COMMERCE. In thousands of kronor are shown below imports and exports, including precious metals:

	1907	1909	1911	1913	1914
Imports	682,105	616,806	696,617	846,538	726,908
Exports	524,668	472,980	663,576	817,847	772,855

The principal classes of imports and exports in the 1914 trade, with values in kronor, are given as follows:

	Imports	Exports
Textile mfrs.	53,923,890	9,864,326
Corn and flour	51,611,601	6,446,744
Colonial wares	50,780,416	1,697,978
Raw textile material and yarn	67,584,283	10,612,476
Minerals	125,999,727	71,245,208
Metal goods, machinery, etc.	89,717,849	92,210,652
Live animals and animal food	24,249,573	115,988,521
Hair, hides, etc.	38,305,721	24,816,020
Metals, raw and partly wrought	47,711,121	71,430,185
Timber, wrought and unwrought	12,097,449	174,968,260
Wood pulp, paper and mfrs.	4,786,682	137,623,511
Various	160,139,561	55,451,192
Total	726,907,873	772,855,078

The important countries of origin and destination in the 1913 and 1914 trade are shown below, values in thousands of kronor:

	Imports		Exports	
	1913	1914	1913	1914
Germany	289,902	238,550	179,078	174,840
United Kingdom	206,801	183,808	235,535	258,319
United States	76,583	78,076	34,408	41,208
Russia	50,520	23,783	46,978	48,457
Denmark	53,680	51,647	70,651	72,850
France	35,284	28,880	66,260	32,688
Norway	25,928	29,036	54,034	48,882
Netherlands	20,884	19,303	19,225	18,700
Belgium	13,398	8,936	18,598	8,243
Spain	3,966	3,028	11,219	11,707

Vessels entered in the 1913 trade, 22,519, of 12,705,000 tons; cleared, 22,486, of 12,709,000. Merchant marine, Jan. 1, 1914, 1509 sailing, of 151,867 tons, and 1313 steamers, of 721,339—total, 2822, of 873,206 tons.

COMMUNICATIONS. There were, at the end of 1914, 9094 miles of railway lines, of which 2971 were operated by the state and the remainder by private companies.

FINANCE. The krona is the monetary unit (worth 26.8 cents). Revenue in 1916 from customs, 73,600,000 kr.; excise, 72,500,000; tax on income, invested capital, etc., 40,850,000; personal tax, 850,000; revenue-earning administrations, 55,915,000; from loans, 53,675,000; state bank profits, 8,760,000, etc. Ordinary and, in parenthesis, extraordinary expenditure as follows: 58,789,189 (45,334,511) kronor for army, 24,266,350 (16,204,250) marine, 13,628,638 (13,914,562) interior, 24,193,774 (3,793,426) finance, 33,652,384 (5,208,716) worship and instruction, 8,316,341 (4,608,959) agriculture, 6,791,996 (3,637,740) pensions, 5,423,792 (843,908) justice, 1,838,781 (198,819) foreign affairs, 1,345,000 civil list; total ordinary and extraordinary, 400,682,400 kr.

GOVERNMENT. The constitution on June 6, 1809, as amended June 22, 1866, vests the executive authority in a king, assisted by an executive council. The upper chamber of the legislative body (Riksdag) is composed of 150 members elected for six years by provincial and communal electors; the lower has 230 members elected for three years.

The reigning king, Gustaf V, was born June 16, 1858; he married Sept. 20, 1881, Princess Victoria of Baden, and succeeded his father to the throne Dec. 8, 1907. The heir-apparent is Prince Gustaf Adolf, born Nov. 11, 1882, married June 15, 1906, to Princess Margaret of Great Britain and Ireland; issue, three sons and a daughter.

HISTORY

SWEDEN AND THE BLOCKADE. There was much ill-feeling in Sweden on account of the blockade, and against England particularly for interfering with Swedish mail and commerce. By way of retaliation, Sweden in January held back a large quantity of British mail destined for Russia. The Riksdag opened on January 17th. In a speech from the throne, the King urged the strengthening of Swedish military forces to protect the country against violation of her rights as a neutral. Much comment was occasioned by Premier Hammarckjoeld's public suggestion in his speech of January 24th that Sweden might be drawn into the war. He gave it to be understood that Sweden did not sympathize with certain of the other neutral powers, especially Denmark and Norway, in their policy of favoring the Entente Allies at the expense of the Central Powers. He thought that Norway and Denmark were not taking sufficient safeguards against the economic encroachments of the Entente Allies, and he said that it was possible that Sweden would not remain indefinitely neutral. The discussion in Parliament brought out vigorous opposition to the Entente Powers. Relations were further strained by Russia's fortification of the Aland Islands (see below), but on May 17th the Foreign Minister, Wallenberg, announced that that crisis was passed. At about

the same time the grievances against England were reported to have been adjusted in a friendly manner, and in the latter part of June Sweden agreed to submit to arbitration after the war the question of the legality of her seizure of British mail. The party that agitated against the Entente Powers, and on behalf of a vigorous military policy, were known as "Activists." Under their impulse, the Riksdag passed a military appropriation amounting to 104,000,000 kronor.

**ALAND ISLANDS.** According to the North Sea Baltic Treaty with Russia in 1908 the Aland Islands were not to be fortified or used for any military purpose whatever. On the outbreak of the war in 1914 the question of fortification was raised, since the islands formed a natural barrier between the Baltic and Gulf of Bothnia, and afforded a naval base at the entrance of the Gulf of Finland. On May 17th, the subject was discussed in the Riksdag, and it was announced that the danger of Swedish entry into the war had passed. France and Great Britain procured from Russia assurances that if the islands were fortified it would be only for the present war, and that military works would be removed when the war ended. Better relations between Sweden and Great Britain followed this intervention, and arrangements were made looking to mutual concessions and the extension of trade.

**FURTHER DIFFICULTIES WITH THE ENTENTE POWERS.** The question of neutrality was again raised by Sweden's course on July 22nd, which was described by the Entente Powers as virtually closing the Baltic to their ships, since it reserved to Swedish vessels alone the only course by which non-Swedish vessels could pass from the Sound into the Baltic under shelter from German attack. The Entente governments addressed a remonstrance on that subject to Sweden on August 30th and the latter replied on September 22nd. Her response was regarded as conciliatory, and a further indication of an intention to deal fairly by the Entente Allies was Sweden's adherence, along with Denmark, to the Norwegian policy, announced on October 13th, in respect to violations of neutrality by submarines. On that date the Norwegian government had issued a decree forbidding belligerent submarines to use Norwegian waters as a base of operations for attacks on the enemy, a practice hitherto followed by the Germans.

**SWEET, JOHN EDSON.** An American mechanical engineer and manufacturer, died in Syracuse, N. Y., May 8, 1916. He was born at Pompey, N. Y., in 1832, was educated in district schools, and after experience as a carpenter's apprentice, practiced as an architect and builder in the South till 1861. Then until 1873 he devoted himself to work as an inventor and mechanical draftsman; for six years after this he held the chair of practical mechanics at Cornell University; and from 1880 till his death was president of the Straight Line Engine Company of Syracuse. Mr. Sweet was honored in many ways for his achievements. He was the first president of the Engine Builders' Association of the United States (1899-1901), had been presi-

dent of the American Society of Mechanical Engineers in 1883-84, and held similar office in the Syracuse Metal Trades Association and the John Fritz Medal Association. In 1914 he was awarded the 10th John Fritz medal. In 1906 he published *Things that are Usually Wrong.*

**SWIMMING.** The swimming season of 1916 was noteworthy for the large number of records established. Seventeen new marks were made by men and 11 by women. In long distance swimming all previous records went by the board due to the efforts of Henry Sullivan of Lowell, Mass., who swam 20 consecutive hours; Charles Durborow of Philadelphia, Pa., who covered 36 miles in the Delaware River in 13 hours, 13 minutes; and Miss Anna Kean of Lansdowne, Pa., who swam 26 miles in 11 hours, 8 minutes, 45 seconds.

The sprint honors for the year were won by Perry McGillivray of the Illinois A. C. and Miss Olga Dorfner of Philadelphia, Pa. Herbert Vollmer of Columbia University captured the 200-yard title in the world's record time of 2 minutes 23½ seconds in a 75-foot pool. Miss Dorfner annexed the 50 and 100 yards championships for women in the record times of 30½ seconds and 1 minute 8½ seconds. Ludy Langer of the Los Angeles A. C. proved the best at the middle distances, setting up new world's figures for the 500- and 1000-yard events.

The Illinois A. C. successfully defended its title in water polo and relay racing, defeating the New York A. C. team in both contests.

**SWINE.** See **STOCK RAISING AND MEAT PRODUCTION.**

**SWITZERLAND.** A central European republican confederation composed of 25 cantons and demi-cantons. Berne is the capital.

**AREA AND POPULATION.** In the table below are found the area and the *de jure* population of the 25 divisions; area in square kilometers, population as estimated July 1, 1913:

	Sq. Km.	Pop.
Zurich .....	1,724.76	584,250
Berne .....	6,844.50	660,640
Lucerne .....	1,500.80	172,500
Uri .....	1,076.00	22,780
Schwyz .....	908.26	56,210
Obwalden .....	474.80	17,650
Nidwalden .....	290.50	18,980
Glarus .....	691.20	33,570
Zug .....	289.20	28,940
Fribourg .....	1,674.60	142,690
Solothurn .....	791.51	121,240
Basel-Stadt .....	85.76	142,870
Basel-L'dt .....	427.47	78,550
Schaffhausen .....	294.22	47,270
Appenzell A.-Rh. ....	242.49	58,070
Appenzell I.-Rh. ....	172.88	14,860
St.-Gall .....	2,019.00	315,160
Graubünden .....	7,182.80	119,860
Aargau .....	1,404.10	286,860
Thurgau .....	1,011.60	140,540
Tessin .....	2,800.90	160,680
Vaud .....	3,252.00	827,870
Valais .....	5,224.00	180,750
N'châtel .....	807.80	134,910
Geneva .....	282.35	160,960
<b>Total .....</b>	<b>41,323.99</b>	<b>3,877,210</b>

Total population in 1910 (census), 3,753,293, of whom those speaking German as their native tongue numbered 2,599,194; French, 796,220; Italian, 301,323; Romansh, 39,912; other languages, 28,172. Protestants numbered 2,108,642, and Roman Catholics, 1,590,832. The number of marriages in 1913 was 26,841 (27,346 in 1910), births 92,603 (96,669), deaths 58,273

(59,653), stillbirths (included) 2846 (3155). Emigration in 1914, 3869 (5512 in 1911), of whom 2890 went to the United States, 367 to Argentina, 251 to Canada.

The communal population of Zurich, as estimated in the middle of 1913, was 200,600; Basel, 137,500; Geneva, 135,000; Berne, 90,800; St. Gall, 80,000; Lausanne, 69,400; Lucerne, 41,500; Chaux-de-Fonds, 38,600; Winterthur, 25,800; Neuchâtel, 24,100; Bienne, 24,000; Fribourg, 21,200; Montreux, 19,700; Schaffhausen, 18,600; Vevey, 14,000.

**EDUCATION.** Primary instruction is free and in the Protestant cantons enforced. The cantons and communes are responsible for educational affairs within their limits. There are efficient secondary and private schools, well attended; and seven universities.

**PRODUCTION.** For the bulk of food products consumed, Switzerland is dependent on her imports. Of the 71.6 per cent of the total area classed as productive, 35.8 per cent is under grasses, 29 per cent under forest, 18.7 under orchards, etc., and 16.4 under sown crops. The area under main crops and the yield for two years appear in the table below, with yield per hectare in 1915:

	Hectares		Quintals		Qs. ha.
	1916	1915	1916	1915	
Wheat	50,000	45,950	1,040,000	1,077,000	28.4
Rye	28,900	26,900	508,000	523,000	19.4
Barley	7,100	6,500	134,000	128,000	19.7
Oats	41,800	37,300	979,000	814,000	21.8
Corn	1,500	1,860	38,500	35,000	25.7
Vines*	21,185	21,600	484,000	871,000	40.8
Tobacco	250	250	4,750	4,800	17.2
Potatoes	78,000	64,500	6,000,000	10,800,000	167.4

\* Production in hectolitres.

Cheese, condensed milk, and milk chocolate are important products for export. The timber industry, pisciculture, salt mining, cement manufacture, and distilling are flourishing industries. Great numbers of men and women are engaged in house industries, which include the making of watches and clocks, leather goods (including gloves), pottery, tobacco, snuff, etc. About 60,000 persons are employed in silk and cotton mills. See DAIRYING.

**COMMERCE.** Imports and exports of merchandise and precious metals are given below in francs:

	1911	1913	1914
Imports	1,843,843,263	1,919,816,000	1,461,638,000
Exports	1,288,838,217	1,376,399,000	1,186,871,000

The principal articles of import for consumption and of export of domestic produce are shown in the table below, values for 1914 in thousands of francs:

Imports	1000 fr.	Exports	1000 fr.
Cereals, etc.	188,000	Cottons	213,633
Silk	153,966	Watches	120,813
Coal	109,822	Silk	258,644
Animals	31,946	Machinery	74,974
Cottons	92,196	Cheese, etc.	119,700
Chemicals	38,273	Chemicals	19,088
Precious metals	62,664	Silk mfrs.	258,644
Woolens	52,339	Hides	47,061
Cotton	92,196	Iron mfrs.	28,441
Wine	46,583	Woolens	21,077
Meat	67,491	Animals	11,597
Machinery	84,592	Col. prods.	56,187
Timber	27,775	Clothing	19,987
Iron mfrs.	76,857	Precious metals	11,915
Wool	52,339	Minerals	12,340
Leather	33,258	Timber	7,043

The principal countries of origin and destination, with the value of their trade in 1913 expressed in thousands of francs, are as follows: Germany, 630,870 imports and 305,660 exports; France, 347,985 and 141,250; Italy, 207,025 and 89,153; Austria-Hungary, 108,469 and 78,358; United Kingdom, 112,666 and 236,165; United States, 117,898 and 136,432; Russia, 71,467 and 58,719.

**COMMUNICATIONS.** The electrification of the St. Gothard Railway by the Swiss government was in progress during 1916 and about \$600,000 was being spent on the work out of a total estimated cost of about \$7,500,000. The length of line being electrified is about 68 miles. Two power stations were under construction, one at Amsteg utilizing the water of the river Reuss under a head of 900 feet and the other at Piotta where the head of water is 2642 feet and 39,000 horse power will be developed. A single-phase system similar to that used on the Lötschberg tunnel line was recommended for adoption on the new line.

This was said to be the first step in a project which ultimately involved the operation of all the 2000 miles of Federal owned railways by electricity which will make Swiss transportation independent of imported fuel, for no coal is mined in Switzerland.

With the outbreak of the war and the reduction of tourist and freight traffic the Swiss Federal Railway receipts decreased from \$41,055,153 in 1913 to \$35,199,340 in 1914, the approximate decrease during the last five months of 1914 being 30 per cent. The operating expenses also decreased from \$25,722,654 in 1913 to \$24,958,567 in 1914. As a result the surplus in 1914 available for railway reconstruction and the renewal of railway material, as well as for special funds, was therefore only \$10,240,773, as compared with \$15,332,499 in 1913. On October 1, 1916, a surtax was imposed by the Swiss railways upon passenger, freight, and express traffic. Railway tickets from 50 centimes (\$0.0965) to 95 centimes (\$0.1833) paid 5 centimes (\$0.00965) additional; those of 1 franc (\$0.193) and over paid 10 centimes (\$0.0193). Baggage and express charges paid 10 centimes surtax and freight 1 centime per 100 kilos (220 pounds), with a minimum of 10 centimes.

There were in operation in 1914, 3530 miles of railway. About a third of the railways have been nationalized, but they have not proved a profitable enterprise. The cost of construction to end of 1913, 2,139,946,371 francs. Receipts from traffic during 1913, 228,267,224 francs, of which 110,269,793 francs from passenger traffic.

**FINANCE.** The details of revenue and expenditure in the 1915 budget are seen in the following table:

Revenue	1000 fr.	Expenditure	1000 fr.
Customs, etc.	60,784	Military	36,004
Investments	3,725	Interior	13,830
Military	4,494	Ind. and agr.	12,217
Posts and Rys.	44	Customs, etc.	9,943
Real property	2,791	Debt charge	10,057
Ind. and agr.	1,941	Justice, etc.	1,584
Justice, etc.	616	Administration	1,536
Interior, etc.	6	Political	1,825
Administration	118	Posts and Rys.	12,947
Political	525	Miscellaneous	47
Miscellaneous	1,496		
<b>Total</b>	<b>76,490</b>	<b>Total</b>	<b>99,990</b>

The debt stood, Jan. 1, 1916, at £16,220,800; floating debt, £4,220,000.

On December 14th Edmund Schulthess was elected president to succeed Camille Decoppet.

#### HISTORY

**NEUTRALITY.** The difficulty of maintaining neutrality was frequently illustrated during the year. There were some anti-German demonstrations but they were promptly suppressed. At Lausanne, for example, a flag hoisted in honor of the Kaiser by the German consul was torn down by the mob, who successfully resisted the efforts of the police to protect it. Extraordinary meetings of the Federal Council and of the councils of Lausanne and Vaud were held for the purpose of reparation, and an apology was tendered by the Swiss minister to the Berlin government, by which it was promptly accepted. On January 13th two officers were arrested on the charge of high treason for the transmission of telegraph messages from one group of belligerent powers to the other and for the betrayal of Swiss military secrets to the Central Powers. The case attracted much attention. The trial resulted in their acquittal on this charge, but they were returned to their superior officers for disciplinary judgments. The punishment announced on March 1st consisted merely in detention for 20 days. At the end of April nine persons, including several newspaper correspondents, were accused of espionage, but they were acquitted by the court at Berne on March 6th. On March 31st the Federal Council protested against violations of Swiss neutrality by German aviators.

**THE GOVERNMENT AND THE DEPORTATIONS.** In response to many complaints of Swiss citizens, the government took action on behalf of the French non-combatants who had been deported by the Germans from the invaded territory in the north of France. On September 9th the Federal Council offered its good offices to the German government for the passage of any French people through the country on their way back to their homes, and it also, after having been informed of the deportations in Belgium, instructed its ambassador in Berlin on November 21st, to call the attention of the Imperial Chancellor to the unfavorable impression produced on Swiss public opinion by the wholesale deportations of Belgian workmen into Germany. Nothing came of this overture. Toward the end of the year the government was urged by petitioners from the cantons of Geneva, Vaud, and Neuchâtel to protest against the deportations of the Belgians and the French. The Federal Council reported on the subject to the Federal Assembly saying that despite the signature of Switzerland to the Hague Convention, it was not the duty of the Swiss government to investigate the facts of the case on its own responsibility, and still less was it its duty to render a verdict in the matter. Beyond the steps already taken, the Federal Council did not believe that Switzerland, as a neutral country, ought to go. It therefore recommended the rejection of the petition. The President of Switzerland outlined the position of his government on this point to a member of the press. He said it was to the vital interest of Switzerland that she should remain absolutely neutral toward all belligerents. The economic situation of Switzerland was, he

said, very complicated. The people were obliged to work and carry on trade with both belligerents. This difficulty did not exist in other countries and it might easily give rise to serious misunderstanding.

**COMMERCIAL AGREEMENT WITH GERMANY.** On September 28th Switzerland signed a commercial convention with Germany, by which the latter agreed to deliver a certain quantity of her products each month subject to diminution from the necessities of the war, and Switzerland undertook to stop the exportation to the Entente Powers of arms, munitions, and explosives in the making of which German machinery had been employed or into which German raw materials had entered. On October 14th the Federal Council issued an ordinance giving effect to this clause. There was much complaint on the ground that it would throw a large number of workmen out of employment. A meeting of factory owners was held on October 17th to protest against it, contending that the raw materials for ammunition came from the Entente Powers and that Belgian, not German, coal was used. Friends of the Entente Powers argued in the press that Switzerland ought to reduce her shipments to Germany in the same proportion that Germany reduced hers, and that the Entente ought to stipulate in like manner that no products made in Switzerland should be shipped to Germany if any materials from Entente sources entered into their composition.

**OTHER EVENTS.** On March 15th the National Council, after a debate, voted to leave the Council of State in possession of the extraordinary powers conferred upon it and approved the course it had taken since the outbreak of the war. On May 17th an international Socialist conference was held at Kienthal (see **SOCIALISM**). In June another loan of 100,000,000 francs in 4½ per cent bonds was issued, bringing the total loans, including the cost of mobilizing and guarding the frontier and the loan of \$15,000,000 placed in the United States, to 462,200,000 francs. It was issued at 97. On July 5th it was announced that it had been oversubscribed by more than 50 per cent. At about that date it was estimated that since the beginning of the war the Swiss debt had risen from 28 francs to 150 francs per capita. On September 19th the Federal Council decreed a special war profits tax of 25 per cent on all profits realized since Jan. 1, 1915. The National Assembly on December 14th elected as president of the Confederation Edmund Schulthess, of Aargau, who had been at the head of the national department of public economy. He received 176 out of the 189 votes.

**SYRACUSE UNIVERSITY.** A non-sectarian co-educational institution at Syracuse, N. Y. It was founded in 1870 under the auspices of the Methodist Episcopal Church. For the academic year 1916-17 there was an esti-

mated enrollment of 4100 students. The faculty numbered 326. During the year Prof. William H. Mace of the department of history became professor emeritus. A gift of \$300,000 was made by Mrs. Russell Sage to erect the Joseph Slocum Building for the College of Agriculture. The productive funds of the institution amount to \$2,052,781. In 1916 the total income of the university was \$733,630. The library contains 105,600 volumes. Chancellor, James Roscoe Day.

**TARIFF.** Discussion of the tariff figured largely in the political campaign. Both parties held closely to their traditional positions. Republican speakers strongly insisted upon the necessity of increased protection. The industrial depression of 1914 following the enactment of the Underwood-Simmons tariff was pointed to as an indication of the dependence of industrial prosperity upon the protective system. Democratic orators, on the other hand, maintained that the depression following the new law was not peculiar to the United States and that the increase of imports thereunder was confined to goods to which a protective system would in no case apply. They moreover pointed to the great prosperity of the country and the increasing prestige of the United States in international trade, together with the disruption of industry in Europe and the increasing security of American industry. President Wilson specifically declared that, in view of the awful waste of capital and terrible destruction of labor power in Europe and, on the other hand, the unprecedented prosperity of American industry and the unusual opportunity for reaching out to the markets of the world, American business men should feel insulted by any suggestion that their ability to compete in world and domestic markets was dependent on special protection from foreign competitors. Both parties favored the creation of a permanent tariff commission. Moreover, the Democrats, while favoring a tariff primarily for revenue, declared that "tariff rates are necessarily subject to change to meet changing conditions," thus opening the way for modification of rates deemed necessary to protect newly established industries resulting from war conditions. Moreover, the Republicans declared in favor of measures to prevent monopolies and trusts from being able to make "undue exactions" because protected from foreign competition.

On April 10th Secretary of Commerce Redfield transmitted to the Senate an extended statement of the results of the Underwood-Simmons tariff on foreign trade during the fiscal years 1913-14 and 1914-15. This in general showed

that the reduction of rates had not affected American industries adversely, but had in fact stimulated them. In April, also, after several weeks' parleying the clause of the Underwood tariff providing for the free importation of sugar after May 1, 1917, was repealed. The Senate favored the retention of this tax until 1920. The repeal of this proviso retained a source of about \$45,000,000 revenue. In this connection it should be noted that the imports of sugar in the fiscal year 1916 were valued at \$300,000,000, of which one-third came from the American possessions of Porto Rico and Hawaii. Of even greater pertinence is the fact that during 1916 the United States became the greatest exporter of refined sugar in the world.

In the Omnibus Revenue bill passed in September were contained provisions for a special duty of 12 per cent ad valorem on print paper valued at more than five cents per pound. There was also provided a special protective duty on dyestuffs and various chemicals to be in force for five years from date of passage. It was proposed in the House that this latter measure should not go into force until the establishment of peace, but this proposal was rejected. Nevertheless the time limitation was inserted in order to carry out the Democratic doctrine of opposition to a permanent protective system. This same measure established a tariff commission and appropriated \$300,000 for its activities during the fiscal year 1916-17 (see below). Toward the close of the year the increasing deficit in the Federal revenue raised pertinently the question whether increases in tariff rates were not advisable as a means of meeting the increased expenditures for national defense. It was announced that Secretary McAdoo, with the President's approval, was formulating a series of proposed new tariffs for submission to the leaders of Congress. It was suggested that in view of the great volume of importations of rubber and coffee, merely nominal rates on these articles would produce considerable revenue. Restoration of a woolen tariff was also suggested, to apply, not to raw wool, but to woolen products.

**TARIFF COMMISSION.** Following a specific recommendation of President Wilson, a bill for the creation of a tariff commission was introduced in the 64th Congress, first session. On January 25th, in a letter to Representative Claude Kitchin regarding this proposal, President Wilson pointed out that his recommendation represented a change in his own position, and in fact a reversal of the policy of the Democratic party. The tariff board, which had been established in the Taft administration, had been extinguished by the Democrats on the ground of its inexpediency. They opposed particularly the provision that the board should investigate the differences in costs of production at home and abroad. They pointed out that inquiries had shown greater differences between costs of different plants in the United States than between costs in American plants on the average and foreign plants. Hence this later difference was not a proper criterion for rate making. The bill for the creation of a new board gave it power to investigate tariff rates, commercial credits, and unfair competition of foreign industries, including dumping. It was provided that the cost of production division of the Bureau of Foreign and Domestic Commerce and all

records of the previous board should be transferred to the new commission. The commission was given extensive powers in summoning witnesses and otherwise securing information. Nothing, however, was said regarding the investigation of differences in cost of production, nor was the commission instructed to recommend rates to Congress. It was, however, expected to present to Congress from time to time reports of a semi-scientific and non-political nature. This proposal advanced the discussion of tariff problems to a new plane and furnished Democratic partisans with a basis for answering the contention that the cessation of the European war would require a general elevation of tariff duties by the usual congressional methods of log rolling or more or less special favoritism.

**AMERICAN FREE TRADE LEAGUE.** This organization at its annual meeting in July elected Mr. George Haven Putnam as president, to succeed Mr. Harry N. Shepard, who had served the league for 30 years. In a statement issued at that time and signed by the secretary, Kenneth B. Elliman, reference was made to the plans being developed by the various belligerents (see *Abroad* below) in these terms: "These schemes, representing as they do a mediæval, not to say barbaric, policy, may well arouse criticism and alarm on the part of neutral nations." The statement declared that "the efforts of one nation to impose punitive boycotts on another by means of tariff regulations bring no final commercial advantage" and "add to the burdens and distress of the people of both countries." On the contrary, it said, the world's movement before the war was toward closer financial and business relations and efforts to reverse this movement might prove more costly than war itself. The statement laid down as a fundamental principle that it is more profitable, as well as more civilized, to trade with a neighboring state than to crush its independence or undermine its prosperity. It contended "that protection is itself a form of war, that war brings about an extreme of protection, and that freedom of trade constitutes an essential factor towards securing and maintaining the peace of the world."

**ABROAD.** Throughout the year the publicists of England, France, Germany, Russia, and other countries gave earnest attention to the tariff and problems of international trade regulation both during and after the war. It was generally recognized that upon the restoration of peace the present belligerents would be under the necessity of engaging in a spirited contest for the markets of the world. Rumors were persistent that Germany and Austria were formulating plans for an offensive and defensive tariff league or Central European Zollverein to include also Bulgaria and Turkey. Italian and French writers discussed the advisability of offsetting this Teutonic tariff union by a Latin one to include Italy, France, Spain, and their possessions. Representatives of the Allied Powers held a series of economic conferences in Paris in April and July, in Rome in September, and had scheduled one for London in February, 1917. These dealt with a wide variety of economic policies but particularly with trade regulation, international transportation and communication, the creation of an international patent office, and minor matters concerning com-

mercial transactions. The Paris conference in June (noted below) was the most important. In line with these various movements was the proposal for a Pan-American trade league to include all North and South America in a gigantic free and equal trade area as set forth in a bill introduced in Congress by Representative Bailey of Pennsylvania. All of these proposals except the last looked toward the intensification of trade rivalries and the consequent intensification of nationalist sentiments. It seemed evident that, unless the minority opinions in the various countries should somehow gain the ascendancy, all known weapons of trade warfare, including tariffs, reciprocity treaties, bounties, subsidies, and premiums, would be employed on an enlarged scale.

**PARIS CONFERENCE.** By far the most important development of trade policies by the Allied Powers was expressed in the resolutions formulated at the conference of representatives of Great Britain, France, Italy, Belgium, Russia, Japan, Serbia, and Portugal at Paris in June. This resulted from the gradual growth in Great Britain and France of the opinion that some sort of economic entente was necessary in order to restrain the recovery of German prestige in world trade. It was argued that only by checking the growth of economic power in Germany could the threat of a revived militarism be obviated. To in any way contribute to the strengthening of Teutonic trade would, it was said, be to hasten the return of the conditions out of which grew the war.

The proposals of the conference dealt with measures to be taken immediately, those that should operate only during the period of reconstruction after the war, and those that should become permanently effective. As to the first set of measures it was decided to enter upon an immediate and complete boycott of opposed belligerents, this to cover all goods originating in or coming from them and to extend to the subjects of such countries wherever resident. It was determined to so regulate transportation that goods might not reach enemy countries. For the period of reconstruction it was decided to take every possible measure to prevent Germany from recovering her position in international commerce. New tariff treaties would be so formulated as to deprive the Central Powers of the advantage of "most favored nation" clauses; their imports would be specifically restricted and special precautions taken to prevent "dumping" by them. At the same time efforts would be made to develop mutual trade among the Allies so as to reduce dependence upon Germany; and special favors would be extended to the nations devastated by war. Subjects of enemy countries would be prevented from establishing industries inimical to economic independence or national defense. From the standpoint of permanent policy it was recommended that every necessary step be taken by the Allied Powers to render themselves independent of the Central Powers as regards both raw materials and manufactured products by means of government control where necessary, public subsidies, governmental encouragement of scientific research, customs duties, and trade regulations. The Allied Powers were urged to develop interdependence by the perfection of means of transport by land and sea, and communication by mail, telephone, and telegraph,

and by the creation of a uniform system of patents and trade marks.

The proposals of this conference for discriminatory tariffs, economic boycotts, and other trade-war policies, though largely formulated by Bonar Law, one of the British representatives, and afterward formally approved by the British government, failed to win the assent of a large body of leading men in Great Britain and her colonies. The spirit and purpose of the entire set of resolutions was vigorously attacked by such papers as the *Manchester Guardian* and such publicists as Lord Bryce and G. Lowes Dickinson. These objectors pointed out that such policies must react detrimentally upon the interests of British trade and must retard the development of conditions essential to the devoutly desired "Federation of the World." The resolutions, they argued, would, if carried out, continue to divide the world into two hostile camps; natural trade relations would be prevented; and continued irritation would accentuate suspicion and bitterness of international feeling, leading to renewed rivalry in armaments and preparation for new wars. A large group of these opponents drew up a manifesto in which they declared that no grounds had developed for abandoning England's traditional opinion, but that in fact the war had proven the soundness of the free trade policy.

Dominant American opinion was well expressed in the statement of the Free Trade League above noted. The resolutions were in some quarters not taken seriously, being viewed as the result of nervous apprehension rather than sober consideration of economic advantage. It was pointed out that the world is large and that consequently tariff policies must in the long run take account of North and South America, China, neutral parts of Europe, and other parts of the world not at war with whom German trade would be unaffected. Moreover, the geographical position of Russia, even with the Dardanelles open, would force her in her own interests to trade largely with her present enemies. Finally, it was far from clear how a tariff union against the Central Powers could be carried out without necessitating in fact a union against the rest of the world.

Other matter relating to tariff and trade regulation will be found under FINANCIAL REVIEW; and TRUSTS, paragraph *Export Trade*.

**TARKINGTON**, BOOTH. See LITERATURE, ENGLISH AND AMERICAN, *Fiction*, American.

**TARNOWSKI VON TARNOW**, ADAM, COUNT. Appointed Austrian ambassador to the United States in December, 1916. The British government refused an Austrian request for a safe conduct, but when the United States government, through Ambassador Page, said it desired to receive Count Tarnowski, the refusal was withdrawn.

**TASMANIA**. A state of the Commonwealth of Australia, consisting of the island of Tasmania and various smaller islands, most of them in Bass Strait, which separates the state from Victoria. The total area is estimated at 26,215 square miles; Tasmania is thus the smallest of the Australian states, its area being less than 1 per cent of the area of the Commonwealth. The population, according to the census of 1911, was 191,211 (97,591 males, 93,620 females). The increase per cent in the decade 1901-11 was 10.86, in 1891-1901 17.60, in 1881-

91, 26.76. Estimated population June 30, 1915, 198,417. The capital is Hobart, which at the 1911 census had 27,528 inhabitants; including suburbs, 39,937; estimate of Dec. 31, 1914, 39,914.

The executive authority rests with a governor, who is appointed by the crown and is assisted by a responsible ministry. The Parliament consists of two chambers, the Legislative Council (18 members) and the House of Assembly (30 members); members of the Council are elected for six years and those of the Assembly for three. Woman suffrage was granted in 1903. The governor in 1916 (from March, 1914) was Sir William Grey Ellison-Macartney, K.C.M.G.; premier and chief secretary, W. H. Lee. See AUSTRALIA.

**TAXATION**. The most important developments in taxation during the year included the enactment of the Emergency Revenue or Omnibus Revenue bill in Congress, the new Income Tax law of Massachusetts, and various developments regarding the Federal income tax. The new Federal law included a new tax on inheritances, a step which had been strongly urged in the report of the Industrial Relations Commission. As indicated below, various other new taxes were imposed in that measure. In California and Oregon proposals for the enactment of laws establishing the single tax were rejected at the November elections. See also TARIFF and the sections under FINANCIAL REVIEW dealing with the revenue measures of various foreign countries.

**FEDERAL REVENUE**. It became evident early in the year that additional funds would be needed to meet the great expenditures for national defense. The Revenue bill reported in the House July 1st was designed to raise at least \$210,000,000 above previous revenue. But it was at the same time announced that a bond issue of at least \$125,000,000 would be needed to meet the budget of 1916-17 (in December a bond issue of at least \$180,000,000 was contemplated). This measure was finally enacted in September. It imposed additional taxes on incomes, created taxes on inheritance, munitions, and stock, provided various special taxes, and contained provision regarding the tariff (q.v.).

The *Income Tax* sections raised the normal tax from 1 per cent to 2 per cent on incomes above \$4000 for married and \$3000 for single persons, and imposed the following surtaxes: 1 per cent on the amount of net income above \$20,000, but under \$40,000; 2 per cent on net income between \$40,000 and \$60,000; 3 per cent when between \$60,000 and \$80,000; 4 per cent when between \$80,000 and \$100,000; 5 per cent when between \$100,000 and \$150,000; 6 per cent when between \$150,000 and \$200,000; 7 per cent when between \$200,000 and \$250,000; 8 per cent when between \$250,000 and \$300,000; 9 per cent when between \$300,000 and \$500,000; 10 per cent when between \$500,000 and \$1,000,000; 11 per cent when between \$1,000,000 and \$1,500,000; 12 per cent when between \$1,500,000 and \$2,000,000; and 13 per cent on the amount of net income above \$2,000,000. While originally estimated to yield about \$110,000,000, estimates toward the close of the year fixed the yield of this tax for 1916-17 at over \$200,000,000.

The *Inheritance Tax* was as follows: 1 per cent on the amount of net estates under \$50,000; 2 per cent on \$50,000 to \$150,000; 3 per cent on

\$150,000 to \$250,000; 4 per cent on \$250,000 to \$400,000; 5 per cent on \$450,000 to \$1,000,000; 6 per cent on \$1,000,000 to \$2,000,000; 7 per cent on \$2,000,000 to \$3,000,000; 8 per cent on \$3,000,000 to \$4,000,000; 9 per cent on \$4,000,000 to \$5,000,000; and 10 per cent on the amount of net estates over \$5,000,000. This was variously estimated to yield in the neighborhood of \$50,000,000.

The *Munitions Tax* imposed 12½ per cent on the net profits of the manufacture of all kinds of explosives and military supplies including electric motor boats and submarines. This tax is to be in force for one year after the end of the European war.

A *Stock Tax* of 50 cents for each \$1000 of capital, surplus, and undivided profits of corporations and joint stock companies with capitalization above \$99,000 was imposed. The copper tax imposed the following rates on the gross receipts of smelters: 1 per cent when between \$25,000 and \$1,000,000; 2 per cent when receipts exceed \$1,000,000. Special taxes were imposed on pawn-, ship-, and custom-house brokers, theatres and places of amusement according to seating capacity, bowling alleys and billiard tables, and tobacco manufacturers according to volume of sales. Various modifications were made in the liquor tax rates, and previous stamp taxes were repealed.

**INCOME TAX COLLECTIONS.** The annual report of the Commissioner of Internal Revenue showed that collections under the Federal Income Tax for the fiscal year 1916 totaled \$124,937,252, a gain of \$44,700,000, or 55 per cent over the preceding year. The tax on corporations yielded \$56,993,658, an increase of \$17,800,000 over the preceding year; that on individuals yielded \$67,943,594, a gain of \$26,800,000.

Returns were received from 336,443 corporations, or 67,000 more than in 1915. This increase, however, was due in part to delayed reports of 1915. Aggregate income of \$5,184,442,000 was returned by 190,911, while 175,532 reported either operating deficit or no taxable income. From each of 15 different districts the corporation tax yielded more than \$1,000,000; that including New York City yielded \$10,093,000; that including Chicago, \$4,591,000; the first Pennsylvania, \$3,203,000; the 23rd Pennsylvania, \$2,980,000; and the 3rd Massachusetts, \$2,858,000.

Individual income taxes were paid by 336,652 persons. Of these 266,153 were married, 47,583 were single men, and 22,916 were single women. The collections of the normal tax, that is on incomes under \$20,000, amounted to \$23,995,000, an increase of \$7,436,000 over 1915. Incomes from \$20,000 to \$50,000 paid \$6,091,000; those from \$50,000 to \$75,000 paid \$4,071,000; those from \$75,000 to \$100,000 paid \$3,623,000; those from \$100,000 to \$250,000 paid \$10,936,000; those from \$250,000 to \$500,000 paid \$6,393,000; and those above \$500,000 paid \$12,647,000. This last group showed an increase of \$6,208,000, the largest increase for any class of incomes. Only 120 persons paid taxes on net incomes exceeding \$1,000,000, and 74 of these resided in New York State; 209 paid on incomes from \$500,000 to \$1,000,000; 592 paid on sums from \$250,000 to \$500,000; 2906 paid on incomes from between \$100,000 and \$250,000; 2056 on incomes between \$75,000 and \$100,000;

4791 on incomes between \$50,000 and \$75,000; 4100 on incomes between \$40,000 and \$50,000; 7005 on incomes between \$30,000 and \$40,000; 6196 on incomes between \$25,000 and \$30,000; 9707 on incomes from \$20,000 to \$25,000; 16,475 on incomes between \$15,000 and \$20,000; 34,102 on incomes between \$10,000 and \$15,000; 120,402 on incomes between \$5000 and \$10,000; 58,949 on incomes from \$4000 to \$5000; and 69,045 on incomes below \$4000.

Students of the income tax returns pointed out that residents in and about New York City paid about one-half of the total tax, and that 70 per cent of the tax was paid by residents of the following States: New York, \$30,252,000; Pennsylvania, \$6,313,000; Illinois, \$5,166,000; Massachusetts, \$4,193,000; New Jersey, \$2,928,000; and Ohio, \$2,416,000. This result was in part due to the supertax, these States including the vast majority of persons having the higher incomes.

The commissioner recommended that certain changes be made in the law. He thought returns of annual gross income of \$3000 or over should be required instead of returns of annual net incomes of such amounts. He recommended that the filing of returns in the district in which the person has his legal residence be required. He contended that the provision requiring the deduction of the normal income tax at the source should be repealed except in the case of non-resident alien and corporations receiving income from the United States; and that instead the law require a statement of the source of income in the returns. He thought this would permit a closer control over the assessment of income.

**CONSTITUTIONALITY.** On January 24th the United States Supreme Court in the case of *Brushaber v. Union Pacific R. R. Co.*, rendered a long-awaited opinion regarding the constitutionality of the income tax section of the *Tariff Act of 1913*. The question at issue involved primarily the constitutionality of the 16th Amendment to the United States Constitution, which authorizes the imposition and collection of an income tax. The objections that had been raised were as follows: In the first place it was argued that the actual law was not in harmony with the 16th Amendment which authorized the levying without apportionment of a direct tax of special character; secondly that since the amendment authorized the taxation of incomes "from whatever source derived" the exclusion of incomes of certain persons and classes would be unconstitutional, unless the tax were apportioned; in the third place the statute is in some of its provisions retroactive, but the incomes of the retroactive period could be taxed only under the preëxisting constitutional provisions regarding apportionment. The Court held that these contentions would cause one constitutional provision to conflict with another, that is, would result in conflict between the general requirement that all direct taxes be apportioned and the specific provision of the amendment exempting an income tax, which is a direct tax, from apportionment. Moreover, this amendment which authorizes a direct tax removes such tax from the rule of uniformity which the Constitution applies to other direct taxes, thus making it possible even to impose different rates in different States. The Court held that the specific object of the 16th Amend-

ment was not to confer power to levy income taxes in general, nor to distinguish between one kind of income taxes and another, but to exempt all income taxes from the requirement of apportionment and from consideration as to source of income. The Court also held that this amendment does not change the established interpretation of the term "direct tax," except in so far as may be necessary to secure the results aimed at. With reference to the progressive feature of the law the Court pointed out that extensive objections had been made to this provision as transcending established rules of taxation and constituting an arbitrary abuse of power, but that these objections overlooked the fact that progressive taxes had been imposed at various times in American history and hence "in this situation it is, of course, superfluous to say that arguments as to the expediency of levying such taxes or of the economic mistake or wrong involved in their imposition are beyond judicial cognizance."

On February 21st the Supreme Court handed down decisions in a number of cases involving (1) the constitutionality of the surtax, that is, the excess tax on higher incomes, and (2) the question whether income derived from or accompanied by the physical deterioration of property is taxable to the same extent and in the same manner as income resulting only from current operations. The Court found that objections to the statute had been made on the ground that the surtax was not authorized by the 16th Amendment and hence exceeded the power conferred upon Congress; and that this surtax is unconstitutional partly because its provisions are retroactive in operation and partly because it creates illegal discriminations and inequalities. These contentions were set aside by the Court's opinions, which, taken as a whole, constituted a wide justification of the surtax provisions under all probable circumstances.

One of these cases, *Stanton v. Baltic Mining Company*, was based on the contention that the income of mining companies consisted in part of capital depreciation, and that consequently the statute was in effect discriminatory in its application to such companies. The Court overruled the objections and with reference to the income of mining companies held that it is unreasonable to consider that the gradual exhaustion of the ore body which must result from working a mine causes the tax in a case where inadequate allowance is made for the exhaustion of the ore body to become a tax on property and therefore subject to apportionment. The opinion held that there is no ground for the view that a tax on the product of a mine is necessarily a direct tax on property, but that such view is "wholly fallacious."

**MASSACHUSETTS.** The Legislature of Massachusetts enacted an income tax law applicable to incomes of the calendar year 1916 and thereafter. Returns must be made on or before March 1st by each person, partnership, association, or trust whose annual income exceeds \$2000. Return, however, need not be made of income from real estate, certain exempted dividends, interest on bonds of the United States, or of Massachusetts or any of its political divisions, or wages received from the United States. The act provides a 6 per cent tax on the incomes from such forms of intangible property as had previously been taxable, and a tax

of 1½ per cent on incomes derived from trades, professions, and annuities, together with a tax of 3 per cent on profits derived from dealings in intangible personal property. The 6 per cent tax is assessed on incomes from bonds, notes, money at interest, and debts due, but income from the following sources is exempt: savings deposits, bonds of local, Massachusetts, and Federal governments, and mortgages on Massachusetts real estate. Other income subject to the 6 per cent tax includes dividends of companies organized in other States (except national banks, and railway, telephone, and telegraph companies doing business in the State), and dividends of partnerships, associations, and trusts with certain exemptions. From the 6 per cent tax are exempted interest paid on debts of various kinds, and \$300 when the total income of the taxpayer from all sources is less than \$600. From the 1½ per cent tax are exempted expenses actually connected with trade or profession (not including family expenses nor premiums for use and occupancy insurance or rent insurance); a reasonable allowance for depreciation of property used; taxes; interest on trade or business indebtedness; business losses; 5 per cent of the assessed value of tangible property used in the business; debts arising since Dec. 31, 1915, and paid during the year; income taxed under the 6 per cent sections of the law; and the following: \$500 for a husband or wife, \$250 for each child under 18 years, and \$250 for each parent who is entirely dependent, but these last items may not exceed \$1000. Thus men with families have a total of \$3000 of income exempted besides exemptions due to interest, debts, and other items above mentioned. Some effort is made to secure information as to the source of incomes by requiring all employers in the State to file names of employees receiving over \$1800 a year; requiring a similar return from city, town, and county treasurers, and the State auditor; and requiring corporations and trusts to file names of all shareholders.

**TRADING STAMP DECISIONS.** In April the Supreme Court rendered decisions in various cases growing out of the use of trading stamps in advertising and selling goods. A statute of the State of Washington imposing a very high license tax upon all commerce using trading stamps was attacked as unconstitutional, because not equal and uniform in operation, because it deprived complainants of their liberty and property without due process of law, and for other reasons. The Court held that the State's police power could be extended to include complete prohibition of the use of trading stamps; and that the power of taxation, being equivalent to the power to destroy, readily comprises the license taxes in question. With reference to the economic justification of the trading stamp the Court held that since companies using it found it profitable "there must, therefore, be something more in it than the giving of discounts"; "it may well be thought there is something in it which is masked from the common eye and that the purchaser at retail is made to believe that he can get more out of the fund than he has put into it."

**TAYLOR, JAMES MONROE.** An American educator, died in New York City, Dec. 19, 1916. He was born in Brooklyn, N. Y., in 1848 and graduated from the University of Rochester in 1868 and from the Rochester Theological Semi-

nary in 1871. After his ordination to the Baptist ministry, he occupied pastorates at South Norwalk, Conn., and Providence, R. I., until 1886, when he was called to the chair of ethics in and the presidency of Vassar College. In this latter office, which he held until his retirement as president emeritus in February, 1914, Dr. Taylor became known as one of the leading educators of the country. During his administration the number of buildings increased from 5 to 30, the students from 312 to 1000, the college property from 200 acres to 700, and the faculty from 35 members to 112. As an important part of his work for the welfare of the college, he interested in it John D. Rockefeller, Mrs. Russell Sage, and other wealthy and influential persons. He was succeeded as president by Dr. Henry Noble MacCracken. Dr. Taylor served as a member of the committee of 10 named by ex-President (then President) Eliot of Harvard to investigate the relations between secondary schools and colleges, with a view to a better correlation. Honorary degrees were conferred on him by Rochester, Yale, Rutgers, and Smith, and a new art building at Vassar was named for him. He published *Elements of Psychology* (1892); *Before Vassar Opened* (1914); and, with Elizabeth H. Haight, *Vassar* (1915).

**TEACHERS COLLEGE.** A non-sectarian co-educational institution in New York City, one of the schools of Columbia University. It was founded in 1888. In the various departments in the fall of 1916 there were 2141 students enrolled. The faculty (not including officers of the Horace Mann and Speyer Schools of the college) numbered 188. Productive funds amounting to \$2,399,847 yielded in 1916 an income of \$122,339. There were 6500 volumes in the library. President of Columbia University, Nicholas Murray Butler; dean of Teachers College, James Earl Russell.

**TEACHING, CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF.** See UNIVERSITIES AND COLLEGES, section so entitled.

**TELEPHONY.** There was no striking development in the art of telephony during 1916. Trans-continental communication had already been made commercially successful, as mentioned in the 1915 YEAR BOOK. The year 1916, however, was one showing a steady growth in the use of the telephone, the amount of business done, and the extension of existing lines. Mr. Burleson, the Postmaster-General, in his annual report called attention as he had done in the previous year to the, in his opinion, necessity of government ownership and operation of all telegraph and telephone lines. The general opinion as expressed in newspaper and magazine comment was opposed to this view. Public service commissions of various States were disposed to take a more liberal attitude towards the existing telephone lines where the question of competition by independent companies was involved; thus in several cases where application was made for an extension in competition with the existing company, permission was refused on the ground that the extension asked for would not result in any greater convenience to the public. It was generally found that the existence of two separate companies in the same territory had this result: lower efficiency and less public benefit. On the other hand, the enterprise and virility of the independent com-

panies was noticeably increasing in that particular portion of the United States where they had become most firmly established. Intense rivalry and in many cases bitter feeling between the independent telephone companies and those constituting the Bell system were but slightly diminished, yet there was an increasing amount of interchange of business at connecting points. The United States Independent Telephone Association, formed in 1915, held its first annual convention at Chicago in December and reported encouraging progress on the year's work. There was an increasing number of inter-connection between the lines of this association and those of the Bell system (American Telephone and Telegraph Company).

It was reported that there were 20,500 telephone exchanges in the United States, of which 6000 were in the Bell group, and the remainder, those of the independent companies. The Independent Association referred to controlled directly 600 subsidiary corporations and indirectly about 6000 small companies. There were 1200 exchanges competing directly with those of the Bell company. Some slight progress was made in the construction and development of so-called automatic exchanges during the year. These had been improved over the types formerly built, and appeared to give general satisfaction. The opinion of prominent telephone engineers tended to the view that many more automatic features must be incorporated as fast as practicable in the regular manually operated exchanges owing to the increasing cost of labor, but any changes in this direction must be adopted with the greatest care and discrimination.

An interesting achievement of the year was the connection established at the Massachusetts Institute of Technology, Boston, on the occasion of an important meeting, with 35 different cities at the same time. The connections and resulting conversation were highly satisfactory and were of distinct importance when it is realized that the most distant of these 35 cities, namely, New Orleans and Seattle, were 4850 miles apart, and that the simultaneous connection involved the use of 74,532 miles of line. The value of this experiment with reference to times of national danger or emergency, can hardly be overestimated. As in many localities trouble had been experienced with the so-called inductive disturbances where telephone lines were near electric power lines, increasing efforts were made to avoid this sort of trouble, not only by separating the two circuits more widely, but by certain devices which were adopted that would minimize the induction due to the power circuit. The most troublesome instances of this kind were usually found near electric inter-urban or electrified steam railroads. At a few colleges and technical institutions special courses in the theory and practice of telephone engineering were established. The experiment had not proceeded far enough to give any conclusive results as to the practical benefits to the students, however.

**TELESCOPES.** See ASTRONOMY.

**TEMPERANCE.** See LIQUOR REGULATION; LIQUORS; and various States of the United States, under the section *Politics and Government*.

**TENNESSEE. POPULATION.** The estimated population of the State on Dec. 31, 1916, was

2,296,316. The population in 1910 was 2,184,789.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16, were as follows:

	<i>Acreage</i>	<i>Prod. Bu.</i>	<i>Value</i>
Corn ..... 1916	3,250,000	84,500,000	\$79,430,000
..... 1915	3,450,000	98,150,000	54,027,000
Wheat ..... 1916	865,000	7,958,000	13,449,000
..... 1915	860,000	9,030,000	9,752,000
Oats ..... 1916	860,000	7,560,000	4,687,000
..... 1915	857,000	8,746,000	4,373,000
Potatoes ... 1916	36,000	2,952,000	4,898,000
..... 1915	36,000	3,168,000	1,996,000
Hay ..... 1916	1,050,000	1,449,000	21,785,000
..... 1915	950,000	a 1,396,000	19,404,000
Tobacco ... 1916	102,200	b 81,760	8,258,000
..... 1915	92,900	b 69,675	4,890,000
Cotton ... 1916	878,000	378,000	35,285,000
..... 1915	772,000	c 303,000	16,407,000
Rye ..... 1916	15,000	150,000	202,000
..... 1915	18,000	189,000	195,000
Barley ... 1916	10,000	237,000	237,000
..... 1915	8,000	192,000	144,000

a Tons. b Pounds. c Bales.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned, in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments .	4,609	4,775
Average number of wage earners .....	73,840	74,373
Capital invested .....	\$167,924,000	\$211,423,000
Wages .....	28,251,000	33,083,000
The value of materials used	104,016,000	123,430,000
The value of products ....	180,217,000	212,071,000

**MINERAL PRODUCTION.** The estimated production of coal in 1916 was 6,560,000 tons, an increase compared with 1915 of 830,000 tons or 14 per cent. The most important influence causing this increase was the demand for coke and coal by the iron industry. Railroad consumption of coal was greater than in 1915, and all the industries in the State and in near by States, which depend on this coal, were in full operation, and using a maximum quantity of fuel. During the first half of the year the car supply was ample, and operators were able to furnish all the coal required. During this period there was a surplus of labor. In the last half of the year, however, there was a shortage of cars and of labor.

The production of the iron ore in 1915 was 284,185 gross tons, compared with 330,214 tons in 1914. The ore shipped from the mines in the State in 1915 was valued at \$408,204, compared with a value in 1914 of \$330,214.

**TRANSPORTATION.** The steam railway mileage of the State in 1916 was 4217. There was no new construction of railways in the State during the year.

**EDUCATION.** The latest statistics for education are for 1914. In that year the total school population was 776,895. There were enrolled in the public schools 593,437, with an average daily attendance of 431,053. The total number of teachers, male and female, numbered 12,578. The expenditures for schools amounted to \$6,064,653.

**FINANCE.** The latest statistics available for

the finances of the State are for the biennial period 1912-14. There was a balance on Dec. 20, 1912, of \$785,120. The receipts for the biennial period amounted to \$9,166,870, and the disbursements to \$9,779,579, leaving a balance on Dec. 20, 1914, of \$172,410. The interest bearing debt of the State amounted on Jan. 1, 1915, to \$11,781,000.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include three hospitals for the insane, the Tennessee Deaf and Dumb Schools, Tennessee School for the Blind, Confederate Soldiers' Home, Tennessee Industrial School, Tennessee Reformatory for Boys, the Blind Girls' School, and State Penitentiary. The total amount paid to charitable institutions and for pensions from 1883 to 1914 amounted to \$31,224,163.

**POLITICS AND GOVERNMENT.** The Legislature did not meet in 1916. There was little local excitement over the campaign. Governor and other State officers were elected on November 7th. The Democratic candidate, Thomas C. Rye, received 146,759 votes, compared with 118,749 cast for Overall, his Republican opponent. For United States Senator McKellar, Democrat, was elected with 143,718 votes, compared with 118,138 votes cast for Hooper, his Republican opponent. For President, Wilson received 152,955 votes, as against 116,257 cast for Hughes. All Democratic State officers were elected.

**OTHER EVENTS.** A new Harahan bridge, across the Mississippi River at Memphis, said to be the largest structure on the river, was opened for traffic in September. Including the approaches it is three miles long, and costs approximately \$5,000,000. Construction on it was begun in 1913. On March 22nd, a fire in Nashville destroyed 600 buildings, chiefly in the residential section, and caused a loss of \$1,500,000. Among other buildings four churches were burned. The experiment of working negro convicts on the roads of the State has been so successful that the State Board of Control in January decided that the plan was a great improvement upon the old contract system. Of 55 State prisoners, all negroes, who worked on the roads of Williamstown County, during the summer of 1915, only three attempted to escape. The health and conduct of the prisoners were much better than under the old system. Contracts for such labor in other counties were made in 1916.

**STATE OFFICERS.** Governor, Thomas C. Rye; Secretary of State, R. R. Sneed; Treasurer, Porter Dunlap; Auditor, Hayes Flowers; Commissioner of Agriculture, H. K. Bryson; Superintendent of Education, S. W. Sherrill; Comptroller, John B. Thomason; Adjutant-General, Charles B. Rogan; Attorney-General, Frank M. Thompson; Commissioner of Insurance, William F. Dunbar—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, M. M. Neil; Justices, S. C. Williams, D. Lansden, Arthur S. Buchanan, and Grafton Green; Clerk, Preston Vaughn.

STATE LEGISLATURE:

	<i>Senate</i>	<i>House</i>	<i>Joint Ballot</i>
Democrats .....	27	72	99

**TENNESSEE, UNIVERSITY OF.** A non-sectarian co-educational institution at Knoxville, Tenn., founded in 1794. Not including the medical, dental, and pharmacy departments there were 740 students in the fall of 1916. The faculty numbered 200. Among appointments the most important were: David R. Lee as professor of Greek; Frank F. Frantz as professor of French; John A. Thackston as professor of education; and Frank M. Darnall as acting professor of English. There are 40,000 volumes in the library. President, Brown Ayres.

**TENNIS.** The European war again prevented the holding of international tennis matches in 1916. The playing of Richard Norris Williams, 2d, of Philadelphia was the feature of the year in the United States. Williams regained the championship in the singles, which he had held in 1914, through his defeat of William M. Johnston, the 1915 title holder, in the final round of the national tourney at Forest Hills, Long Island.

The victory of Williams was sensational in that when he and Johnston retired at the end of the third set the Californian led by two sets to one, having overwhelmed Williams in the third set by a 6-0 score. The Philadelphia player by a wonderful display of stamina and aggressiveness turned the tables in the fourth set to the tune of 6 to 2 and in the final set triumphed by a score of 6 to 4.

Johnston and Clarence J. Griffin, also a Californian, retained the national doubles title by their victory over the challenging team comprising Maurice E. McLoughlin and Ward Dawson, both of California.

The tour of the United States by Itchiya Kumagae of Japan aroused considerable interest among followers of the sport. Kumagae won several notable victories, numbering among his victims the brilliant Johnston, whom he defeated in a tournament held at Newport, R. I.

Miss Molla Bjurstedt of Norway, the 1915 women's champion, had no difficulty in disposing of her opponents. She not only retained the national title but carried off the honors on the indoor and clay courts, stamping herself the greatest player of her sex in the history of the game.

A summary of the principal tournaments held in the United States follows:

All-Comers' National at Forest Hills, L. I. Men's Singles, final round, R. Norris Williams, 2d, defeated William M. Johnston 4-6, 6-4, 0-6, 6-2, 6-4; men's doubles, challenge round, W. M. Johnston and C. J. Griffin defeated M. E. McLoughlin and Ward Dawson 6-4, 5-7, 6-3.

Women's National at Philadelphia, Pa. Singles, final round, Miss Molla Bjurstedt defeated Mrs. Edward Raymond 6-0, 6-1; doubles, final round, Miss Molla Bjurstedt and Miss Eleanora Sears defeated Miss Edna Wildey and Mrs. Edward Raymond 4-6, 6-2, 10-8; mixed doubles, final round, Miss Eleanora Sears and W. E. Davis defeated Miss Florence Ballin and W. T. Tilden, 6-4, 7-5.

Clay Court at Cleveland, Ohio. Men's singles, final round, W. E. Davis defeated C. B. Doyle 6-2, 7-5, 6-3; challenge round, W. E. Davis defeated R. Norris Williams, 2d, by default; doubles, final round, George M. Church and Dean Mathey defeated W. E. Davis and H. V. D. Johns 7-5, 6-0, 6-2. Women's singles, final round, Miss Molla Bjurstedt defeated Miss

Martha Guthrie 8-6, 6-3; mixed doubles, final round, Miss Molla Bjurstedt and George M. Church defeated Mrs. H. W. Bickle and C. B. Doyle 6-1, 6-2.

National Indoor at New York City. Singles, final round, Robert L. Murray defeated Alrick H. Man, Jr., 6-2, 6-2, 9-7; doubles, final round, Dr. William Rosenbaum and Arthur Lovibond defeated King Smith and A. S. Cragin 3-6, 1-6, 6-4, 8-6, 10-8.

Women's National Indoor at New York City. Singles, final round, Miss Molla Bjurstedt defeated Mrs. Frederick Schmitz 6-2, 6-1; doubles, final round, Miss Molla Bjurstedt and Miss Marie Wagner defeated Mrs. S. F. Weaver and Mrs. Frederick Schmitz 6-1, 6-3.

Intercollegiate at Haverford, Pa. Singles, final round, G. C. Caner, Harvard, defeated J. S. Pfaffman, Harvard, 6-3, 6-1, 5-7, 6-2; doubles, final round, G. C. Caner and Richard Harte, Harvard, defeated J. S. Pfaffman and W. P. Whitehouse, Harvard, 6-3, 6-1, 6-2.

Junior and Boys' at Forest Hills, L. I. Junior, final round, Harold Throckmorton defeated Roland Roberts 7-5, 6-4, 6-4; boys', final round, Benjamin Letson defeated D. W. Johnson 6-0, 6-0, 6-1.

Metropolitan at Bronxville. Men's singles, final round, George M. Church defeated Dean Mathey 6-3, 6-4, 9-7; doubles, final round, George M. Church and Dean Mathey defeated H. H. Hackett and W. M. Hall 6-1, 6-3; women's singles at Forest Hills, final round, Miss Molla Bjurstedt defeated Miss Martha Guthrie 6-2, 6-0; doubles, final round, Mrs. Rawson Wood and Mrs. S. F. Weaver defeated Miss Molla Bjurstedt and Miss Marie Wagner 6-1, 4-6, 6-4.

Pacific Coast at Del Monte, Cal. Men's singles, final round, W. M. Johnston defeated C. J. Griffin, 9-7, 7-5, 6-8, 8-6; doubles, final round, W. M. Johnston and C. J. Griffin defeated J. C. Rohlf and B. Detrick, 6-2, 6-2, 8-6. Women's singles, final round, Miss Baker defeated Miss Thorn 8-6, 6-4; doubles, final round, Miss Baker and Miss Myers defeated Miss Casel and Mrs. Cushing 6-4, 6-3.

Newport Invitation at Newport, R. I. Singles, final round, Itchiya Kumagae defeated W. M. Johnston 6-1, 9-7, 5-7, 2-6, 9-7; doubles, final round, J. J. Armstrong and W. F. Johnson defeated C. J. Griffin and W. M. Johnston 4-6, 6-2, 6-1, 3-6, 9-7.

**TERAUCHI, SEIKI, COUNT.** A Japanese statesman, appointed premier Oct. 4, 1916, to succeed Marquis Okuma. The increasing strength of the bureaucratic party forced Okuma's resignation, and the choice of Count Terauchi was regarded as a blow to the advocates of a representative government. Okuma, after his own fall, had endeavored to help Baron Kato to form a ministry by a coalition of several groups which left only the Conservative army party in opposition. Terauchi, although he was said to favor a no-party system of government, was claimed by the Conservatives. He succeeded in forming a cabinet, which was announced on October 9th. Count Terauchi (pronounced terra-oochi, 'inside the temple'), was born in 1853 and had become a sub-lieutenant in the army by the time of the Saigo rebellion in 1877. During the Chino-Japanese War he rendered valuable service in the ministry of war, and during the Russo-Japanese War, he headed

this ministry. He has been credited with formulating the army expansion policy carried out by Japan in recent years, and with the coup that accomplished the annexation of Korea. When resident-general in Korea, he gained a reputation for his vigorous policing of the country. It was expected that as head of the ministry he would insist on a more vigorous foreign policy, dictated by expansionist views.

**TERRESTRIAL MAGNETISM.** See PHYSICS.

**TETANUS.** The 14th annual summary of Fourth of July injuries, made by the *Journal* of the American Medical Association, of the statistics of deaths and injuries resulting from the celebration of the Fourth of July, indicates that the "safe and sane" propaganda is steadily spreading. For the first time not a single case of tetanus was reported, whereas in 1903, the first year the statistics were compiled, 417 cases occurred. Thirty fatalities were directly due to fireworks, 10 being burned to death, 9 dying from gunshot wounds, 4 from explosions of toy cannons, 3 from explosions of powder, 3 from blood poisoning, and 1 was killed by a mammoth firecracker. The total number of non-fatal injuries was 820; of these 10 lost one eye each, 9 lost legs, arms, or hands, and 24 lost one or more fingers. Firearms were responsible for 118 injuries; giant crackers, 222 injuries; cannons, 84 injuries. As usual, many of these casualties were due to stray bullets from the reckless shooting of firearms. In 1916 New York City had the greatest number of accidents, namely, 7 killed and 79 injured; and Philadelphia, 1 killed and 73 injured. The *Journal* points out that, as a result of its campaign, the number of deaths has been reduced from 215 to 30; the deaths from lockjaw from 125 to 0; and the total of deaths and injuries from 5460 to 850. See also SEROTHERAPY.

**TEXAS. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 4,472,494. The population in 1910 was 3,896,542.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16, were as follows:

	Acreage	Prod. Bu.	Value
Corn . . . . . 1916	6,900,000	131,100,000	\$136,344,000
1915	7,100,000	166,850,000	96,778,000
Wheat . . . . . 1916	1,200,000	13,200,000	22,836,000
1915	1,650,000	25,575,000	27,365,000
Oats . . . . . 1916	1,500,000	42,750,000	26,078,000
1915	1,500,000	53,250,000	22,365,000
Rice . . . . . 1916	235,000	10,575,000	9,094,000
1915	260,000	7,980,000	7,058,000
Potatoes . . 1916	40,000	2,000,000	3,800,000
1915	42,000	2,780,000	2,866,000
Hay . . . . . 1916	480,000	576,000	6,048,000
1915	450,000	a 765,000	6,044,000
Tobacco . . . 1916	200	140,000	28,000
1915	200	b 100,000	27,000
Cotton . . . . 1916	11,517,000	8,775,000	850,796,000
1915	10,510,000	c 3,227,000	171,697,000
Rye . . . . . 1916	2,000	20,000	24,000
1915	2,000	34,000	35,000
Barley . . . . 1916	9,000	153,000	122,000
1915	9,000	252,000	171,000

a Tons. b Pounds. c Bales.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments . . . . .	4,538	5,084
Average number of wage earners . . . . .	70,280	74,853
Capital invested . . . . .	\$216,876,000	\$283,544,000
Wages . . . . .	37,907,000	44,821,000
The value of materials used . . . . .	178,178,000	253,144,000
The value of products . . . . .	272,896,000	361,279,000

**MINERAL PRODUCTION.** The coal production of the State in 1916 is estimated at 1,800,000 tons, or 289,000 tons less than in 1915. The decrease was mainly in the bituminous districts. A strike that closed many of the mines during September was the chief cause of the decrease, as the demand for coal by railroads and industries was good, and the supply of cars and labor was abundant during the year.

The production of petroleum in Texas in 1915 surpassed all previous records, and placed the State third in rank among the oil-producing States. The total production was 24,942,701 barrels, compared with 20,068,184 barrels in 1914.

The output of the metals mined in 1916 amounted to \$600,000 in gold, 680,000 ounces of silver, 600,000 pounds of lead, and 100,000 pounds of copper, compared with \$1503 in gold, 675,473 ounces of silver, 219,299 pounds of lead, and 421,209 pounds of copper in 1915.

The output of metal mined in 1915 had a total value of \$365,480, compared with \$313,787 in 1914. Silver is the principal metal produced.

**TRANSPORTATION.** The railroad mileage of the State on June 30, 1916, was 15,655 miles of main track and branches, with 4208 miles of yard tracks and sidings.

**EDUCATION.** The latest available statistics are for 1914. In that year the school population was 1,433,476. The enrollment was about 870,000. Measures passed by the Legislature of 1915 went into effect in 1916. These included a compulsory attendance law. The Legislature also established a county board of education, and appropriated money for the purpose of establishing a department of vocational training in high schools. Three assistant superintendents were provided for.

**FINANCE.** The latest statistics available for the finances are for 1914. There was a balance on Aug. 31, 1913, of \$333,615. The receipts amounted to \$14,274,728, and the disbursements to \$12,886,734, leaving a balance on Aug. 31, 1914, of \$1,721,609.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the State Penitentiary at Huntsville, State Penitentiary at Rusk, Insane Hospitals at Austin, Terrel, and San Antonio, State Orphans' Home at Corsicana, State Epileptic Colony at Abilene, Deaf and Dumb Institute at Austin, Confederate Soldiers' Home, Confederate Women's Home, and the Deaf, Dumb, and Blind Institute for Colored Youths at Austin, State Juvenile Training School at Gatesville, State Tuberculosis Sanatorium at Carlsbad, and the Girls' Training School at Gainesville.

**POLITICS AND GOVERNMENT.** The most important political campaign during the year in Texas was the contest for United States Senator, which was won in the run-off primary by United States Senator Charles A. Culberson, his opponent being former Gov. O. B. Colquitt. This was the first year that Texas had non-

inated candidates for United States Senator under the direct primary system. In the first primary, held July 22nd, there were five prominent candidates for the Democratic nomination for United States Senator, namely, the incumbent, Mr. Culberson, former Gov. O. B. Colquitt, Dr. Samuel Palmer Brooks, president Baylor University, and Congressman Robert L. Henry, chairman of the rules committee, House of Representatives. In the first primary Mr. Colquitt received a plurality of the votes, his nearest opponent being Senator Culberson. Under the law these two aspirants ran off the race a month later. In the contest Senator Culberson was nominated by an overwhelming majority. The issue in the Culberson-Colquitt campaign was a straight-out endorsement of the Wilson administration. Mr. Colquitt was the leading opponent of the President in Texas within the Democratic party and rallied to his standard most of the so-called German-American voters and other Democrats who were displeased with the Wilson administration. Just before retiring from office Governor Colquitt in 1914 gave out an interview to the newspapers in which he denounced the Wilson administration as a complete failure. This interview and his subsequent course, together with his obtaining a plurality in the first primary, caused the issue to be very definitely drawn between himself and Senator Culberson, who was known throughout the nation to be one of President Wilson's staunchest supporters. An effort was made within the Democratic party by the prohibition element to defeat Gov. James E. Ferguson for reelection, his opponent being Charles H. Morris. The campaign resulted in the renomination and subsequent election, of course, of Governor Ferguson by a large majority. The Democratic party by a small vote declared for the submission of a constitutional amendment prohibiting the liquor traffic. The Democratic convention, however, did not embrace this demand in the platform drawn at Houston and the contest was to be renewed before the Legislature in January. President Wilson received 285,909 votes and Hughes 69,949.

**OTHER EVENTS.** The 80th anniversary of the signing of the Texas Declaration of Independence was celebrated on March 2nd at the city of Washington. This city, which is now almost deserted, was twice the capital of the Republic of Texas. Fifty acres of land have been purchased in the neighborhood for a State park. Near the centre of this tract stands a grand shaft commemorating the signing of the declaration and the establishment of the Republic of Texas. On March 21st a fire in the city of Paris destroyed more than 30 blocks of buildings in the residential portion of the city. Out of 140 business structures only 15 were left standing. Almost the entire business section of the city was destroyed, and with it the main part of the residence section. Only one life was lost, but property lost was valued at \$5,000,000. Additional improvements to the Houston Ship Canal, which was completed in 1914, were begun in 1916. There has been planned a channel 250 feet wide with a minimum depth of 35 feet, to develop the channel above a turning basin and nearer the city, at a cost of \$10,000,000. The construction includes wharves and cotton sheds. The turning basin will be widened to a diameter of 1100 feet. These im-

Y. B. 16-28.

provements are to be owned and operated by the city. It is expected that Houston will share in trade developed by the opening of the Panama Canal. On March 6th a fire in the city jail of El Paso caused the death of 18 Mexican prisoners who were confined there. The fire was believed to have been caused by the throwing of a lighted match into a disinfecting mixture which exploded. During the fire a Mexican outside the jail spread a rumor that 200 Mexicans had been thrown into jail and deliberately burned to death. He boarded a street car, and shot and killed Charles Phelps, a motorman.

**STATE OFFICERS.** Governor, James E. Ferguson; Lieutenant-Governor, W. P. Hobby; Secretary of State, John G. McKay; Adjutant-General, Henry Hutchings; Attorney-General, Benjamin F. Looney; State Treasurer, J. M. Edwards; Comptroller, H. B. Terrell; Superintendent of Public Instruction, W. F. Doughty; Land Commissioner, J. T. Robison; Commissioner of Agriculture, Fred W. Davis; Commissioner of Insurance, John S. Patterson—all Democrats.

**JUDICIARY.** Supreme Court: Chief Justice, Nelson Phillips; Associate Justices, James E. Yantis and W. E. Hawkins; Clerk, F. T. Connerly.

**STATE LEGISLATURE:**

	<i>Senate</i>	<i>House</i>	<i>Joint Ballot</i>
Democrats .....	81	142	178
Republicans .....	..	1	1
Democratic majority ..	81	141	172

**TEXAS, UNIVERSITY OF.** A co-educational State institution at Austin, Texas. The medical department of the university is at Galveston. In the fall of 1916 there were 2465 students, exclusive of medical students, who numbered 333. There were 261 faculty members. The new president of the university, Dr. Robert Ernest Vinson, formerly president of the Austin Presbyterian Theological Seminary, took office on July 1st, and was inaugurated November 30th. The university owns land, the estimated value of which is \$2,060,000 and in 1916 drew an income of \$180,000. In the library were 122,906 volumes.

**TEXAS FEVER.** See **VETERINARY MEDICINE.**

**TEXTILE MANUFACTURING.** In practically all branches of this great American industry, the year 1916 was one of activity and prosperity, marked by increased production and high prices, with greater exports due to the European war. In most fields there were greatly increased costs of raw materials, machinery, and labor, while there was a general scarcity of shipping and also high freight rates. As regards colors the situation improved very much, but shades were regulated in the main with due consideration of the American dyes available. In some industries there were labor difficulties, as among the manufacturers of such articles as cloaks and suits, that had their effect, but in the main the various industries passed through an active and trying year in a manner satisfactory to most interests concerned.

The activity in cotton manufacturing was shown by the fact that the consumption of cotton in the United States broke all records in the 12 months ended July 31st. The consump-

tion was placed at 6,397,613 bales, as compared with 5,597,362 bales in 1914-15, showing a gain of 14 per cent over the previous high record. In addition to this, there were 880,916 bales of linters used, or more than double the quantity used in the previous year. The large gain in mill consumption was due to the increase in the development of American mills, especially in the South; but the great increase in linters consumption was due to the demand for a short-staple fibre in the manufacture of explosives. The accompanying table shows the number of active spindles, annual mill consumption, and the quantity of linters used in the American Union in the five years ended July, 1916, inclusive:—

Year	Spindles	Mill Consumption	Linters Used
1912	30,578,528	5,129,846	288,287
1913	31,519,766	5,488,821	808,089
1914	32,107,572	5,577,408	807,325
1915	31,964,335	5,597,862	411,845
1916	32,805,883	6,397,613	880,916

The whole number of spindles in the United States was 33,333,176, or only 527,293 spindles in excess of the number of spindles active in 1915-16. The number of spindles in the principal cotton-manufacturing States was as follows: Massachusetts, 10,896,774; South Carolina, 4,735,193; North Carolina, 3,988,098; Rhode Island, 2,552,765; Georgia, 2,259,855; New Hampshire, 1,455,282; Connecticut, 1,343,573; Alabama, 1,111,860; and Maine, 1,090,006. No other State reached 1,000,000 spindles.

There was a heavy demand in the United States for cotton goods for South America and much of the business once enjoyed by Europe was deflected to American manufacturers. Statistics of shipments of cotton goods to South America for the 10 months ending October, 1916, as summarized in the *Textile World Journal*, indicate the wonderful increase in business that had taken place. During this period, Brazil took 2,343,303 yards, compared with 414,972 yards in 1915, and 374,329 yards in 1914; Chile, 17,316,240 yards, as against 6,709,311 yards in 1915, and 8,155,994 yards in 1914; Colombia, 35,510,072 yards, compared with 17,567,640 yards in the same period the previous year, and 9,461,643 yards in 1914; "other South America," 36,431,033 yards, compared with 18,758,420 yards in 1915, and 12,139,575 yards in 1914. Argentina took, in this period, 24,778,853 yards valued at \$2,602,418.

But American manufacturers did not have it all their own way, for Great Britain, notwithstanding the war, was making every effort to retain her immense export trade in cottons. British exports of cotton cloth to South and Central America in the 11 months ending with November, 1916, amounted to 475,000,000 yards, against 275,000,000 yards in the same months in 1915, 276,000,000 in the corresponding months of 1914, and 549,000,000 in the same months of 1913. To Argentina alone the exports of cotton piece goods for the 10 months ending with October, 1916, were 172,000,000 yards, against 95,000,000 yards for the same months of 1915, 81,000,000 yards in 1914, and 174,000,000 in 1913, the high record year of Argentine imports. Exports of cotton cloths from the United States to Argentina in the 10 months ending with October, 1916, were but 25,000,000 yards, as against British exports to Argentina of 172,

000,000 yards in the same period. To South and Central America, as a whole, American exports of cotton cloths in the 11 months ending with November were about 180,000,000 yards, against British exports of 475,000,000 yards to the same territory in the same period, the 11 months ending with November, 1916.

The statistics of exports from the United States during the 10 months ending with October, 1916, afforded a reliable, if incomplete, index of the progress made during the year by the cotton industry. "Unbleached cloths" declined in this period from 180,557,032 yards in 1915 to 124,066,132 yards in 1916, although the latter figures showed a gain over the 10 months' exports in 1914, which amounted to only 109,856,507 yards. The steady increase in bleached goods trade was shown by the total of 71,097,787 yards for the first 10 months of 1916, as compared with 58,729,130 yards in 1915. The most notable gain of all was a total of 123,778,601 yards of printed cloths shipped in the first 10 months of 1916, compared with 75,243,877 yards in 1915, and of 144,263,248 yards for the 10-month period in 1916 of "all other colored cloths," largely composed of yarn dyed goods (coverts, cottonades, and suitings going to South America), as against 82,581,798 yards in 1915. The gain in "dyed in the piece" cloths amounted to less than 2,000,000 yards. Knit goods and yarn shipments during the 10-month period in 1916 were given only in value, and were, therefore, rather misleading. The figure for the 10 months of 1916 was \$19,413,939, compared with \$13,533,007 in 1915. Cotton yarns, valued at \$4,892,752, were shipped up to and including October in 1916, as against \$2,825,288 in 1915.

During the year wool manufactures showed great strength and in some cases there were cancellations by the agents of the mills rather than by buyers, as in previous years. The dye situation improved materially and the war contracts did not figure as much as in 1915, for British manufacturers were showing themselves competent to take care of the clothing, not only of their own vast armies, but to a large measure of those of their allies.

TEXTILE MILL CONSTRUCTION IN 1916. The total number of new textile mills in the United States for the year 1916 was placed at 280, by the *Textile World Journal* in its annual review, which affords the authority for the accompanying paragraphs. This figure can be compared with 219 for 1915, and an annual average of 255 for the eight preceding years. The highest record for this period was 289 new mills established in 1909, and the low mark 208 new mills in 1911. The cotton and silk industries in 1916 showed a large increase over 1915, silk in particular making the largest gain, while the wool and knitting establishments made smaller relative increases, and miscellaneous mills showed a loss. The accompanying table gives a comparison of new mills constructed during 10 years.

A marked tendency toward expansion in the cotton industry was noted, for 51 new mills were established by newly organized concerns or as separate departments of old-established mills. Not only was this more than double the number in 1915, but above the average for the eight preceding years. The principal reason for cotton mill expansion was the continuously in-

COMPARISON OF NEW MILL CONSTRUCTION FOR THE TEN YEARS 1907-16

	1916	1915	1914	1913	1912	1911	1910	1909	1908	1907

creasing demand for tire fabric yarns and cloths. More new mills, particularly in the East, were organized to make this class of product than any other grade of cotton goods. In fact it was stated that new machinery started during 1916 or ready in the following year to be put in operation on tire fabric products would have a larger output than the entire production of tire fabric materials a few years previous.

As usual, North Carolina leads the South in number of new cotton mills, and in 1916 also exceeded South Carolina in total number of new spindles. Tennessee and Georgia made a large gain over increases in recent years.

In addition to new construction an equally important fact was that many New England mills had also reorganized and extended various departments. Such reorganizations and extensions of departments of old-established mills indicated in many ways the growth of the cotton industry quite as much as did the new mills organized, for many of these extensions were of imposing magnitude and of more importance than new mills.

Twenty-three woolen and worsted mills were established during the year, but nearly all the new enterprises were of small or medium size, and were scattered throughout the various manufacturing sections already occupied by these industries. Massachusetts led in number, followed by Pennsylvania, Connecticut, and Rhode Island. The extensions made by old-established mills represented a larger addition to the manufacturing facilities of these industries than the new projects, and especially notable in 1916 were the enlargements made by the carpet and rug mills. It was an interesting circumstance of the year that the woolen and worsted mills more than any other division of the industry seemed to view the existing commercial situation and the possible return of peace in a conservative spirit and were disposed to make only such additions and replacements as were absolutely necessary.

In the knitting industry a total of 113 new enterprises were started, and this number it was stated, would have been greater were it not for a needle shortage which prevented many projects from maturing. The largest number of new plants were in Pennsylvania, while North Carolina was in second place. The South was showing greater interest each year in the knitting industry, and besides those in North Carolina, knitting mills were established in Alabama, Georgia, South Carolina, Tennessee, Texas, and Virginia. Many of these new hosiery and underwear mills in the South were large enterprises representing investments of \$50,000 to \$200,000. As regards product, hosiery mills predominated in the new mills of the year, and there were approximately as many new hosiery mills as new underwear mills and other knit goods mills combined.

Silk mills also increased during the year with

the important developments in that industry which are discussed under SILK (q.v.).

Among the miscellaneous new mills of the year were three artificial silk mill projects, one of which expected to begin the production of fibre silk early in 1917. One of the other new artificial silk mills was a complete new plant at Roanoke, Va., as a branch of the American Viscose Co., of Marcus Hook, Pa., the only plant previously producing artificial silk in the United States.

The other miscellaneous new mills in the textile industry were fibre, cordage, asbestos, and dyeing, bleaching, and finishing plants. Bleacheries and dye works naturally predominated. Fewer raw stock bleaching and cotton nitrating plants were established than during 1915, the supply of nitrated cotton having caught up with the demand.

**THEATRES.** See ARCHITECTURE; DRAMA.

**THEBES.** See ARCHÆOLOGY.

**THEBES, MADAME DE.** A French astrologist and clairvoyant, died at her country residence at Meung-sur-Loire, Dec. 24, 1916. Her real name was Anna Victorine Savigny, but it was by the one she had assumed that she was always known. She was born in 1844 and early became a celebrity in Paris. It was said that Alexandre Dumas placed her on the highroad to fortune by inviting her to read the palms of a company of dinner guests and afterward publishing an enthusiastic account of her powers. From then on, she was sought out by persons in all walks and stations of life and many thousands came to regard her prophecies as if they were inspired. The yearly *Almanach* published by her proclaimed her successes. Her many failures to predict correctly did not seem to disconcert her or her followers, and they were able to point to an extraordinary number of cases where, it was claimed, she had foretold events correctly, such as: the downfall of the Second Empire in France; the Boer War, the Russo-Japanese War, the second Balkan War; the assassination of King Alexander and Queen Draga of Serbia, of President Carnot, and of King Humbert of Italy; the discovery of radium; the capture of Khartum; the deaths of General Boulanger, President Faure, Queen Victoria, Pope Pius X, and Zola; the Messina and San Francisco earthquakes; the Paris floods of 1910; the defeat of President Taft for reelection; and the recent Irish revolt. Several months before the *Titanic* sank, she had warned Col. John Jacob Astor not to travel on the sea during the next year. But Mme. de Thebes gained her greatest celebrity after the fulfillment of her prophecies that in 1914 "France will be drawn into war and will emerge victorious," that the Germans would closely approach Paris, but would be unable to take the city, and that "President Wilson will have a wretchedly delicate rôle; after being very sympathetic, they will fall on him from all sides." The seeress, how-

ever, failed to predict correctly the end of the great war, first announcing that peace would be declared in 1915 and later in 1916. Two of her best known publications were *The Enigma of the Hand* and *The Enigma of the Dream*.

**THEOSOPHICAL SOCIETY, THE.** In 1916 the American section of the Theosophical Society had 4714 members and 154 churches. The total membership of the society was about 30,000. Altogether, since the Theosophical Society was founded in 1875, more than 1400 branches have been established. The national president of the American section is A. P. Warrington and the headquarters are at Krotona, Hollywood, Los Angeles, Cal. The general headquarters of the society were removed in 1879 from New York City to Adyar, Madras, India, and there the president, Mrs. Annie Besant, resides. There are branches of the society in all parts of the world.

**THOMSON, ELIHU.** A distinguished American scientist, inventor of electric welding and holder of more than 500 patents, who in December, 1916, was awarded both the Royal medal of the Royal Society, London, and the John Fritz medal (United States).

**THOMPSON, SILVANUS PHILLIPS.** A British electrical engineer and physicist, died in London June 13, 1916. He was born in York in 1851, graduated from London University in 1869, and later took degrees at the Royal School of Mines. From 1878 to 1885 he held the chair of experimental physics at University College, Bristol, and thereafter was principal and professor of physics in the City and Guilds Technical College, Finsbury, London. He also discharged the duties of professor of applied physics in London University. Professor Thompson became especially well known for his contributions to dynamo-electric machinery and the electro-magnet. At various times he was president of the Physical Society, the Institution of Electrical Engineers, the Optical Society, the Illuminating Engineering Society, and the Optical Conference. He was elected a fellow of the Royal Society, and received honorary degrees of M.D. and LL.D. In 1893 he visited the United States. He published, besides the two important treatises, *Dynamo-Electric Machinery* and *Elementary Lessons in Electricity and Magnetism*, and other technical works, *Michael Faraday* (1898), and *Life of Lord Kelvin* (1910).

**THORNDIKE, ASHLEY H.** See **LITERATURE, ENGLISH AND AMERICAN, Essays, etc., American.**

**THROMBOPLASTIN-HESS.** See **KEPHALIN.**

**THURSTON, JOHN MELLEN.** An American lawyer, Republican leader, and legislator, died at Omaha, Neb., Aug. 9, 1916. Although born (1847) in the East, at Montpelier, Vt., he went West early, studying for a time at Wayland University, Beaver Dam, Wis., and gaining admission to the bar in 1869. Thereafter he was identified with the life of Omaha, where he settled to practice. By 1874 he had become city attorney and by 1875 a member of the State

Legislature. Two years later he was appointed to the legal staff of the Union Pacific Railroad, of which in 1888 he became general counsel. For many years Mr. Thurston was prominent in Republican national politics, as temporary chairman of the national convention of 1884, as permanent chairman of the conventions of 1888 and 1896, and as United States Senator from 1895 to 1901.

**THYROIDITIS, PARASITIC.** See **TROPICAL DISEASES.**

**TIBET.** A Chinese dependency in central Asia; the home of Buddhism. The estimated area is 756,000 square miles, including Koko-Nor and Tsaidam. There are widely varying estimates of population; perhaps 2,000,000 is as plausible as any. The capital is Lhasa, with an estimated population of 15,000 to 20,000, including a large number of Buddhist monks. Tibet imports from India cotton and woolen goods and grain, in exchange for borax, salt, and musk; wool and ponies are important exports. Gold is said to exist in workable quantities.

**TICKS.** See **ROCKY MOUNTAIN SPOTTED FEVER; VETERINARY MEDICINE.**

**TIMBER.** See **FORESTRY.**

**TIME, STANDARD.** See **DAYLIGHT SAVING.**

**TIMOR.** The largest island of the Lesser Sunda group, divided between Portugal and the Netherlands. The estimated area is 12,593 square miles, of which 7330 belong to Portugal; population, 400,000, of whom 200,000 are Portuguese subjects.

**TIN.** The production of tin throughout the world showed a decline in 1916, and both the Federated Malay states and the Straits Settlements, which are the leading sources of this metal, manifested a striking decrease in their exports from 1915. There was an increase in the costs of production, and an increase in prices which reached a maximum monthly average of 51.23 cents in New York in April. The average price for the year was 43.48 cents, as compared with 38.59 in 1915 and 34.30 in 1914. There was a tendency for stocks to increase and for consumption to decline. The difficulties and high rates of freight and legislation and hostile interference with shipping all acted to develop uncertainty in the tin markets. In the United States the tin industry naturally was hampered by the prevailing scarcity of steel, although it was fairly active during the year. There were not, however, any great enlargements of the capacities of existing plants. The United States Geological Survey reported the production of tin in the United States in 1915 as 204,000 pounds, valued at \$78,846, as compared with 208,000 pounds, valued at \$66,560 in 1914.

It is worthy of note that the tin market in 1916 was completely under the control of the British government and when early in March exports were checked the price increased at once. The disturbance of regular traffic of course also affected the industry. See **CHEMISTRY, INDUSTRIAL; METALLURGY.**

**TIBOL.** A crownland of Austria. The area is 10,302 square miles; population in 1910, 946,613.

**TIRPITZ, ALFRED VON.** See **GERMANY, History, Peace Discussion.**

**TIRYNS.** See **ARCHEOLOGY.**

**TISZA, COUNT STEPHAN.** See **AUSTRIA-HUNGARY, History.**

**TOBACCO.** The tobacco crop of the United States in 1916 was the largest ever produced—1,150,622,000 pounds, and was grown on the largest acreage ever employed for this crop—1,411,800 acres. The yield per acre was not exceptionally large and was not quite equal to the five-year average, but the quality was good and the farm price relatively high, giving the crop a value at the farm of \$169,008,000. The year was a prosperous one for the tobacco industry in the United States, as indicated by the manufacturer of products. The report of the Commissioner of Internal Revenue for the fiscal year showed the production of large cigars to be 7,390,183,170, an increase of more than 330,000,000 over the preceding year. There was a decrease amounting to nearly 25,000,000 in the number of little cigars, but an increase of more than 4,000,000,000 in the cigarette output, which reached 21,066,196,672. Manufactured tobacco (chewing and smoking) reached an aggregate of 417,235,928 pounds, an increase of nearly 15,000,000 pounds; and the output of snuff was 33,170,680 pounds, an increase of three and one-third million pounds.

The cigar, cigarette, and manufactured tobacco interests paid revenue taxes aggregating \$88,063,947, which represented an increase of more than \$8,000,000 over the previous year. The tax on cigarettes alone was over \$26,000,000. Imports of foreign wrapper leaf in the fiscal year amounted to slightly over 5,000,000 pounds, nearly all from the Netherlands, and hence classed as Sumatra. Of filler leaf there were imported 42,943,027 pounds. The export of tobacco was considerably interfered with by the war and by the restrictions placed on importation of tobacco products by several of the countries at war.

With a view to improvement in the methods of production and the quality of tobacco in the Philippines and to raise its standing in the markets of the United States, the Legislature passed a law providing for an official inspection of all tobacco designed for export. The law related also to the use of improved seed, curing in sheds of approved design, efforts to find means for combating diseases and pests affecting tobacco, and inspection and certification of the products in the islands and in the United States.

**TOBACCO POISONING.** See **SNUFF POISONING.**

**TOBAGO.** See **TRINIDAD AND TOBAGO.**

**TOGO.** A German protectorate on the Guinea Coast of Africa between Dahomey (French) and the Gold Coast (British). Estimated area, 87,200 square kilometers (33,668 square miles). Estimated native population, 1,032,000. The number of whites, Jan. 1, 1913, was 368, of whom Germans 320. The forests contain oil-palms, rubber trees, and dyewoods. To some extent the natives cultivate corn, yams, manioc, bananas, and ginger. In 1912 and 1913 imports were valued at 11,428,000 and 10,631,000 marks; exports, 9,959,000 and 9,138,000. Imports from Germany in 1912 amounted to 4,820,000 marks; exports to Germany, 5,808,000. Exports of merchandise in 1913 included: palm kernels, 2,558,000 marks; raw cotton, 532,000; palm oil, 518,000; rubber, 360,000; cattle, 334,000; cacao, 333,000; corn, 288,000; ivory, 56,000. Railway in operation at the end of 1913, 327 kilometers (203 miles). The budget for 1914-15 was continued for 1915-16, balancing at 4,177,943 marks, the

estimated receipts being almost wholly local. Lome is the capital and chief port.

The conquest of Togo was effected by the Anglo-French forces Aug. 25, 1914. The country is in part administered by the government of the Gold Coast and in part by that of Dahomey. See **GERMAN PROTECTORATES.**

**TOLSTOI, COUNT LEO.** See **RUSSIAN LITERATURE.**

**TONGA, or THE FRIENDLY ISLANDS.** A group of islands in the south Pacific, constituting a British protectorate. Area, 390 square miles. As estimated in 1910 the population was 21,695, including about 600 whites; at the end of 1912, natives numbered 22,527. Nukualofa, on Tongatabu, is the capital.

**TONGKING.** A state (the northernmost) of the colony of French Indo-China (q.v.), lying between China and Annam. The trade is included with that of French Indo-China. Hanof is the capital, as well as the capital of French Indo-China.

**TORPEDO BOAT DESTROYERS.** See **BATTLESHIPS AND OTHER WAR VESSELS; NAVAL PROGRESS.**

**TORPEDOES.** See **SUBMARINES.**

**TOSTI, SIR FRANCESCO PAOLO.** An Italian composer and song writer, who long lived in England, died in Rome Dec. 3, 1916. He was born in 1847 at Ortona in the Abruzzi. He studied violin and composition at the Naples Conservatory, where he was appointed a pupil-teacher. After many hardships, he gained his first success with two songs which he himself put out in Rome when publishers had rejected them. Then, through the interest of Sgambati, he became music master to Princess Margherita of Savoy, later Queen of Italy, and keeper of the Musical Archives of the Italian Court. Believing that he would find a highly appreciative public in England, he visited that country in 1875. Publishers refused his song "For Ever and Ever," but the public acclaimed it, and other songs, such as "That Day," "Aprile," "Good-bye," "The Venetian Song," and "Beauty's Eyes." Some of these have been translated into as many as 11 languages. Tosti was appointed music master to the English royal family in 1880. King Edward created him C. V. O. in 1906 and K.C.V.O. in 1908.

**TOTEN AUGEN, DIE.** See **MUSIC, Germany.**

**TOWN PLANNING.** See **CITY PLANNING.**

**TOWNSEND, CHARLES ELROY.** Re-elected Republican United States Senator from Michigan Nov. 7, 1916.

**TOWNSEND, JOHN G.** Elected Republican Governor of Delaware Nov. 7, 1916.

**TOZER, HENRY FANSHAW.** An English philologist and geographer, died June 2, 1916. He was born at Plymouth in 1829 and was educated at Winchester and at University and Exeter colleges, Oxford. He became fellow of Exeter, tutor, and classical moderator, and was curator of the Taylor Institute from 1869 to 1893. He took orders, but devoted himself largely to extensive travels in Greece and Turkey and to scholarly pursuits. Besides editing various works on Greece, he published: *The Highlands of Turkey; Lectures on the Geography of Greece; The Church and the Eastern Empire; History of Ancient Geography*, and similar works; also, an English commentary and prose translation of Dante's *Divina Commedia*.

**TRACK AND FIELD ATHLETICS.** See ATHLETICS, TRACK AND FIELD.

**TRADE UNIONS.** The year was relatively uneventful in trade union history. In the United States the most important events were connected with STRIKES AND LOCKOUTS (q.v.), ARBITRATION AND CONCILIATION (q.v.), and the AMERICAN FEDERATION OF LABOR (q.v.). Consult also cross references under LABOR. The INDUSTRIAL WORKERS OF THE WORLD (q.v.) were conspicuous at times, but their propaganda gained little headway. In England, as in America, the excessive unrest of 1915 due to the disruption of trade relations by war-time conditions had been temporarily allayed by new working agreements. Nevertheless there were both at home and abroad evidences that employers were far from ready to cease their struggle against union demands. The National Conference Board formed in America thus constituted a new challenge to labor. While abroad the industrial war was temporarily overshadowed by the great international struggle, nevertheless there were repeated evidences of the intention of unions, especially in Great Britain, not only to prevent the wiping out of their gains by war conditions but even to increase them. The Allied Labor Conference, while indicating a degree of international trade union sentiment, did not apparently produce an acceptable programme of international action.

**NATIONAL CONFERENCE BOARD.** A very important development in the relations of trade unions to business was the formation of the National Industrial Conference Board in November, comprising over 15,000 employers with a combined capital of \$8,000,000,000 and a total labor force of 7,000,000 wage earners, or nearly three-fourths of all industrial workers in the country. This board will serve as a clearing house of information and seek to enlist the support of the public and the government by publicity and education. The manager, M. W. Alexander, said that henceforth "there will be nothing concealed or suppressed, and there will be no presentation of arguments except in the full light of day or for the benefit of the whole people." The manager's statement declared that the co-operation of labor was necessary and would be cultivated by every possible means. The organization hoped "to develop among the employees a reasonable attitude towards manufacture and other industry, to inspire a sense of fair play, efficiency, and loyalty." The press took the attitude that this Board was "a union formed by employers against labor"; and quoted a statement of William H. Burr, its president, to the effect that "labor organizers are truculent and aggressive. Organized labor is never satisfied, and it is eternally bent on wrecking that structure of industry which has been erected through the patience, persistence, and patriotism of business men." In response to this organization on November 19th at a meeting in Washington there was formed a defensive alliance of the American Federation of Labor with the railway brotherhoods. This was expected to lead to a more complete consolidation of trade union forces throughout the country.

**THE STRIKE AND ANTI-TRUST LEGISLATION.** An important legal suit was that of Dowd vs. United Mine Workers, in which damages of \$1,250,000 were sought under the Sherman Anti-

Trust Law on account of an alleged conspiracy to restrain interstate commerce by a strike. Mr. Dowd was receiver of a coal mine in western Arkansas which in 1914 became involved in a contest with the mine workers. One of the mines was almost completely destroyed. In the suit the demurrer of the workers was upheld in the Federal district court; but its decision was reversed by the circuit court of appeals about November 1st. The opinion held that interference with interstate commerce constituted a proper cause for action. The case was then appealed to the Federal Supreme Court. This case was similar to that of Loewe vs. the Danbury Hatters, although no boycott was here involved. The important aspect of this case was that it involved the utilization of the strike as a means of conspiring to restrain interstate commerce. It consequently involved the most vital weapon of organized labor. The case antedated the Clayton Act, but the decision of the highest court was expected to throw some light on the bearing of this act upon trade union activities.

**ALLIED LABOR CONFERENCE.** This was a conference arranged by the French Confederation of Labor. It was held at Leeds, England, July 5th in private sessions under the presidency of James O'Grady, a Labor member of the British Parliament. In a statement issued to the press it was said that the conference had taken steps to neutralize the International Trade-Union Office, by removing it from Berlin to Geneva. A proposal of the American Federation of Labor (q.v.) for a world's trade union congress at the same time as the peace conference at the close of the war was voted down, ostensibly for the reason that this might tend to make organized labor an object of ridicule on account of its pretentiousness. The proposal, however, had received the support of the French delegates. A resolution presented by these same delegates declaring freedom of the seas to be one of the necessary accomplishments of the war was withdrawn after the British members had violently opposed it on the ground that they could not support any proposal which might tend to jeopardize England's food supply.

**GREAT BRITAIN.** Many grave problems of intimate importance for the success of the nation in war and for the protection of labor confronted organized labor in England during 1916. There had been much complaint regarding the apparently indifferent attitude of British labor toward the immense problems of production necessitated by the war. (See under LABOR.) The unionists had openly protested against efforts to undermine their trade prestige in various lines, and had frequently resorted to strikes early in the war to enforce the improvement of labor conditions which the pressure and confusion of war-time activity had seriously demoralized. Nevertheless, the Trades-Union Congress with 650 delegates in its annual session at Bristol in September pledged its members to assist the government as far as possible in winning the war. In commending this, Mr. Lloyd George, then Munitions Minister, said to the congress: "The government can lose the war without you; they cannot win it without you. The war has resolved itself into a conflict between the mechanics of Germany and Austria on the one hand and the mechanics of Great Britain and France on the other." In view of

this declaration of the unions, and the findings of "The Health of Munitions Workers Committee" showing the deplorable conditions in most munitions plants and the general nervous tension, it would seem that few of the labor disturbances were due to anything like an unpatriotic attitude on the part of the unions. It should be recalled in this connection that trade-union regulations had been suspended for the period of the war and that in the industries contributory to the war the right to strike no longer existed.

The official report of the registrar of friendly societies in that part dealing with trade unions showed that on Dec. 31, 1914, there were 690 unions in Great Britain. Of these 643 made returns indicating 3,261,050 members and \$34,128,000 funds. The average contributions per member per week was 13.2 cents. The following benefits were paid during the year: unemployment, \$4,331,000, including \$827,000 for unemployment insurance in the insured trades; disputes, \$3,260,000; sickness and accident, \$3,309,000; funeral, \$778,640; miscellaneous, \$2,627,000.

**HOLLAND.** From reports of foreign labor departments reviewed in the *Monthly Review* of the United States Bureau of Labor Statistics (September, 1916), it appears that the number of trade unions in Holland Jan. 1, 1915, was 3373 with 227,391 members. This was an increase of 150 in number of unions and of 7114 in membership during the preceding year. Unions organized on a religious basis had increased 10.5 per cent in membership and others less than 1 per cent. Two-thirds of the unions and members were affiliated with one of five national federations. There were outside of the unions 634 workingmen's associations with 75,721 members. Of the trade union members, 15,982 were in Protestant unions, 41,809 in Catholic unions, and the remainder (169,600) in non-sectarian unions.

**NEW SOUTH WALES.** The same source shows that New South Wales unions in 1914 numbered 205 with 237,714 members. The largest memberships were in the following groups: building, 22,685; engineering and metal working, 19,243; food, drink, and narcotics, 18,244; mining and smelting, 26,857; pastoral, 22,941; railroads and street railways, 47,018; navigation and shipping, 19,933. The aggregate assets of the unions were \$892,998. The membership of friendly societies was 182,325 with \$8,686,000 assets. State subsidies to these societies amounted to \$113,500; while the following benefits were paid by them: sick pay, \$840,912; funeral donations, \$216,296; medical attendance and medicines, \$887,202; or a total of \$1,944,410.

**AUSTRALIA.** The number of trade unions in the Commonwealth increased from 302 with 147,000 members in 1906 to 713 with 528,000 members in 1915. Railway and tram workers comprised the largest single union.

**CANADA.** The report of the Canadian Department of Labor for the calendar year 1915 showed that the war was demoralizing trade union organizations. In 1914 there was a decline of 9636 in union membership and of 14 in number of local unions. In 1915 there was a further decrease of 120 local unions and 22,800 members; the total membership at the close of 1915 was 143,343. The causes of this decline were

the enlistments (about 12,500), the employment of other thousands in British munitions plants, and the depression in certain industries. Of Canadian unionists 114,722 were affiliated with international organizations, a decrease of 25,760 in one year. Trade union benefits were paid to the amount of \$14,525,000, or \$1,727,000 less than in 1914. Death benefits aggregated \$7,628,000 and strike benefits, \$3,208,000.

**TRAMMELL, PARK.** Elected Democratic United States Senator from Florida, Nov. 7, 1916.

**TRANSMISSION OF ELECTRIC POWER.** See ELECTRIC POWER, TRANSMISSION OF.

**TRANSVAAL.** One of the four original provinces of the Union of South Africa (q.v.). Pretoria, the capital of the Union, is also the seat of the provincial government.

**TRANSYLVANIA.** Part of eastern Hungary, formerly a grand principality. It is bounded on the east by the Bukowina and Rumania and on the south by Rumania. It is sometimes not regarded as a part of Hungary proper, as so much of its population is non-Magyar, especially Rumanian. The area is 22,318 square miles. The census of Dec. 31, 1910, returned a population of 2,678,367, as compared with 2,476,998 in 1900 and 2,267,935 in 1890, the increase per cent being 9.2 between 1890 and 1900 and 8.1 between 1900 and 1910. In the latter year Rumanian was the mother tongue of 1,472,021 (55.0 per cent) of the inhabitants; Hungarian, 918,217 (34.3 per cent); German, 234,085 (8.7 per cent). Adherents of the Orthodox, or Eastern, Church constituted 29.6 per cent of the population in 1910; Greek Catholics, 28.0 per cent; Reformed, 14.9 per cent; Roman Catholics, 14.0 per cent; Evangelicals of the Augsburg Confession, 8.6 per cent; Unitarians, 2.5 per cent; Jews, 2.4 per cent. Of the inhabitants over six years of age in 1910, 50.5 per cent could read and write, as compared with 41.5 in 1900. The principal towns include Kolozsvár (Klausenburg), regarded, after Budapest, as the most important intellectual centre in Hungary, with 60,808 inhabitants in 1910; Brassó (Kronstadt), 41,056; Nagyszében (Hermannstadt), 33,489; Maros-Vásárhely, 25,517.

**TREPOFF, ALEXANDER.** A Russian statesman, succeeded M. Boris Stürmer as Premier in November, 1916. The change of ministry was hailed as a blow at reactionary and German influences.

**TREVENA, JOHN.** See LITERATURE, ENGLISH AND AMERICAN, Fiction, English.

**TRICHINOSIS.** The diagnosis of this disease, often very difficult, has been rendered easier by the discovery of W. Lintz, of the Long Island College Hospital, that the parasite *Trichina spiralis* may be obtained in the cerebrospinal fluid by means of lumbar puncture, not only with a fair degree of constancy, but sometimes before the parasite can be demonstrated in the muscles. Lintz adds three recent cases to those already reported, all in Italians, who

ate infected pork, 21 days prior to lumbar puncture, and all of whom subsequently developed into typical cases of trichinosis, showing all the symptoms of the disease, including the phenomenon of eosinophilia. The spinal fluids were otherwise normal in appearance and chemical reaction, but when centrifuged showed one to four trichinæ in each microscopic field. The embryos were motile and retained their activity for three days when kept in cerebrospinal fluid at the room temperature. W. T. Cummins and G. R. Carson of San Francisco also reported one case, that of a Greek laborer, with the trichina embryos in the spinal fluid.

It is well known that the treatment of this disease is very unsatisfactory. It was thought that salvarsan and neo-salvarsan might prove specific, and they were tried without, however, giving very promising results. In this connection McNerthey reports one cure by means of the intravenous injection of neo-salvarsan, an advanced case in the 15th week of the disease, presenting emaciation, anemia, and extreme prostration, with every sign pointing to a fatal termination. The author, ignorant of the unfavorable reports by Cott and others, injected neo-salvarsan, with the result that within 48 hours there was a remission of symptoms, followed by entire recovery in a few weeks.

**TRIESTE.** A crownland of Austria, forming part of the administrative district of Küstentland and consisting principally of the important seaport of Trieste. The area of the crownland is 37 square miles; the population in 1910 was 229,510.

**TRINIDAD AND TOBAGO.** A British colony composed of two islands—Trinidad, 1754 square miles; and Tobago, 114 square miles. Total population (1911), 333,552, of whom 86,373 were East Indians. East Indian immigration is conducted under the control of the government. The capital is Port of Spain (59,658 inhabitants).

**TRINITY COLLEGE.** A non-sectarian institution for the education of men at Hartford, Conn. It was founded in 1823 by members of the Protestant Episcopal Church as Washington College. The name was changed in 1845. In the fall of 1916 there were 246 students enrolled and the faculty numbered 24. The productive funds of the institution amounted to \$1,300,000 and the income to \$60,000. The library contains 80,000 volumes and 40,000 pamphlets. The president of the college is Flavel Sweeten Luther.

**TRIPOLI.** See LIBYA.

**TROPICAL DISEASES.** A disease peculiar to the gold coast in Africa and known as "bungpagga" has been found by Patton to be apparently due to a vegetable micro-organism, belonging to the order of saccharomyces or yeast fungi. Patton is of the opinion that the yeast cells are absorbed in the intestine and are derived from grain which has become infected in the bin. The definite incubation period appears to be three days, during which there is malaria, headache, a sense of fatigue, anorexia, intense thirst, and constipation. The onset is sudden and rigors may usher in the attack. The temperature rises rapidly to 103° F. or more. There is extreme tenderness in the muscles, within which painful tumors make their appearance in 12 hours; the abscesses

seem always to occur near their bony attachments. There may be only one nodule, or many. In some cases the distribution is bilaterally symmetrical. The tumors are deep seated; they are hard, nonfluctuating, very tender, with their long axes either in or parallel to the long axes of the muscles affected. Each tumor is about the size of a hen's egg. They are at first hard and firm and are easily visible and palpable; later on, if the patient survives they become slightly soft, but never flabby. Usually, in mild cases, the abscesses point after some weeks, and burst if unopened. As a rule, the fewer the nodules the better the prognosis. If the patient survives the acute stage he stands a good chance of recovery. The deaths usually occur within the first week, the third and sixth days seeming to be the most critical. Even during convalescence (for two months or more) the patient exhibits an occasional febrile reaction.

**CHAGAS'S BRAZILIAN TRYPANOSOMIASIS.** Novas has studied Chagas's "parasitic thyroiditis," as the latter designated it at first, and gives the results of much experimental work. The parasite has been named the *Schizotrypanum cruzi*. It induces in adults hypertrophy of the thyroid with myxedema, melanoderma and muscular weakness; in children the course is more acute, with fever, swelling of glands and hypertrophy of the thyroid, entailing symptoms of thyroid insufficiency and sometimes of meningeal irritation. In the chronic form there may also be a syndrome with heart or nervous symptoms predominating. Vaccines made from the parasite have not proved effectual. The parasites locate by preference in the skeletal striated muscle, but may invade glandular, adipose, and connective tissue, heart, spleen, etc. Most of the cells of the organism seem to bear invasion by the parasites without much harm, but suffer from their toxins. These seem to affect the thyroid predominantly, but the genital glands and suprarenals are liable to suffer as well as the nervous system from the presence of the parasites in the brain. Their penetration into the heart is responsible for most of the deaths from Chagas's disease. The intermediate host is a bug, called "barber" by the natives, as it bites mostly about the face.

A new School of Tropical Medicine has been founded in Calcutta. The school, which has received an endowment for ten professors, is already built, but will probably not be opened until after the war is ended.

**TROTting.** See RACING.

**TROWARD, THOMAS.** A British philosopher, died in Lower Shiplake, Oxford, May 18, 1916. He was born in 1847 at Belgaum, India. Following an education at Victoria College, Jersey, and further preparation, he entered the Indian Civil Service. After some 30 years, he retired from office, as divisional judge, and went to Britain, where he lectured in London, Edinburgh, and other cities on philosophical subjects connected with Mental Science and New Thought. In these fields he became known as one of the leading thinkers. His ideas, which have been incorporated in several books, were the outgrowth of a fusion of Western systems of thought with Eastern. While in India he had not only become familiar with Oriental law but with Oriental philosophical and religious

views. He published: *Edinburgh Lectures on Mental Science* (1906); *Bible Mystery and Bible Meaning* (1907); *Doré Lectures* (1909); *The Creative Process in the Individual* (1911).

**TROWBRIDGE, JOHN TOWNSEND.** An American story writer and poet, died at Arlington, Mass., Feb. 12, 1916. He was born at Ogden, Monroe County, N. Y., in 1827. He had only a common school education, supplemented by a winter at a classical academy in Lockport, but as a farmer boy he had begun to write verse, and his first lines published appeared when he was 16. He also taught himself French. For a year (1847) Mr. Trowbridge lived in New York City, where he contributed to the *Dollar* and *Knickerbocker* magazines, but afterward he made his home in Boston. In that city he soon became one of the literary figures of the time, contributing to the *Atlantic* and to *Our Young Folks*, of which he was the editor for several years before it was merged with *St. Nicholas*. Beginning to write stories in 1856, he gained his first big success the next year with *Neighbor Jackwood*, a novel of New England life, which was later dramatized and played with success in several cities. Other well-known novels, among some 35, include: *Coupon Bonds*, *Cudjo's Cave*, and *Farnell's Folly*. Several volumes of his verse appeared, and of this a collected edition has been made. His "Darius Green and His Flying Machine" revived in popularity, when, 40 years after it was written, the aeroplane had become an accomplished fact. Among his stories for boys, those in the "Jack Hazard" series, most of which ran serially in *St. Nicholas* before appearing in book form, at once met great popularity, and other stories of adventure had a wide sale. Mr. Townsend's last book, *A Pair of Madcaps*, was published in 1909. Previous to this he had written *My Own Story, With Recollections of Noted Persons* (1903).

**TRUDEAU, EDWARD LIVINGSTON.** See LITERATURE, ENGLISH AND AMERICAN, *History, etc.*, American.

**TRUDEAU FOUNDATION.** See TUBERCULOSIS.

**TRUMAN, BENJAMIN CUMMINGS.** An American journalist, died at Los Angeles July 18, 1916. He was born at Providence, R. I., in 1835, and was early a teacher, a type-setter, proof-reader, and reporter for papers in New York and Philadelphia. After the outbreak of the Civil War, he was sent to the South as war correspondent, and became staff officer and secretary to Andrew Johnson, then military governor of Tennessee. At intervals he went into the field, serving as staff officer in several battles. He was elected the first major of the first Union white regiment in Middle Tennessee. Several famous "beats" were achieved by him. News of the battle of Franklin was published in the *New York Times*, for which Major Truman was writing, two days before it reached the War Department, wires having been cut; and the same paper had an account of the burning of Atlanta, and of the battles of the Spanish Fort and Blakeley before any other in the country. After Lincoln's assassination, Truman became confidential secretary to President Johnson, and later he was special agent of the Treasury and Post Office departments, and paymaster in the army.

After a year as Washington correspondent of the *New York Times* and the *San Francisco Bulletin*, he settled on the Pacific Coast in 1870. For two years he owned the *San Diego Bulletin*, in 1872 became editor of the *Los Angeles Express*, for four years was proprietor of the *Daily and Weekly Star* in the latter city, and later, for 11 years, served as chief of the literary bureau of the Southern Pacific Railroad. Major Truman also at various times owned papers in Philadelphia, Nashville, and San Francisco, and he wrote books on California, on the Civil War, and on his travels.

**TRUSTS.** There were no far-reaching developments in problems relating to trusts during 1916. The Federal Trade Commission constituted in 1915 entered upon various lines of investigation, but prosecutions were not extensive nor their results of first importance.

**FEDERAL TRADE COMMISSION.** The first extensive work undertaken by this commission was the securing of adequate information regarding American businesses. It discovered that scarcely one manufacturer in 10 had a cost accounting system, but determined his selling prices by guess work or rule-of-thumb methods. The commission therefore urged the general installation of adequate methods of cost accounting, and in this met with widespread support. The commission also stimulated the formation of trade associations as media for improving cost accounting methods, for standardization of prices and products, for elimination of unfair practices, and spreading other information. It also sought to interest American business men in foreign trade and to induce Congress to revise the anti-trust laws so as to permit the formation of cooperative selling agencies, as authorized in the Webb Bill. The commission thus manifested a constructive rather than a critically destructive attitude toward business organization and methods.

Among the inquiries carried on by the commission was one into the newsprint paper situation. This investigation was carried on for eight months during which extensive testimony was secured from publishers and jobbers. It appeared that small publishers had suffered most. The refusal of the paper makers to testify before the commission on the ground that they had not had time to study the commission's figures revealing large profits raised the presumption that a combination in restraint of trade existed between American and Canadian manufacturers. In consequence the Department of Justice determined to make an investigation. While the cost of this paper had increased so rapidly as to force various leading newspapers to increase their prices, reports showed that imports, mainly from Canada, for the first 10 months of 1916, were 786,000,000 pounds, an increase of 193,000,000 pounds over 1915 and of 265,000,000 over 1914. Importations of wood-pulp had, however, remained stationary during this period. On the other hand, the exportation of domestic-made newspaper and wood-pulp showed great increases. For the 10 months paper exports were 129,916,000 pounds, an increase of 7,700,000 pounds over 1915 and of 23,300,000 pounds over 1914; while exportation of wood-pulp of United States origin had much more than trebled.

The annual report of the commission in two volumes of 350 and 500 pages covered many

aspects of internal and foreign trade. The report closed with a strong recommendation that Congress approve the formation of collective foreign agencies by American manufacturers and shippers for the purchase and sale of products in foreign markets. The report also dealt with the prospect of competition after the war, holding that foreign manufacturers "may be expected to utilize their highly efficient organizations for the promotion of trade beyond their borders, even foregoing profits, or taking very low profits, till their costs again become normal and they have reestablished their trade." The report dealt largely with the competitive conditions in most of the countries of the world and included numerous tables and statistical data concerning trade conditions everywhere. Among other things it pointed out that a combination of British steamship lines was using its control of the carrying trade to restrict our commerce with South America. This charge was denied by the companies.

**EXPORT TRADE.** In his annual report for 1915 Secretary of Commerce Redfield had recommended modifications of the anti-trust laws which would permit the cooperation of American producers in selling in foreign markets. It was believed that such combination was essential to prosecution of American trade in competitive markets following the cessation of the war. The proposal was favored by President Wilson in his annual message to Congress in 1916 and had previously been embodied in the Webb Bill. In its annual 1916 report the Federal Trade Commission strongly advocated this provision. It pointed out that the trade policy of various countries permits some sort of cooperation in the cultivation of foreign markets. The commission recommended that the kind of cooperative organizations permitted should be equally defined; that they be restricted solely to export trade; that their scope be restricted to commercial as distinct from manufacturing activities; and that all such organizations be required to file complete statements of their officers, stockholders, and by-laws with the commission.

Throughout the year, and especially toward its close, there were various active movements looking toward the effective organization of American manufacturers and traders for export business. The most important of these was the National Industrial Conference Board. This represented 12 of the most important industrial organizations of the country comprising 15,000 employers with 7,000,000 employees. These were the National Founders' Association, National Metal Trades' Association, National Council for Industrial Defense, National Association of Manufacturers, National Erectors' Association, National Association of Cotton Manufacturers, American Cotton Manufacturers' Association, National Association of Wool Manufacturers, Silk Association of America, United Typotheta and Franklin Clubs of America, American Paper and Pulp Association, and the Rubber Club of America. See **TRADE UNIONS.**

Another important organization was the Argentine Mercantile Corporation formed along lines laid down in the Webb Bill. Its capital was \$5,000,000; its directors included representatives of tool, hardware, paper, machine, engineering, and other manufacturing concerns; and its primary purpose was to carry out co-

operative plans for exporting goods to South America.

**OIL PIPE LINES.** One of the first reports of the Federal Trade Commission dealt with the pipe lines used in the transportation of petroleum. It covered five main lines running from the oil-producing sections of Kansas, Oklahoma, Texas, and Louisiana. The report was made in obedience to a resolution of the Senate; it was limited to the mid-continent field because another Senate resolution called upon the Interstate Commerce Commission for an investigation of pipe lines, and under an agreement of the two commissions this latter investigation was limited to the interstate pipe lines east of the Mississippi River. The report gave data regarding the capital, earnings, cost of transportation of oil by pipe lines, charges, and regulations of the pipe-line companies, the excess of charges over cost of transportation, and other related matters. It was found that the earnings of companies owning pipe lines average nearly 20 per cent. The commission concluded that the prosperity, or even the existence, of some small oil companies is dependent on reasonable and equitable charges and regulations. It pointed out that "lower pipe-line rates and reasonable pipe-line shipping requirements would enable many small producers and refiners to transport crude oil from the mid-continent field by pipe line who are now unable to do so," and would thus equalize competition throughout the country.

**COBN PRODUCTS REFINING COMPANY.** On June 26th Judge Hand of the United States District Court at New York decreed the dissolution of this corporation which, with others including the National Starch Company, the Novelty Candy Company, and the St. Louis Syrup and Preserving Company, had been indicted for unlawful restraint of trade. The decree found that the combination controlled 60 per cent of the trade in its products; that it had created spurious and sporadic competition as a means of eliminating competitors; and that it had thus shown unwillingness to conduct business in a manner demanded by American law. The court announced that the plan for dissolution must be filed within 120 days; and that this plan (for the first time) must be approved by the Federal State Commission. The case was appealed to the Supreme Court.

**VARIOUS SUITS.** One of the trust suits attracting widest publicity was that in which 11 former directors of the New York, New Haven, and Hartford Railroad were charged with criminal conspiracy to monopolize the transportation facilities of New England. A number of these directors were among the most conspicuous financiers of the country. The trial lasted from Oct. 13, 1915, to Jan. 10, 1916, when the jury acquitted six of the defendants and disagreed as to the remainder. Originally six other directors had been indicted and were to be tried separately, but the government requested the dismissal of their indictments on the ground that they had become connected with the railroad after the commission of the acts for which condemnation was sought. Three other directors had been granted immunity. This suit cost the government about \$200,000, and the defendants about \$575,000.

On February 22nd the Federal District Court at Baltimore pronounced a unique judgment

© Harris & Ewing, Washington

Standing, left to right: Will H. Parry and George Rublee. Seated, left to right: Edward N. Hurley, Chairman; Joseph E. Davies, William J. Harris, Vice Chairman

UNITED STATES FEDERAL TRADE COMMISSION, 1916

against the American Can Company. The court refused to order the company's dissolution but retained the indictment filed against it in order to facilitate prosecution in the future if occasion arose. The court declared that the company "had its origin in unlawful acts and thereby acquired a power which may be harmful and the acquisition of which in any event was contrary to the policy of Congress as embodied in the statute," but "it for some time past has used that power on the whole rather for weal than for woe." On April 21st the United States Circuit Court of Appeals at Chicago found that the Quaker Oats Company did not constitute a combination or conspiracy in restraint of trade. In October five members of the Aroostook Potato Shippers' Association were convicted by jury in the United States Court at Boston as maintaining an unlawful restraint of trade. They were charged with blacklisting methods which resulted in secondary boycotting of innocent tradesmen. In January after 10 weeks' trial at Philadelphia the suit of the Bluefields Steamship Company against the United Fruit Company for triple damages amounting to \$15,000,000 was dismissed. This was known as the Banana Trust Suit. About the same time the Supreme Court at Washington dismissed the government suit against 12 prominent transatlantic steamship companies including the Cunard, Canadian Pacific, White Star, and Hamburg-American. This suit was begun on the basis of an agreement by these companies to apportion steerage traffic, and in the lower courts four judges had held certain features of the agreement unlawful. The suit was dropped because the war had completely altered the actual situation. In March was terminated a suit begun three and one-half years previously against the Association of Bill Posters of the United States and Canada, when Judge Landis decided it to constitute an illegal combination. Appeal, however, was taken to the Supreme Court. In Ohio the indictment against Judge Gary of the United States Steel Corporation and various steel companies at Youngstown, Ohio, for violating the State antitrust law by conspiracy to control wages was quashed.

**TRYPANOSOMIASIS.** See TROPICAL DISEASES.

**TUBERCULIN.** Dr. George P. Sanborn, of the Boston City Hospital, gives the results of treatment of tuberculosis of the lymph glands with injections of tuberculin. The preparation was a bacillus emulsion and both human and bovine tuberculin were employed. The initial dosage for children was from 1/50,000 to 1/25,000 of a mg., in adults 1/20,000 to 1/10,000 mg. The results summarized are as follows: In 83 per cent of the cases there was a diminution in the size of the nodes; one or more nodes broke down in 33½ per cent; one or more nodes developed during treatment in 20 per cent; surgical procedures were necessary in 11 per cent; there was a gain in weight in 60 per cent of the cases. There has been a demonstrable improvement in at least 83½ per cent of the patients treated. Recurrence took place in eight cases.

**TUBERCULOSIS.** The search for a test for the existence of tuberculosis in the body which shall be more exact than the various types of tuberculin reactions has been going on for some

years. The chief objection to the tuberculin test is that it fails to differentiate between active and latent infection, so that since the majority of individuals have at one time or another been the subject of tuberculosis, the test after adult life is reached has very little value.

The newer investigations look toward the development of a serum reaction, the so-called complement fixation test, similar to the Wassermann reaction in syphilis. The results so far achieved in this direction have not been entirely satisfactory, the multiplicity of antigens with their varying degrees of sensitiveness being a very disturbing factor. With increasing experience, however, and the employment of a uniform technic, the hope is held out that in the near future a test at least as reliable as the Wassermann reaction may be developed.

Encouraging results were obtained by H. R. Miller, of Columbia University, with an antigen prepared by grinding living or dead tubercle bacilli with dry table salt and then adding distilled water until it is isotonic with the body fluids. The results of 1012 cases tested with this antigen are reported. Special attention is directed to eight incipient cases in which diagnosis by ordinary methods was not practicable, malaria, gastritis, and exophthalmic goiter being suspected. The fixation test was positive in all of them. Of 128 more advanced cases, 90 of which had tubercle bacilli in the sputum, all but four reacted positively to the test. One hundred and fourteen still more advanced cases gave a positive reaction in 109 instances. As showing the value of the test in comparison with the Von Pirquet (tuberculin) test in inactive or arrested cases, 113 of these are reported. Of these, 23 were subjected to the Von Pirquet test, and this was positive in 19 and negative in 4, but the fixation test was negative in all. Miller gives the results in many other types of cases, the particulars of which need not be detailed, but his conclusions are that the reaction with this antigen is practically always positive in active tuberculosis, and negative in non-tuberculous, normal patients, and as a rule in arrested cases.

The August number of the *Journal of Experimental Medicine* was devoted entirely to reports of the Japanese investigators Koga, Otani, and Takano on the subject of chemotherapy in tuberculosis (and leprosy). Various laboratory investigators have attempted to apply chemotherapy to the cure of tuberculosis, since Ehrlich's and Hata's work in syphilis. The treatment of tuberculous animals with a preparation of copper and potassium cyanid showed healing changes in the lesions. Koga's experimental report was supplemented by a clinical report of 63 cases who were, he believed, especially in the first and second stages, greatly improved or apparently cured by the preparation, which he names cyanocuprol. Otani treated 18 cases with generally good results. Takano employed the preparation in six cases of leprosy with apparently beneficial effects. Koga states that the preparation is a double salt of copper and potassium cyanid in 1:2000 dilution. The preparation of the substance appears to be a delicate matter and is not fully revealed.

E. F. McSweeney, who, with Prof. Selakar M. Gunn, was commissioned by the Massachusetts State Board of Labor and Industry and the Industrial Accident Board to investigate the in-

dustrial bearings of tuberculosis, in a preliminary report ("Industry and Tuberculosis," *Journal of Outdoor Life*, April, 1916), says that labor and occupation undoubtedly constitute an important factor in the causation of tuberculosis, but that no particular kind of work can be said to cause the disease. In the records of all the hospitals and sanatoriums examined, women of the home—housewives and domestics—led the list of occupational classes affected by tuberculosis, constituting from 22 to 28 per cent of the total. Clerks, including salespeople, bookkeepers, and stenographers, came next on the list in all sets of records. These two classes—houseworkers and clerks—show the influence of indoor confinement in the production of tuberculosis. Day laborers—workers on streets, roads, railroads, subway excavation, etc.—constituted the third largest class; in their case the favorable influence of outdoor occupation was offset by exposure to dust, long, uncertain hours, night work, temptation to drink, etc. Miscellaneous factory workers, including those employed in making buttons, corsets, and typewriters, but not in the leading industries of the State, came next. The shoeworkers were fifth on the list, furnishing more tuberculosis patients than any other industry in the State. Dust and poisons from blacking, dyes, polishes, etc., were regarded as the unhygienic elements in this industry. Mill operatives—workers in the cotton, hosiery, paper, silk, wool and worsted industries—came next. Teamsters, waiters and waitresses, seamstresses and dressmakers, tailors and tailoresses, stoneworkers, woodworkers, bakers, metalworkers, printers, and jewelers are among the workers whose occupations show unduly high tuberculosis incidence.

The Postgraduate School for the Study of Tuberculosis was formally opened at Saranac Lake, May 17, 1916. The school is a memorial to Dr. Edward Livingston Trudeau, and will be known by his name. The sum of \$500,000 has been subscribed toward its support and the fund is to be known as the Edward Livingston Trudeau Foundation. The school is particularly designed to facilitate the work of physicians who intend to specialize in the study and treatment of tuberculosis. See also VETERINARY MEDICINE.

**TUFTS COLLEGE.** A non-sectarian educational institution, with arts, engineering, and theological departments in Medford, Mass., and medical and dental schools in Boston. The latter two are co-educational. In all departments in the fall of 1916 there were 1737 students and the faculty numbered 279. Benefactions amounting to \$180,919 were received. The college has in productive funds \$1,583,993, and in 1916 had a net available income of \$51,105. In the library were 75,000 bound volumes and 67,000 pamphlets. President, Hermon Carey Bumpus.

**TUITION CHARGES, COLLEGE.** See UNIVERSITIES AND COLLEGES.

**TULANE UNIVERSITY.** A non-sectarian institution for the education of men at New Orleans, La. It was founded in 1834. The student enrollment in the fall of 1916 was 2725 and there were 312 faculty members. The productive funds of the institution amounted to \$4,305,187 and the total income from all sources was \$371,714. The library contained 70,700 volumes. President, Robert Sharp.

**TUNGSTEN.** See CHEMISTRY, INDUSTRIAL; PHYSICS.

**TUNGSTEN LAMPS.** See ELECTRIC LIGHTING.

**TUNIS.** A French north African protectorate lying between Algeria and Tripoli and covering 167,400 square kilometers (64,900 square miles). The population was estimated in 1911 as 1,929,003—1,730,144 indigenous Arabs, Berbers, Moors, etc.; 50,383 Jews, 148,476 Europeans (46,044 French, 88,082 Italians, 11,300 British and Maltese, 696 Greeks, 587 Spaniards, 1767 other). Tunis, with 164,808 inhabitants (69,475 Europeans), is the capital. Agriculture in the low regions and grazing in the fertile mountain valleys are the principal industries. The mining industry has developed in recent years; copper, lead, zinc, phosphates, and iron are mined. The fisheries are valuable. Wool spinning and weaving, with the manufacture of carpets, slippers, saddles, and pottery, are the principal indoor industries. Total imports 1913, 144,254,000 francs; exports, 178,663,000. A French resident-general administers the country.

**TUNNELS.** Tunnel construction in 1916 proceeded in various parts of the world, with but minor changes in methods, and figured in schemes of railway construction and improvement, water supply and irrigation projects, and municipal subways and rapid transit lines. Wherever long bridges were proposed, as across the Hudson River at New York, across the Mississippi at New Orleans, or at San Francisco Bay, engineers were always ready to advance some alternative scheme of tunnel construction, and developments made in the previous quarter century in many cases lent great force to their arguments. In Europe the proposed Channel tunnel came to the fore again with increased government, technical, and popular support, while even at Constantinople it was proposed to tunnel under the Bosphorus.

**TWIN PEAKS TUNNEL.** The Twin Peaks tunnel for San Francisco progressed at a rapid rate during 1916, and was to be completed in May, 1917. Less than one-fourth of the total length of the tunnel, 1200 feet, remained to be excavated at the end of the year, and practically all stations and other accessory construction were finished. Several hundred workmen were employed at both ends in day and night shifts, and the progress of the completed bore was about 12 to 15 feet per day from each end. The concrete gang followed the excavating crew closely, and sides, arch, and invert were completed as fast as the heading advanced. Pneumatic placing machines were used to expedite progress of the concreting. The two ventilating shafts from the tunnel to the surface above were completed, and one of these was used for pumping out the seepage water, which was coming into the tunnel at the rate of 300,000 gallons per day.

**PROPOSED 30-MILE CASCADE MOUNTAIN TUNNEL.** The longest tunnel ever projected was proposed during the year by Gen. H. M. Chittenden, U. S. A., Ret., to pierce the high mountains of the Cascade Range which divides eastern and western Washington. In a notable paper published in *Engineering News*, Nov. 16, 1916, General Chittenden suggested this long tunnel with a summit not much over 1000 feet above sea level to afford a short and easy access to the Puget Sound region and the Northwest. The existing tunnels all had heavy grades and mountainous approaches, and accordingly it was proposed to

build the new tunnel at the point where the Columbia River comes nearest Puget Sound in its southern swing through Washington at the mouth of the Weenatchie River, connecting its valley on the east with that of the Skykomish on the west. Such a double track tunnel would save all the great lines running to the coast vast climbs and the incidental dangers of snow slides and avalanches. The dimensions proposed were width, 30 feet; height at centre, 25.5 feet; height over outer rail, 22.5 feet; net cross-sectional area (after lining), about 650 square feet; gross area in excavation, about 850 square feet. General Chittenden computed that the tunnel could be completed from a single shaft in 13 years at a total cost including interest of \$49,318,000, or from four shafts in 5.5 years at a corresponding cost of \$43,237,000. The possibilities and difficulties of the tunnel were discussed in the paper, and the difficulties do not seem in any way insuperable when considered in the light of the experience of the Rogers Pass tunnel on the Canadian Pacific Railway opened during the year. The proposition, however, was only advanced on the responsibility of its author, and for general consideration without any special idea of immediate construction.

**ROGERS PASS TUNNEL.** The Rogers Pass tunnel under Mount MacDonal in British Columbia was opened for traffic by the Canadian Pacific Railway late in the year. The unusual method of constructing this five-mile tunnel has been discussed in the YEAR BOOKS for 1914 and 1915. The cost of the work was \$6,500,000, and it will save an expensive climb over the mountains.

**ROVE TUNNEL.** Notwithstanding the war, work was being prosecuted vigorously on the Rove tunnel, the world's largest tunnel, and it was put through on May 7, 1916. This tunnel is an important element of the Marseilles-Rhône Canal, an artificial waterway 51 miles in length extending from the Rhône River at Arles to the Bay of Marseilles. The typical section of this canal is 82 feet wide and 10 feet deep, and the tunnel was being constructed to pierce the mountain ridge north of the city and afford direct access to its harbor. The tunnel is  $4\frac{1}{2}$  miles in length and the typical section is a square invert 59 feet wide and 15 feet deep, with an approximately semicircular arch of 41 feet radius, affording an excavated section 79 feet wide and 50 feet high, with a clear area of 3250 square feet. Such a section is unique in that it is about six times as great as an ordinary double track railway tunnel. Furthermore, while the length is not extreme in comparison with other European and American tunnels, yet the yardage of the excavation easily puts it in first place. Thus in comparison with other European tunnels we have the following relative length and excavation:

Name	Length in miles	Excavation in cub. yds.
Rove .....	4.5	2,800,000
Simplon .....	12.3	2,100,000
St. Gothard .....	9.3	1,800,000
Loetschberg .....	9.1	1,000,000

The method of construction is to excavate three arch headings which are opened one into the other so that a central section of rock is left to be removed. There is a masonry lining which is backed on concrete made of a special lime cement. Work was carried on from both

ends mostly through hard rock that requires little if any timbering. The headings were each about 100 feet in cross section and progressed at a rate of about 15 to 18 feet a day. Compressed air locomotives were used in the headings and steam locomotives in the main section and artificial ventilation was employed. The canal and tunnel are comprehensively described in *Le Génie Civil* for May 20, 1916, and in outline in the American engineering press during the year.

**CHANNEL TUNNEL.** This long-debated project, the modern plans of which were discussed in the YEAR BOOK for 1913, continued to be a leading item of interest among engineers and was described fully in *Le Génie Civil* (Paris, October 21st), abstract in *Engineering Record* (New York, November 25th), and in the *Engineering Review* (London). Mr. Asquith, the British Premier, stated that the entire project with the modernized plans would be taken up by the cabinet at an early date, and Arthur Fell, chairman of the committee of members of the House of Commons in favor of the Channel tunnel, was quoted as saying that the plans for construction were so far advanced that work could be commenced immediately whenever the necessary legislation was secured. The estimated cost of the tunnel would amount to about \$70,000,000, and a conservative estimate of the ordinary commercial traffic would show a net return of from 5 to 7 per cent. It would reduce the running time between Paris and London by five and a half hours with the elimination of great expense and delay for transfer of passengers and freight. Furthermore, in view of the war and the friendly relations between England and France the tunnel would have a strategic importance that could not be underestimated and might save a possible food blockade of Great Britain.

**OTHER TUNNELS.** Among engineering projects discussed in Europe during the year in spite of the ravages of war, was a tunnel under the Bosphorus. Detailed plans showing that the work was feasible and would be financially profitable were developed and discussed at Constantinople where the strategic importance was appreciated as elsewhere. Direct communication between European and Asiatic Turkey previously had been discussed especially in view of the construction of the Anatolian and Bagdad Railway, but this had involved bridging the narrows at Rumili Hissar. The Bagdad Railway had involved some of the most notable of modern railway tunnel construction, especially through the Taurus and Amanus mountains. The last tunnel on the Taurus mountain section was blasted through in November, 1916. See under TURKEY.

Several new tunnels for water supply were proposed during the year, the most notable of which was the 18-mile rock tunnel for the new Schoharie supply to the Catskill aqueduct system of New York City. This is discussed under AQUEDUCT. See also RAPID TRANSIT for progress on various municipal subways; BRIDGES; WATER WORKS and WATER PURIFICATION.

**TURBINES.** See STEAM TURBINES; WATER POWER.

**TURKEY.** Formerly a vast empire comprehending extensive possessions in Europe, Asia, and Africa, but greatly reduced by wars with Italy and the Balkan States. Constantinople is the capital.

**AREA AND POPULATION.** Previous to the wars in the Balkans, Turkey in Europe covered 169,-

300 square kilometers (65,367 square miles), carrying a population estimated at 6,132,200. After the first war in the Balkans the treaty of London (May 30, 1913) fixed the northwest boundary of Turkey by a line running through Adrianople vilayet from Enos (Ægean Sea) to Midia (Black Sea); but during the second war Turkey reoccupied the city of Adrianople and with the city recovered more of Adrianople vilayet. This territory was conceded to her by the treaty of Bucharest (Aug. 10, 1913), and, with Constantinople and Chatalja, is all that remains to Turkey of her European domains. Constantinople (city) has, with suburbs, 1,200,000 inhabitants; Adrianople, 123,000.

*Asiatic Turkey.* Turkey in Asia is divided into Asia Minor (501,400 square kilometers, 9,089,200 inhabitants), Armenia and Kurdistan (186,500 and 2,470,900), Syria and Mesopotamia (637,800 and 4,288,600), and Arabia (441,100 and 1,050,000); these divisions are subdivided into vilayets and mutessarifats. Anatolia is another name for Asia Minor. No official census having been taken, the population of the following cities, all in Asiatic Turkey, must be regarded as estimates: Damascus, 250,000; Smyrna, 250,000; Aleppo, 200,000; Beirut, 140,000; Bagdad, 125,000; Erzerum, 120,000; Anium, 95,000; Manissa, 90,000; Jerusalem, 84,000; Aidin, 80,000; Brussa, 80,000; Diarbekr, 80,000; Mosul, 80,000; Sivas, 78,000; Urfa, 72,000; Aintab, 70,000; Mecca, 70,000; Busra, 60,000; Trebizond, 60,000; Adana, 50,000; Homs, 50,000; Hodeida, 49,000; Medina, 49,000; Angora, 38,000.

*Arabia* is the great peninsula of southwestern Asia, lying south of Syria, Mesopotamia, and the Persian Gulf. The estimated area is about 1,200,000 square miles, including the Syrian Desert and the Sinaitic Peninsula; without these, about 1,000,000 square miles. Most of the country is very little known, fully a third of it quite unknown, to the Christian world, while the total number of inhabitants is wholly conjectural. One estimate of the population is 7,500,000, but this figure is generally believed to be much too high. Arabia is mainly a desert country, incapable, except in certain districts, of supporting more than a sparse population. Most of the country, also, has not come under foreign, even Turkish, domination, being governed, so far as there is any government at all, by the tribal leaders. Arabia includes: the Sinaitic Peninsula, which belongs to Egypt; along the Red Sea, Hejaz and Yemen, Turkish vilayets; between these, the mountainous region of Asir, where Turkish dominion is nominal; at the southwest corner, Aden, which is British; to the east, along the southern coast, Hadramaut, Mahra, and Shih; at the southeast, Oman, an independent state under British influence; Hasa, bordering the Persian Gulf northwest of Oman-Hasa, together with Nejd, is nominally a Turkish vilayet; and, in the interior, the Syrian Desert, the desert region of Nufud, Nejd, and, at the south, the great desert territory of Dahna. Among the more important towns are Medina, Mecca, and Jidda, in Hejaz; Hodeida, Sana, and Mocha, in Yemen; Aden, Makalla, in Hadramaut; Muscat, in Oman; and Riad, in Nejd.

*EDUCATION, ETC.* The population is made up of Turks, Greeks, Arabs, Albanians, Bulgarians, Serbians, Vlachs, Kurds, Armenians, Jews, Syrians, Circassians, and other races. Moham-

medans are in the majority. Gregorians predominate in Armenia. There are also Roman Catholics, Jews, Nestorians, etc. Primary education is provided by the Mohammedan priesthood attached to the principal mosques, and consists chiefly in the reading of the Koran. Secular education in the western sense is almost entirely lacking, except in non-Moslem institutions, which meet with no opposition or restraint. Secondary schools are few and special schools almost unknown. The fundamental laws are based upon the Koran. Mohammedan priests are estimated to number about 11,600 and are subject to the sheikh-ul-Islam, who is appointed by the sultan: their priestly office is, however, hereditary. The private ecclesiastical revenues amount to about 20,000,000 piasters per annum. The state pays to the sheikh-ul-Islam 7,031,520 piasters annually, and to the naibs and muftis 7,876,646. The condition of the peasant class is most miserable, the tithe and customs system effectually crippling incentive and breeding chronic poverty, uncertainty, and fear.

*PRODUCTION.* The soil is generally fertile and agriculture by primitive methods is practiced. The farmer, however, makes no attempt to progress, or to produce in quantities beyond his immediate need: the method of levying a government tax in kind upon all produce serves as an effectual check to enterprise, and an additional tax is laid upon all produce exported from one vilayet or subdivision into another. Moreover, the labor problem is acute throughout the empire. No reliable statistics of area under cultivation nor of production exist. The annual output of olive oil has been estimated at about 750,000 quintals, of which 150,000 quintals are exported, 150,000 are consumed by the soap factories, and the remainder by the home markets. The increased cost, however, has led to the substitution of animal fats and other oils. Opium production in 1909-10 was about 10,000 cases, of extra quality.

The world's supply of true Mocha coffee comes from Yemen; it is all grown for export as the Yemen Arab himself never uses it. Cotton is raised. Other products are figs (from Smyrna), raisins, wine, nuts, valonia, canary seed, and linseed. Large areas are under forest. Sheep-raising is practiced, and the fisheries products are valuable. Wool and mohair are exported. The abundant mineral wealth of the empire is undeveloped. Transportation facilities are inadequate, and labor is lacking. Salt is a government monopoly. Coal is mined to some extent; also phosphate of lime, copper, zinc, iron, silver, gold, antimony, etc. The manufactures include silk, carpets and shawls, leather, firearms, brassware, etc. Flour, cotton, and woolen mills produce goods for home consumption and also for export. But manufacturing interests meet with the labor problem, which so far has proved insurmountable for large enterprises.

*COMMERCE.* Figures for the trade of the Ottoman Empire are incomplete and far from reliable. The returns from countries of origin and destination all differ widely when compared with Turkish returns, the Turkish export figures being much too low. As reported for the year ended Feb. 28, 1912, the imports were valued at £143,551,035 and the exports at £123,921,326.

The main articles of import are cottons, sugar, cereals, linen, yarns, woolens, rice, petroleum,

etc.; exports, raw silk and cocoons, raisins, cereals and derivatives, mohair, figs, coffee, opium, skins, valonia, vegetables, minerals, fruits, carpets, etc.

**COMMUNICATIONS.** The length of railway line in European and Asiatic Turkey on Nov. 1, 1914, not including the most recently opened sections of the Bagdad Railway, was as follows: \*Salonica-Monastir, 136 miles; Constantinople-Salonica, 317; Oriental Railways, 593; \*Haidar-Pasha-Angora, \*358; Eski-Shehr-Konia, 283; Mudania-Brusa, 25; \*Smyrna-Cassaba, 165; Alasheir-Afion-Karahissar, 156; Smyrna-Aidin, 320; \*Konia-Eregli-Persian Gulf, 125; Mersina-Adana, 42; Beirut-Damascus, 96; \*Rayak-Aleppo, 295; Damascus-Medina, 812; Jaffa-Jerusalem, 54; Haifa-Deraa, 105. The railways marked \* have a kilometric guarantee. The guarantee paid by the Debt Council amounted to £T528,918 in 1911; £T420,141 in 1912; £T341,388 in 1913; £T238,042 in 1914. In Asiatic Turkey the Turkish government controls 1116 miles, or 31 per cent, of the total railway mileage; German influence extends over 1327 miles, or 36.8 per cent of the total; French over 760 miles, or 21 per cent of the total; Belgian influence over 25 miles, or 0.7 per cent of the total; and British influence over 378 miles, or 10.5 per cent of the total.

The great war in Europe served to increase rather than impede the rate of construction of the Bagdad Railway, especially east of the Euphrates. By February, 1915, the line had reached Tel-el-Abiad, 37 miles east of the river, and by July 23, it was ready for traffic as far as Ras-el-Ain, some 80 miles beyond. Then construction was carried further about 65 miles to Nisibin. Trains during 1916 were able to go to this point and beyond. Here there was a long gap to Jibbara on the Tigris. On the Taurus section, where the line pierces the Taurus range from Karapunar to Dorak, a series of some 11 miles of tunnels connected by embankments comprises the 20-mile distance, and on November 13, the principal tunnel, the Bilemelik was reported completed. In the previous year a tunnel some three miles long through the Amanus range had been finished. The sections last named were considered important links in order to establish direct communication between the Bosphorus and the Egyptian frontier. The line as projected extends from Konia to the Euphrates and to Bagdad and it was divided into three sections by the unfinished gaps. The line from Konia to Basorah, at the head of the Persian Gulf, is 1360 miles in length, and the various sections completed and in operation in 1915 were located as follows: Taurus region, 176 miles; Adana plain, 110 miles; Amanus Mountains and the Euphrates, 160 miles; Babylonia, 82 miles. The Adana-Mersina branch, 41 miles in length, gives access to the sea. In addition to the main line there were some nine branches, for which plans were prepared, amounting to 551 miles, and with the Adana-Mersina and Toprak-Alexandrette portions built and working, 79 miles in length, the projected railway system for this part of Asiatic Turkey would make a total of 1990 miles when completed.

It was reported late in the year 1916 that the Turkish government had canceled the French concession for building a railroad from Smyrna to Kasaba in Asia Minor, 54 miles southeast of Konia, and the Franco-Belgian concession for a

line from Mudania on the Sea of Marmora to Brusa, about 100 miles southeast. These railways are to be built by the state.

**FINANCE.** The monetary unit is the Turkish pound of 100 piasters; its par value is \$4.39642. Budget estimates are shown below in pounds Turkish:

	1915-16	1915-16	1916-17
Revenue . . . . .	80,514,159	25,996,010	22,961,680
Expenditure . . . . .	84,590,561	35,657,540	36,817,120

The largest item of expenditure is for the service of the public debt, which represents 43 per cent of the total estimated outpay. Paper currency totaling £T5,500,000 has been placed in circulation to be repaid in gold six months after the signing of peace, and a further issue will be placed in circulation to be redeemed one year after signing peace. The Ottoman Bank has been authorized to increase the number of its bank notes in circulation. At the beginning of the war this bank had in circulation notes totaling £T4,000,000 and up to the time of presenting the budget an additional £T1,600,000 had been put in circulation. The ordinary expenditure for military establishments constitutes 28 per cent of the budget. This corresponds to the ordinary annual appropriations under this heading, and is in no way related to the extraordinary credits and expenditures caused by the state of war. The total debt stood in April, 1914, at £T151,656,007. The amount borrowed by Turkey for the reestablishment of the Constitution down to 1916 is £T52,488,326, of which £T47,540,012 were required to meet deficits (due to pre-constitution borrowing) and £T7,948,304 for railways. Since the beginning of the war Turkey has received advances from the Central Powers amounting to £T21,613,816. In addition there were to be two further loans in Germany, one of £T20,000,000, and the other of £T1,240,000; making a grand total of £T42,853,816.

**NAVY.** See NAVAL PROGRESS.

**GOVERNMENT.** Turkey is a constitutional hereditary monarchy of which the sultan is both temporal and spiritual head. The succession rests in the senior male descendant of the house of Osman, sprung from the imperial harem. The sultan does not marry; but all children born in the harem, whether of free or slave women, are counted legitimate and of equal lineage. A grand visier appointed by the sultan forms the cabinet; the sheikh-ul-Islam is, under the sultan, the director of ecclesiastical affairs. For administrative purposes the empire is divided into vilayets, sanjaks, kazas, nahies, and kariés. The legislative body is composed of a senate and a chamber of deputies. The constitution of Dec. 23, 1876, abolished in 1877, was reestablished July 23, 1908. Mohammed V, born 1844, emperor of the Ottomans, khalif of the Mussulmans, thirty-sixth sovereign of the house of Osman and twenty-ninth since the taking of Constantinople, is the third son of Abdul Mejid. He succeeded his brother, Abdul Hamid, deposed April 27, 1909; Abdul Hamid had succeeded his eldest brother Mohammed Murad (deposed Aug. 31, 1876), who had succeeded his uncle Abdul Aziz (deposed May 30, 1876), who had succeeded the father of the present sultan deceased June 25, 1861. The oldest son of the sultan succeeds only when there are no surviving uncles or cousins older than himself. The heir-presump-

tive is Yussuf Izzedin (born 1857), son of Abdul Aziz.

### HISTORY

REPORTS ON THE ARMENIAN MASSACRES. Charges against the German government in connection with the Armenian massacres varied from that of actual instigation to the accusation that it took no steps to prevent the massacre. In the summer of 1916 Rev. Harold Buxton, secretary of the Armenian Refugees Fund, spent three months in relief work in the region where the massacre had taken place. He reported in August that the German government, although its influence at Constantinople was supreme and although its consuls were at their posts in Asia Minor, did nothing to prevent the massacre, which was moreover carried out in a very thorough and systematic manner, unlike the previous massacres which had been the outcome of a sudden spread of fanaticism among the Turks. There was evidence, however, that some of the German consuls tried to aid the Armenians, and to prevent their deportation. It was said for example that the German consul at Erzerum appealed to the German ambassador at Constantinople, but received a reply that the German officials could not interfere in the internal affairs of Turkey. Mr. Buxton also reported that the figures concerning the massacres and deportation probably were not exaggerated. Of the 2,000,000 Turkish Armenians he estimated that 1,000,000 had been deported, and 500,000 massacred. Those who escaped to Russian territory numbered, he thought, about 200,000, while the rest were in concentration camps between Aleppo and Mosul, and near the frontiers of Mesopotamia. He reported that these camps, being in a region where Turkish authority was supreme, were still in danger, and that the sufferings from cruelty, privations, and disease were very severe. Another detailed account of the massacres published in 1916 was *La suppression des Arméniens*, by M. René Pinon, in which he attempted to show that the dictum of Abdul Hamid—that the only way to suppress the Armenian question was to suppress the Armenians—had been acted upon with savage thoroughness. It was charged that the atrocities were committed with the complete knowledge of and virtually in complicity with Germany, for the German representatives at Constantinople and in Asia Minor must have been well aware of the circumstances. There had been no official opposition on the part of the Germans, who had even said that the course of the Turks was defensible. Count Reventlow, for example, had declared that Turkey had not only the right but even the duty of chastising the rebellious and bloodthirsty Armenians. According to M. Pinon, about a million Armenians in the provinces had been deported and driven toward the south. Very often they were first exiled and then massacred. From Samsun all the way to Diarbekir not an Armenian was left. Most of them had been massacred, but some had been taken away and others had been converted to Islam. Specific reports of alleged eye-witnesses gave the most revolting details of starvation and massacre. Among those quoted was the United States consul at Karput, who said that the deportations began with the arrest of several thousands of men. Eight hundred more were arrested on

July 5th and on the 6th they were sent up to the mountain, where they were tied together in groups of fourteen and shot. In a neighboring village another group was shut up in the mosque and in the neighboring houses. After being left there three days without food or water they were taken into the neighboring village, backed up against a wall of rock, and shot. Those who survived the bullets were cut to pieces with bayonets and knives. Similar reports, though fragmentary, were so numerous as to give the general impression that the cruelties far exceeded those of any previous massacre and that the Armenians had reason to regret the reign of Abdul Hamid. To cite one more instance, a German traveler, who had recently died, left notes in which he reported the killing of men, women, and children at Marash under circumstances of the most shocking cruelty, accompanied by torture and followed by mutilation of the dead. He said that after the massacre the mob appeared before the German hospital and cried "Long live Germany." It was recorded that the Mussulmans frequently declared it was Germany that had caused the massacres. The number of deaths was variously estimated, the figures being as high as 500,000.

A report of the Armenian Committee for Armenian and Syrian Relief, published at the close of the year, contained specific details indicating the worst conditions. A visit to the "concentration camps" along the Euphrates convinced the observer that they were not so much camps as herding places where thousands were hemmed in by Turkish soldiers and left to die. They died of all manner of diseases, but chiefly of starvation. The camps are scattered throughout North Syria and Arabia, in the desert. Those described in the report were in the Plain of Meskene and its vicinity. In that plain alone, it was said, 60,000 Armenians were buried in mounds containing two or three hundred bodies each. They had perished from starvation, typhus, intestinal and other diseases. He estimated that in the regions visited 50,000 were perishing of starvation. The sufferings of the women at the hands of the tribesmen, who had driven them to these camps, were terrible, and great numbers had died on the way. In the camps they were without shelter or means of procuring food. He believed that unless relief came before the winter there would be no more Armenians left. The British government published a comprehensive volume of documentary and personal evidence under the title of *The Treatment of Armenians in the Ottoman Empire 1915-16*, with a preface by Viscount Bryce.

THE TURKISH REPLY. In February the Turkish government published an official defense of its course in Armenia, alleging that the massacres and deportations had been the result of insurrections incited or indirectly caused by the Entente Powers. A further presentation of the Turkish view was given to the press on October 25th by the Turkish Foreign Minister, Halil Bey, who declared that the Armenians had risen in revolt. He contended that the Young Turk party had dealt fairly by the Armenians. They could not grant their demands for autonomy because the Armenians were only a majority in this territory and there was a large Moslem element which, if this were done, would lose their independence. They could, however, give them a share in the government, and this they had

already done. There had been many Armenians in the Chamber of Deputies and several in the Senate. An Armenian had been a minister and nearly all the vice-ministers were Armenians. When the war broke out the Armenians gathered munitions and perfected their military organization. He and others had warned their representatives that while they were free to make overtures to the Entente after the war in the event of Turkey's defeat, any movement against Turkey during the war would be sternly repressed. When Russia invaded Asia Minor the Armenians had revolted. The punishment had followed. It had been impossible to restrict repressive and punitive measures to any single locality because the uprising had been so well organized and was so widespread. Prompt and sweeping measures had been necessary.

**ARABIAN INDEPENDENCE.** As the summer advanced, reports of a rising in Arabia were frequent, and finally it became known in June that the movement for Arabian independence under the Grand Sherif of Mecca was well advanced. The campaign began on June 9th. The Grand Sherif raised three armies, which he placed respectively under the commands of his three eldest sons. One of the armies besieged Medina, another captured Taif, and the third captured Jeddah. Toward the end of June it was reported that Arabian independence of Turkey had been proclaimed, and that the revolutionary movement had met with marked success. The news was received with enthusiasm by the Moslem populations of India and Morocco. The uprising was in general the outcome of the Pan-Arab movement for the expulsion of the Turks, which was stimulated by the resentment among Mohammedans of the German control of Turkey. The following account appeared in an Arab journal toward the close of the year: The Sherif of Hedjaz, Hussein, on hearing of the atrocities committed by Djemal Pasha in Syria, sent his son to intercede on behalf of the persecuted Arabs, but instead of regarding this intervention, the Turkish leader tried to arrest him and renewed his persecutions. On the return of the Sherif's son, there was a meeting of the leading men of Hedjaz to the number of 400, and he explained to them the situation. The economic condition was growing serious and the people were beginning to lack food. The meeting pronounced in favor of an immediate declaration of independence and chose as its chief the Sherif Hussein. The public ceremony of the coronation, in accordance with the Arab traditional rites, was celebrated at Mecca. The notables assembled in the vestibule of the Holy Temple of the Caaba and the new charter of the Arab Kingdom was read. The dignitaries and representatives of all classes of the people then filed before the newly chosen king, touched his hand, and pronounced their agreement to the contract or formal act by which the sovereignty, according to the ancient tradition of the Arabs, is acknowledged. In August the Sherif of Mecca addressed a proclamation to the entire Moslem world, saying that the Emirs of Mecca had been the first to recognize the Turkish government, and had remained loyal down to the time when the misconduct of the party of Union and Progress brought disaster to the Moslem world. After condemning in general terms the party of Union and Progress, the proclamation went on to specify offenses against religion

and referred to cruelties inflicted upon cultured Moslems and Arabs of distinction. When the Empire fell into the hands of Enver Pasha, Djemal Pasha, and Talaat-Dey, conditions became intolerable. It called upon the Moslem world to defend the faith of Islam, to elevate the Moslem people, and to build up a code of justice in harmony with the principles of religion. It referred especially to the sacrilegious endeavor of the Turks to shell the Holy Temple. In August unsuccessful negotiations were reported between Arab leaders and Enver Pasha as representing Turkey for the recognition of an Arabian Caliphate and Arabian autonomy. Early in September the French government sent a delegation of French Moslems to congratulate the new government and to contribute financial aid. The British government cooperated and British Moslems joined the expedition. On November 11th a communication from Mecca was delivered to the United States government asking for recognition. See **WAR OF THE NATIONS.**

**TURNER, SIR WILLIAM.** A British anatomist and educator, died in Edinburgh Feb. 15, 1916. He was born in Lancaster in 1832, and graduated as bachelor of medicine from London University. In 1854 he was chosen by the famous surgeon Goodsir to be his senior demonstrator in anatomy at the University of Edinburgh, and there he remained, succeeding Goodsir in 1867 as professor of anatomy. This chair he held till 1903, when he became principal and vice-chancellor of the university. Dr. Turner had been president of the Royal Society of Edinburgh, the General Medical Council (1898-1904), and the British Association for the Advancement of Science (1900). Knighted in 1886, he received the K.C.B. in 1901. Honorary degrees were conferred upon him by many universities in Britain and Canada, and by the Western University of Pennsylvania (now University of Pittsburgh); and he was elected to membership in learned societies in all parts of the world. He became known as a successful administrator, as well as a distinguished teacher and investigator; he was an authority on comparative anatomy and anthropology, and especially on craniology, and owned a large collection of human skulls. His writings, comprising 276 titles, were in the form of memoirs, reports, and contributions to scientific journals. Of the *Journal of Anatomy and Physiology*, which he founded in 1866, he was editor till 1894.

**TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE.** A non-sectarian co-educational institution for negroes. It was founded in 1881 at Tuskegee, Ala. The total enrollment in all departments in the fall of 1916 was 2535 students. The faculty numbered 158. During the year Maj. Robert Russa Moton, known for his work as commandant of cadets at Hampton Institute, became principal as successor to the founder, Booker T. Washington. An anonymous gift of \$250,000 was received for permanent improvement. On May 31st the endowment from which the institute received an income amounted to \$1,957,536. The library contains 22,804 volumes.

**TWAIN, MARK.** See **LITERATURE, ENGLISH AND AMERICAN, Fiction, American.**

**TYPHOID FEVER.** The *Journal* of the American Medical Association, Nov. 17, 1916, presented its fourth annual survey of the ty-

phoid fever mortality in cities of the United States having over 100,000 population, 60 cities being comprised in the survey. The cities are divided into groups, the first including the nine largest cities having a population over 500,000. In seven of these a new low typhoid record was established in 1915, the exceptions being Cleveland and Pittsburgh. In New York City despite an epidemic of considerable proportions, which occurred in Brooklyn, the rate was slightly under that of 1916. The New York Department of Health ascribes the steady reduction in typhoid fever during the past few years to the effective chlorination of the Croton water supply and the pasteurization of milk. These measures had been effective in other cities. Boston and Philadelphia also had localized outbreaks of typhoid. The lowest typhoid rate in this group, 5.4 per 100,000 population, occurred in Chicago; the highest, 24.7 per 100,000 population, occurred in Pittsburgh. Group 2, comprising 10 cities having a population of 300,000 also had a low mortality. Astonishing improvement was shown by the city of Milwaukee, which in 1912 stood at the bottom of the list, whereas during 1915 its mortality rate per 10,000 was only 2.5. The improvement seems mainly due to the reduction of water-borne infection brought about by treating the water supply with chlorine. New Orleans still maintains a relatively high mortality rate. The lowest rate in this group was that of Newark, with 2.5 per 100,000 population. In group 3, comprising cities with from 200,000 to 300,000 population, improvement is still more noticeable, Portland, Ore., standing at the head of the list with 5.2 per 100,000 population, and Columbus, Ohio, last with 13.3 per 100,000. Group 4, containing cities with from 125,000 to 200,000 population, includes several Southern communities which habitually have high mortality rates; but even Atlanta, Birmingham, and Memphis show a lower rate than in previous years. In this group Omaha shows a rate of 3.7, and Birmingham, Ala., a rate of 33.7. In group 5, cities having 100,000 to 125,000 population, Cambridge, Mass., has the lowest mortality rate of any city in the United States, Nashville, Tenn., had the highest rate in this group, namely 35.1 per 100,000.

A summary of the typhoid situation during the period of this survey indicates a general decrease in the typhoid mortality rate throughout the country.

The New York City Department of Health, in its effort to educate the public in typhoid prevention, devotes the *Weekly Bulletin* of Aug. 26, 1916, to a popular exposition of the nature, prevention, and method of communication of this disease. The matter is put in plain, understandable terms. Twelve personal rules on how to keep from getting typhoid fever are thus given: "Keep yourself in good health. Do not use alcoholic drinks. Keep your home and your body clean. Always wash your hands before eating. Drink only the best milk; if in doubt, boil it. Drink only pure water; if in doubt, boil it. Eat only pure, good food. Fresh-cooked food is safest; heat kills the germs. (But the heat of tea and coffee is not often high enough to kill the germs in milk and cream.) Avoid salads, raw vegetables and raw oysters, unless you know they come from a clean place. Wash ice when it comes and keep the icebox clean. Do not put ice in drinking

water or on food. Deal only with good, clean food stores. Don't eat at dirty restaurants. Keep flies out of your rooms and away from your food. Be careful when you go to the country; be sure of what you eat and do not drink from a strange spring or stream. Typhoid fever is especially a country disease. Be immunized before going on a vacation. Never visit where there is a case of typhoid fever. Be careful about friends who have had typhoid fever; they may be 'carriers.' Where there is an outbreak of typhoid fever, use only boiled water for drinking, and also boil milk just before it is used. Eat no raw food of any kind. Fresh-cooked, hot food is safest. If typhoid fever is in your house or neighborhood, or you are exposed to the disease in any way, or are likely to be, have yourself immunized."

The value of antityphoid vaccine has been established beyond all possible doubt. Attempts are now being made to immunize individuals against typhoid and paratyphoid fever at the same time, since these diseases occur under similar conditions and are often difficult to diagnose from one another in their early stages. The administration of mixed vaccines is looked upon by experts somewhat unfavorably, since the mechanisms of body defense are little understood and serum reactions are very complex. Nevertheless, Kabeshima has introduced into the Japanese navy a mixed vaccine comprising equal quantities of *Bacillus typhosus* and the *alpha* (A) and *beta* (B) paratyphoid bacilli, the total dose not exceeding that of the typhoid bacillus alone. As observed, the reaction, both local and general, was similar to those given by the typhoid vaccine, and was not especially severe. The statistics given for inoculations against typhoid and paratyphoid with the occurrence among inoculated and uninoculated, do not justify the drawing of any conclusion as to the prophylactic value of mixed vaccines. Among other observers Vincent speaks highly of the value of mixed vaccine inoculation, basing his conclusions on about 4000 cases. He suggests that it is just as reasonable to vaccinate simultaneously against typhoid and paratyphoid fever as against typhoid and smallpox, which is commonly done. Widal and Chantemesse also hold views favorable to mixed vaccines. The latter suggests a vaccine containing 50 per cent of *Bacillus typhosus*, 30 per cent *Bacillus paratyphosus* A and 20 per cent *Bacillus paratyphosus* B.

**TYPHUS FEVER.** Plotz, of New York, discoverer of the causative bacillus of the disease, gives the results of his work in Serbia in prophylactic immunization against typhus fever. This consisted in the administration of a vaccine containing a suspension of 15 strains of *B. typhi-eazanthematici* (the organism discovered by Plotz and generally accepted as the specific cause of typhus) in physiologic salt solution, which had been subjected to a temperature of 136.4 to 140 F. for a period of 30 minutes to one hour. Each cubic centimeter of this sterilized suspension contained about 2,000,000,000 bacteria, and the vaccine was preserved by the addition of 0.5 per cent carbolic acid or tricresol. Three prophylactic injections were given at intervals of five to six days. In Serbia, 5251 men were vaccinated both before and after the Bulgarian occupation. As the supply of vaccine was limited, immunization was largely

confined to orderlies and members of the hospital staff who were constantly exposed to infection. Among the 5251 vaccinated, there occurred three cases of typhus fever. As the general incidence of the disease among non-vaccinated of the same class is vastly greater than this, immunization is looked upon as a distinct factor in preventing its development. For example, in the town of Radomir, Bulgaria, 20 of the personnel in the hospital developed typhus before the institution of prophylactic immunization. After this was done, although the number of hospital admissions increased, no further cases arose among the members of the staff. In Russia work was done chiefly in the portion of Volhynia occupied at that time by the Austro-Hungarian forces. The cases in this district mounted into the tens of thousands. As in the Balkans, an effort was made to limit vaccination to those who were most exposed to infection, namely, members of the hospital staffs and sanitation units. In 46 institutions 3169 persons were immunized. Up to the end of May, 1916, only three cases of typhus occurred among the vaccinated, whereas, although precise statistics are not available, the unvaccinated suffered more severely. See VITAL STATISTICS.

**TYBOL (TIBOL).** See AUSTRIA-HUNGARY.

**U-53.** See NAVAL PROGRESS; UNITED STATES AND THE WAR.

**UGANDA PROTECTORATE.** A British East African possession, covering an area estimated at 121,437 square miles up to the fifth parallel of north latitude and carrying a population of 2,927,494. Entebbe is the British headquarters. Cotton, cotton-seed, and cattle are main exports. Imports 1914-15, £580,331; exports, £537,363; revenue, £282,831; expenditure, £289,213. Reigning king, Daudi Chua; British governor and commander-in-chief, Sir F. J. Jackson.

**UNEMPLOYMENT.** The year 1916 differed very sharply from the year 1914 and the early part of 1915 in the almost complete absence of any serious problem of unemployment, not only in the United States but in belligerent nations. This was not due only to the high level of industrial effort (see FINANCIAL REVIEW), but in Europe was primarily due to the drafting of millions of men into the armies. There was in fact nearly everywhere a dearth of labor in mechanical pursuits and an unprecedented tendency for women to enter into unwonted occupations (see WOMEN IN INDUSTRY). Legislation in the United States was consequently limited to minor regulations of employment exchanges and investigations of unemployment in Maryland by the Labor Department, and in Massachusetts by the Social Insurance Commission (see SOCIAL INSURANCE). Agitation, however, was continued by the American Association for Labor Legislation (q.v.) in behalf of unemployment insurance as a fundamental feature of a programme of social insurance.

**UNITED STATES.** The legislation in this country was limited. Virginia reenacted a law of 1910 regulating private employment agencies with various changes. The law requires every employment agency to keep a register showing the age, sex, nativity, occupation, name, and address of all applicants; and also a register of the name and address of applicants for help and the nature of employment. Registration fees are limited to \$3; and such fee must be re-

turned in full unless employment is secured within 30 days. In Maryland the State Board of Labor and Statistics was authorized to establish free employment agencies in such parts of the State as seemed advisable. In New York a Bureau of Farm Settlement was created in the Department of Agriculture. In New Jersey, where the Department of Labor was reorganized, the Bureau of Employment was given control of the public employment offices. In California the Legislature endorsed the recommendation of the United States Department of Labor that financial aid be given to unemployed persons taking up homes on the public domain.

The prosperous condition of labor in the United States was shown by statistics in the *Monthly Review* of the United States Bureau of Labor Statistics for September. These statistics were based on a rather extensive survey of the number of working people employed in July, 1916, as compared with July, 1915. While cotton manufacturing showed a decline of 1 per cent and cigar manufacturing of 4.9 per cent, other industries showed the following percentage increases: iron and steel, 27; car building and repairing, 17; hosiery and underwear, 8; woolen, 10; silk, 13.7; men's ready-made clothing, 8.6; and boots and shoes, 23.4. These figures are indicative of the increased demand for labor and the almost complete elimination of unemployment as a serious economic evil. In consequence of these prosperous conditions movements of social workers for the establishment of protection against periods of employment had only a slight effect.

**GREAT BRITAIN.** The *Labour Gazette* showed that the percentage of unemployed workers in British trade unions had steadily declined from 2.5 for January, 1915, to 0.7 in January, 1916, and to considerably less than 0.5 after June, 1916. Thus, trade unions with nearly 1,000,000 members reported 0.4 per cent members unemployed Sept. 30, 1916, a similar percentage Aug. 31, 1916, and 0.9 per cent Sept. 30, 1915. Coal mining, pig iron production, iron, and steel were conspicuous for the increase in the number of workers, while the cotton trade, ready-made clothing, printing and bookbinding, brick and cement production, and food preparation showed considerable declines in the number of workers, some of these actually suffering from a dearth of labor.

**GERMANY.** As in other belligerent countries, labor reports showed that the high state of industrial activity produced by the war had reduced unemployment to a minimum. The metal, engineering, electrical, and chemical trades all showed considerable increases in numbers employed; while certain branches of the clothing trades and the building trades showed declines. Trade union returns covering 806,000 members showed that at the end of August, 1916, the greatest amount of unemployment existed among textile workers, hatmakers, bookbinders, leather workers, and porcelain workers. On the other hand, metal workers, brewery workers, and state and municipal employees showed negligible percentages of unemployed members.

**UNEMPLOYMENT INSURANCE IN GREAT BRITAIN.** The unusual labor conditions created by the war resulted in numerous modifications in the activities of the employment exchange and in important modifications in the scope of unemployment insurance. Under amendments o:

July, 1916, temporary insurance against unemployment was extended to the following additional groups of workmen: men engaged on or in connection with munitions works, as officially defined, with minor exceptions; and all work people engaged in the manufacture of ammunition, fireworks, explosives, chemicals, oils, lubricants, soap, candles, paints, colors, varnish, metals, metal goods, rubber, rubber goods, leather, leather goods, brick, cement, and artificial stone, and saw milling and machine wood work. Such extension is temporary only and will continue not longer than three years from the end of the war nor more than five years from Sept. 4, 1916, whichever period is longer. Any workman with his employer's consent, if engaged in an establishment where some workmen are insured under the new regulations, may be included. Any deficit in the insurance funds will be met by the government.

**UNIFLOW ENGINE.** See STEAM ENGINE.

**UNION COLLEGE.** A non-sectarian institution for the education of men at Schenectady, N. Y., founded in 1795. In the autumn of 1916 there were 548 students and 43 faculty members. Productive funds amounting to \$1,196,802 yielded an income of \$57,509. The total obtained from tuition fees was \$82,119. In the library were 42,000 volumes. President, Charles Alexander Richmond. Under the title Union University the college has associated with it a law school, medical college, Dudley Observatory, and a school of pharmacy in Albany. Dr. Richmond is chancellor of the university.

**UNITARIANS.** According to the official year book for 1916-17 there were on July 1, 1916, 487 churches and 517 ministers in the United States and Canada. No statistics of membership are published, and in this respect the latest available figures were for 1906, when the membership numbered 70,542 in the United States and Canada. The American Unitarian Association, whose headquarters are in Boston, is the governing body of the denomination. Its work is carried on under the departments of publication, religious education, social and public service, publicity, New Americans, and church extension. The denomination is active in the dissemination of its distinctive literature, both by books and tracts, as well as in the defense and propagation of its principles by its periodicals. In 1916 8876 volumes were sold, and every minute, day and night, a Unitarian tract went into some one's hands, a total of 544,875 for the year, 1490 a day, 62 an hour. The department of religious education published the new Beacon Course, the church school edition of the new hymn book, and an Easter service for schools. The department of social and public service reported that 65 churches in 1916 appointed committees to carry on sociological work. Also a very successful four weeks' institute of social service was held in the Meadville School by this department. The department of publicity employed an expert on church efficiency during seven months of the year with excellent results. With his aid, in cooperation with ministers and local members of churches, increased financial results and deepened interest in the work were attained. Under the department of New Americans 19 missionaries went among English and foreign-speaking peoples, including Swedes, Norwegians, Icelanders, Finns, Italians, in 35 stations and missions, preaching

and ministering. In 1916 the membership of the Laborers' Friendly Society in the Japan mission reached 30,000. In 1916 a countrywide evangelistic campaign was carried on in 100 communities, principally in large cities, with 700 meetings, and an aggregate attendance of 50,000. The report of the treasurer of the American Unitarian Association showed that for the year ending April 29, 1916, the income was \$203,629, and the expenditures \$191,672. The denomination has divinity schools at Cambridge, Mass., Meadville, Pa., and Berkeley, Cal. The periodicals are *The Christian Register* and *The Beacon*, published at Boston; *The Unitarian Advance* and *Unity*, published at Chicago; *The Pacific Unitarian*, published at San Francisco; and *Unitarian Word and Work*, a monthly devoted to the practical activities of the denomination. The president of the American Unitarian Association is Rev. Samuel A. Eliot; secretary, Rev. Lewis G. Wilson.

**UNITED BRETHREN.** See MORAVIANS.

**UNITED BRETHREN IN CHRIST.** This denomination, whose theology is practically the same as that of the Methodists, had its spiritual beginning in 1768, as a result of the evangelistic work of Philip William Otterbein, a missionary to the German Reformed Church, who came to America in 1752. The church was not formally organized until 1800. In 1917 the one hundred and fiftieth anniversary of the spiritual birthday of the church was to be celebrated. The church is governed by a general conference elected every four years, and composed of ministerial and lay delegates elected in equal proportions. According to the official statistics for 1916 the Church of the United Brethren in Christ had in that year: churches, 3630, an increase of 73 over 1915; ministers, 1988, an increase of 64; members, 348,585, an increase of 6740 over 1915; Young People's Societies, 1844, an increase of 57; membership of Young People's Societies, 77,645; Junior and Intermediate Christian Endeavor Societies, 746, with a membership of 28,321, an increase of 2011 over 1915; Sunday schools, 3522, an increase of 61 over 1915; Sunday school teachers and officers, 43,843; total Sunday school enrollment, 454,275, an increase of 8296 over 1915. The total church contributions for all purposes in 1916 were \$3,433,180, an increase of \$330,369 over 1915. The value of the church houses in 1916 was \$13,206,561; of the parsonages, \$2,307,904. The leading educational institutions are: Otterbein University, Bonebrake Theological Seminary, Philomath College, Lebanon Valley College, Indiana Central University, Kansas City University, and Lander Clark College. The denominational organ is *The Watchword*, of which Rev. H. F. Shupe, Dayton, Ohio, is the editor.

**UNITED EVANGELICAL CHURCH.** See EVANGELICAL ASSOCIATION.

**UNITED KINGDOM.** The United Kingdom of Great Britain and Ireland is treated in this book under the heading GREAT BRITAIN.

**UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.** The origin of this denomination dates from 1853, and was due to a union of associate and associate reformed churches. According to the official statement made by the principal clerk of the general assembly there were in 1916, 13 synods, 75 presbyteries, 1143 ministers, 1143 congregations, 156,954 members in America, 43,925 foreign

members, 200,879 total members, 1420 Sunday schools, 178,469 Sunday school scholars, with contributions amounting to \$238,651, and 1048 young people's societies with a membership of 36,514. The total contributions of the church in 1916 amounted to \$3,006,598. Missions are maintained in India, Egypt, and the Sudan. For several years attempts have been made to effect a union of this denomination with the Presbyterian Church in the United States.

**UNITED STATES. POPULATION.** The estimated population of continental United States on July 1, 1916, was 102,017,312. The population on April, 15, 1910, the year in which the census was taken, was 91,972,206. The total population, including outlying territories, in 1916 amounted to 112,444,620. In 1910 it was 101,748,269. The population of the several States and territorial possessions will be found in the articles dealing with them.

**AGRICULTURE.** The general statistics of 1916 for agriculture in the United States and its dependencies will be found in the articles dealing with agriculture and agricultural products. In the section on agriculture in each State article is given the acreage, value, and production of the principal crops in 1916. See also articles on territorial possessions and **UNITED STATES DEPARTMENT OF AGRICULTURE.**

**MANUFACTURES.** In each of the States are given the results of the census for manufactures taken in 1914. Additional information will be found in articles dealing with chief industries, as **COTTON, TEXTILE MANUFACTURING, STOCK RAISING AND MEAT PRODUCTION, etc.**

**MINERAL PRODUCTION.** The production of all metals and minerals in 1916 will be found given in the general article **MINERAL PRODUCTION.** Under each State in which mineral production is important will also be found a section dealing with that subject.

**EDUCATION.** For information relating to educational matters see articles **EDUCATION IN THE UNITED STATES AND UNIVERSITIES AND COLLEGES.** In the articles on each State and Territory will be found a paragraph dealing with educational statistics.

**RELIGION.** For information relating to various denominations see the articles on these denominations. General information relating to religious bodies in 1916 will be found in the article **RELIGIOUS DENOMINATIONS AND MOVEMENTS.**

**FOREIGN COMMERCE.** The tables below dealing with foreign commerce in the fiscal and calendar years summarize the amount of exports and imports during these periods by countries, and by grand divisions. This information will be found in tables I, II, and III. In tables IV and V will be found a classification of the imports and exports in the fiscal year by commodities. The reference to these tables shows that the total imports into the United States in 1916 amounted to \$2,197,883,510, compared with a total of \$1,674,169,740 in 1915 and \$1,893,925,657 in 1914. Thus it will be seen that the imports in 1916 far surpassed the amount of those of 1914, the last fiscal year which was not effected by the European war. As will be seen, there was a slight decrease in 1915 as compared with 1914, due to conditions prevailing in the latter year. When exports are considered a still larger increase is noted. The total exports for the fiscal year 1916 amounted to \$4,333,658,865,

compared with \$2,768,589,340 in 1915, and \$2,364,579,148 in 1914. In examining the table of imports and exports by grand divisions, however, the effects of the war on foreign commerce will at once be noted. Imports from Europe declined from \$895,602,868 in 1914 to \$616,252,749 in 1916. Figures for 1915 and 1916 are practically the same. From North America there was an increase from \$427,399,354 in 1914 to \$591,895,543 in 1916. From South America there was an increase from \$222,677,075 in 1914 to \$391,562,018 in 1916. From Asia and Oceania there was an increase from \$329,096,884 in 1914 to \$533,407,455 in 1916. In the exports to European countries we find the value greatly increased in 1916. It rose from \$1,486,498,729 in 1914 to \$2,999,183,429 in 1916. Exports to all the grand divisions show large increases in 1916. To Asia and Oceania the United States exported goods valued at \$377,711,783 in 1916, compared with \$196,994,033 in 1914. As we now examine the figures relating to the countries at war we will note the effect on commerce for the United States. From Austria-Hungary in 1914 we imported goods valued at \$20,110,834. This had fallen in 1916 to \$1,431,570. From Belgium the value of goods imported in 1914 was \$41,035,532. This had fallen off in 1916 to \$1,478,579. From France the value of goods imported in 1914 was \$141,446,252, and in 1916 \$102,077,620. From Germany there were imported in 1914 goods valued at \$189,919,136. In 1916 this had fallen to \$13,945,743. Italy was less effected by the war. The value of imports was a trifle larger in 1916 than in 1914. Russia, too, increased the value of her exports to the United States. Trade with the United Kingdom was considerably larger in 1916 than in 1914. Figures for the former year are \$308,443,223, and for the latter \$293,661,304.

When we examine the table of exports we find the figures even more significant. The United States exported to Austria-Hungary in 1914 goods valued at \$22,718,258. This value had fallen in 1916 to \$152,929. To Belgium the value of exports in 1914 was \$61,219,894, and in 1916, \$21,844,638. The value of exports to France made a prodigious increase. In 1914 they were valued at \$159,818,924, and in 1916 at \$630,672,604. To Germany, however, exports fell off in value from \$344,794,276 in 1914 to \$288,851 in 1916. Exports to Italy were greatly increased, as they were to practically all the neutral countries. Exports to Russia increased over sixfold. To the United Kingdom the United States sent goods in 1916 valued at \$1,518,046,263, compared with a value in 1914 of \$594,271,863. By examining the table on the chief articles of export in 1916 it will be noted that the exports of iron and steel and their manufactures were valued at \$621,209,453 in 1916, compared with \$225,861,387 in 1915. The value of these exports in 1914 was \$251,480,677. In these items are included the guns and other products of iron and steel employed in the war. In addition to this there were exported cartridges valued at \$37,083,488, dynamite valued at \$3,893,675, and gunpowder valued at \$173,736,374. In 1914 the export of these articles was comparatively small.

**GOLD EXPORTS AND IMPORTS.** The imports of gold for the calendar year 1916 amounted to \$685,990,234. Of this amount \$579,337,169

came from Canada, \$57,131,027 from England. 927. Of this amount \$37,597,178 went to South America. The exports of gold from the United States in America, \$28,659,250 to Cuba, and \$26,131,826 the calendar year 1916 amounted to \$155,792,- to Japan.

TABLE I  
IMPORTS AND EXPORTS BY COUNTRIES—FISCAL YEARS 1914, 1915, AND 1916

Twelve months ending June—

Countries	Imports			Exports		
	1914	1915	1916	1914	1915	1916
<b>EUROPE</b>						
Austria-Hungary . . . . .	\$20,110,884	\$9,794,418	\$1,431,570	\$22,718,258	\$1,288,669	\$152,929

**ARMY.** The authorized enlisted strength of the army, in accordance with the act of June 3, 1916, is as follows: Infantry, 38 regiments, 51,224; cavalry, 17 regiments, 17,357; field artillery, 9 regiments, 7881; engineers, 3 regiments and 1 mounted company, 2198; coast artillery corps, 21,423; staff corps and departments, 19,224; Philippine scouts, 5733; miscellaneous organization and special allowances, 13,857; or a total of 138,897. The actual strength of the army on June 30, 1916, was 107,641, which includes 102,616 enlisted men, and 5025 officers. Efforts were made during the year to increase the army to its authorized strength, but it had fallen considerably short of this at the end of the year.

For various phases of the army's activity, see **MEXICO; MILITARY PROGRESS; MILITIA; UNITED STATES MILITARY ACADEMY.**

As regards legislation the year 1916 was one of the most important in the history of the military establishment.

In the last week of March the House of Representatives by a vote of 402 to 2 passed the bill for reorganizing and enlarging the army. This was known as the Hay bill. Several amendments to the bill were rejected. Among these was one prepared by Representative Kahn of California, making an enlarged army of 120,000 instead of 140,000. In the voting on the bill party lines were not regarded. On the amendment just noted above 44 Republicans voted against it and 33 for it. By the amendment to the bill the term of enlistment in the army was shortened. Provision was made that after one year of honorable efficient service an enlisted man might be furloughed to the regular army reserve for six years. In the original bill the term was three years and four years in the reserve. A new provision was added authorizing the President to call out this reserve without the consent of Congress if necessary. By another amendment authority was given for detaching officers of the regular army as instructors at any school or college where a company of more than 100 students is maintained. Conditions were that the student should have three hours a week training for two years, and

five hours a week for the succeeding two years. After graduation his service in the army continued for six months. He would then be placed in the officers' reserve, bound to respond to a call within ten years. It was estimated that an officers' reserve of 50,000 men would be created.

In the summer of 1915, 3383 men attended military training camps; in 1916, 16,134, distributed as follows: Plattsburg, N. Y. (five camps), 12,198; Fort Oglethorpe, Ga. (two camps), 556; Fort Sam Houston, Texas, 421; Monterey, Cal., 1090; Fort Douglas, Utah, 578; American Lake, Wash., 125; Fort Terry, N. Y. (for boys of 15-18), 1166. Congress in 1916 established the legal status of these camps under the control of the United States army and provided \$2,000,000 for their use. Transportation, subsistence, and uniforms are to be furnished the "rookies" by the government. Senior Camps are for men from 18 to 45 (and 45 to 55, on special permission), Junior Camps for boys from 15 to 18. The Military Training Camps Association (19 West 44th Street, New York) and other similar civilian organizations expected an attendance of 50,000 in 1917. In August-September 2500 men were taken on United States war vessels for the first Naval Training Cruise in the Atlantic.

An army reorganization bill known as the Chamberlain bill passed the Senate on April 6th without a roll call. Scarcely a dozen Senators opposed its passage. In the final form the bill differed widely from the Hay bill dealing with the same subject as passed by the House. The Senate bill provided for a regular army of 250,000 men; for a Federal volunteer army, similar to the continental army plan of Secretary Garrison of 261,000 volunteers; for military instruction in schools and colleges; for making the term of enlistment in the five-year period, two years with the colors and three years in the reserve. The most significant provisions of the bill were added at the last moment, under a stress of the knowledge that the President was about to address Congress on the submarine controversy with Germany. These provisions deal with the increase of the army to 250,000 men, and the training of school boys for military service. The House and Senate bill then went into conference. The chief point of difference between the House and the Senate conferees in considering the army bill was in relation to the size of the regular army. The House conferees also refused to concur in the provisions of the Senate bill for a Federal volunteer reserve army. When the bill finally emerged from the conference an agreement had been made on a maximum force of 160,000 men with a possible maximum of 175,000. In May the bill passed the Senate without a roll call, and the House by a vote of 349 to 25. For an outline of the measure, see **MILITARY PROGRESS.**

The House military committee on June 14th ordered a favorable report on the army appropriation bill, carrying \$157,123,099. In addition to providing for regular army increases, federalization of the national guard, and civilian training camps, authorized by the new army reorganization bill, the measure created an executive council for mobilization of the forces for national defense. The bill passed the House on June 26th without the formality of a roll call. It then went to the Senate. On July 3rd, Senator Chamberlain introduced an army ap

propriation bill carrying appropriations amounting to \$328,000,000 for the fiscal year. The bill was finally passed slightly reducing the amount. The Senate struck out the provision of the House bill providing for a military council, and added an amendment providing for a council of national defense for the coordination of industries and resources to be composed of the secretaries of state, war, and navy, chief of staff of the army, an officer of the navy, not below the rank of captain, and six persons to be appointed by the President. The Senate also restored the age limit to 21 years instead of 18, as had been provided by the army reorganization bill. There was incorporated in the bill the revised articles of war, which had in several measures passed both houses.

On June 26th the House had passed a bill for expenditures of the army. The original bill called for \$153,000,000, but the mobilization of the national guard and other expenses made it necessary to make additional appropriations. The Senate Military Committee added more than \$60,000,000 to the estimate presented to the House, and the War Department requested a special appropriation of \$15,000,000 for aviation. The Hay resolution, which would have had the effect of drafting the national guardsmen into the regular army, passed the Senate on June 6th, by a vote of 40 to 30. A provision inserted in the House for the relief of guardsmen's families was struck out, but national guardsmen with dependent families were allowed to obtain honorable discharge from the service. This amendment was rejected by the House, and was taken into a joint conference. As a result of this, both the proposed appropriation for guardsmen's families and the exemption of members from the guard who had others dependent upon them for support were struck out. Mr. Hay introduced a separate measure appropriating \$2,000,000 for the relief of dependent families of guardsmen called into service, and this was passed in both houses. The appropriation bill as finally agreed upon by both houses was vetoed by President Wilson on August 18th, because a rider had been attached by Representative Hay exempting army officers of the retired list from army discipline and liability to trial by court-martial. Military authorities opposed this exemption, urging that it would be destructive of all discipline since the retired officers are expected to serve in time of war. The bill was at once reintroduced and the objectionable addition was stricken out. It was passed and was signed by President Wilson. On December 7th, Maj.-Gen. Hugh L. Scott, in his annual report issued on that date, made a strong plea for universal military training. He declared that the training period of 75 days in three years provided by the army reorganization bill was entirely inadequate. He declared that in his opinion a year of intensive training was required to make a soldier. He gave statistics in which he showed that in 11 States with 16,600 enrolled guardsmen at the time of call more than 10 per cent failed to respond and 29 per cent of the remainder could not pass the physical test. He showed in his report that an aggregate force of 151,096 officers and men of the guard were mustered into the Federal service, and about 110,957 were on the border a month and a half after the call was issued. On Aug. 31, 1916, the regular army

was 29,130 short of its authorized strength, and between March 15th and August 1st, only 8463 additional men were enlisted.

Hearings were begun before the Senate on military affairs on December 18th in regard to a compulsory military training bill prepared by Senator Chamberlain. Before this committee General Scott declared that 3,000,000 fully equipped troops should be available within 90 days after the outbreak of any war involving the United States.

**NAVY.** The naval appropriation bill for the fiscal year 1917, which was approved on Aug. 29, 1916, makes the largest appropriation in the history of the United States navy. In addition to this, for the first time the policy of a continuous programme for new construction was adopted. For details, see article **NAVAL PROGRESS.** Prior to the passage of the appropriation act there had been legislation providing for the utmost facilities at the Naval Academy for the education and training of officers of the navy. In addition to the permanent force provision was made for the first time for an adequate naval reserve force which might be utilized in time of national need. A government armor plant was provided for, as was also a government projectile plant, and a large appropriation was made available for increasing the ship-building facilities of the navy yards. There was also authorized a great navy experimental laboratory where, with the advice and assistance of civilian scientists and engineers, experimental and development work of the utmost importance was to be carried out.

During the fiscal year 1916 there were added to the active fleet in commission four battleships, of a type as powerful as any possessed by any other naval power. These vessels were the *Oklahoma*, *Nevada*, *Pennsylvania*, and *Arizona*. In addition there were added to the fleet during the year nine destroyers, eight submarines, and a submarine tender. There were under construction five battleships, eight destroyers, and a large number of submarines. The fleet took part during the year in service in Haiti and the Dominican Republic. (See *Foreign Relations*.) It was also represented at the inauguration of the Emperor of Japan.

The annual strategic maneuvers of the fleet took place in August in the north Atlantic. In these maneuvers 83 vessels were engaged, of which 28 were battleships, and 13 submarines. The operations of the maneuvers lasted for four days, and developed most interesting and instructive situations. On July 15th, the U. S. S. *Hector* was wrecked off the coast of South Carolina, and on August 29th the battleship *Memphis*, the flagship of the commander of the cruiser force, lying off the city of Santo Domingo, was driven ashore by heavy seas without previous warning. Forty lives were lost in this wreck, 33 from the swamping of the ship's boat caught in the effort to return to the ship, and 7 killed and 15 injured by the bursting of a steam pipe in the engineering room. For aviation see **AERONAUTICS.**

**POST OFFICE.** The receipts for the Post Office Department for the fiscal year ending June, 1916, amounted to \$312,057,688, an increase of \$24,809,523 over the fiscal year 1916. The expenditures were \$306,204,033, an increase over the preceding year of \$7,658,006. A surplus of \$5,216,243 was turned into the treasury.

During the year it was necessary to suspend the parcel post between the United States and Austria-Hungary, Germany, and the Netherlands on account of the lack of necessary transportation facilities due to the war. At the end of the year the service therefore was not in operation in these countries. Notwithstanding these interruptions the weight of the parcel post mails dispatched from the United States to foreign countries shows an increase of 77 per cent over the mails dispatched in 1915. The growth and development of domestic parcel post business was consistent during the year.

From March 4, 1914, to April 1, 1916, the rural mail service was extended to 658,571 families, or approximately 3,000,000 patrons, most of whom were formerly remote from any postal facilities.

The continued growth of the postal savings system affords convincing evidence of the utility of this branch of the postal service. During the fiscal year 1916 there was a gain of 77,523 in the number of depositors, and \$20,235,177 in deposits. On June 30, 1916, there were approximately 603,000 depositors with \$86,019,885 to their credit.

**PENSIONS.** There were paid out for pensions during the fiscal year 1916 \$159,155,089. The total pensioners on the roll on June 30, 1916, were 709,572, compared with 748,147 on the same day in 1915. The Civil War soldiers on June 30, 1916, numbered 362,277, compared with 396,370 in 1915. There were 34,252 deaths among the Civil War soldiers in 1916. There were in 1916 115 surviving widows of soldiers of the War of 1812 drawing pensions. There were 513 survivors of the War of Mexico drawing pensions. The number of the pensioners of the war with Spain was 28,472. On April 27, 1916, there was approved a medal of honor roll, each person on this roll receiving an additional pension of \$10 per month for life.

**PATENTS.** The total number of applications received for patents in 1916 was 70,303, compared with 69,349 in 1915. The total number of applications awaiting action was 16,569, a decrease of 1711. The total number of patents granted in 1916 was 46,133.

**BUREAU OF MINES.** During the year this bureau trained more than 4800 miners in mine rescue and first aid. It sent mining engineers and trained rescue crews to the scene of 89 mine accidents throughout the United States. Studies to prevent diseases arising from work in mines were conducted in Montana, Missouri, and other States. For other scientific activities of the government see SMITHSONIAN INSTITUTION. See also METALLURGY.

**DIPLOMATIC SERVICE.** American ambassadors in the warring countries continued to perform

the duties entrusted to them as representatives of belligerent governments. The burden fell especially hard upon Ambassador Gerard, in Berlin, and Ambassador Sharp in Paris. Ambassador Page in London was also engaged in many important negotiations during the year. One of the important changes was the appointment of David R. Francis of St. Louis to Russia to replace George T. Marve, of California, who resigned on account of ill health. The American ambassador to Russia had charge of German, Austro-Hungarian, and Turkish interests in that country. On February 25th, the Senate confirmed the nomination of Henry P. Fletcher as ambassador to Mexico, but he did not take up the duties of this position during the year on account of conditions prevailing in that country. Joseph H. Shea of Indiana was appointed ambassador to Chile. Abram F. Elkus was appointed ambassador to Turkey, to succeed Henry Morgenthau, who resigned to taken an active part in the political campaign in behalf of President Wilson. Henry Van Dyke resigned as minister to the Netherlands in December, and J. W. Garrett of Maryland was appointed to succeed him. On July 13th the State Department announced transfers to new posts of 41 American consuls in Europe, the changes being required in some instances because of conditions brought about by the war. Viscount Chinda was recalled to Japan and Aimaro Sato was appointed his successor. Dr. V. K. Wellington Koo, Chinese minister, resigned his position on December 28th, on a plea of ill health, but the resignation was not accepted. The Austrian ambassador in charge of subordinate officers during the year, Ambassador Dumba, was recalled in 1915, but did not formally resign his post until Nov. 4, 1916. Announcement was made on November 10th, that Count Adam Tarnowski von Tarnow had been appointed Austrian ambassador to succeed Dr. Dumba. He had seen previous service in Washington, as secretary of the Austrian ambassador from 1899 to 1901. The Government of Great Britain refused to grant safe conduct to Count Tarnowski on the ground that even though international law sanctions the granting of such safe conduct, the Austrian and German ambassadors to neutral countries had so far exceeded their legitimate functions that it was impossible to accede to such a request. The United States government finally prevailed in securing reconsideration of this decision, and Count Tarnowski was permitted to take passage for the United States.

The following table gives the list of American representatives to foreign countries and foreign representatives to the United States in 1916:

**CABINET.** The second split in the cabinet of President Wilson came on Feb. 10, 1916, when Secretary of War Lindley M. Garrison presented his resignation to the President. This action came as a result of the differences of opinion in regard to the proposed bills for the increase of the army. Early in 1915 President Wilson had requested Mr. Garrison to prepare a plan for reducing the military deficiencies of the country. For many months the Secretary concentrated his efforts upon this problem, and finally evolved a scheme which in the autumn of 1915 was accepted by President Wilson and made a part of the official administration programme. In his annual message to Congress delivered on Dec. 7, 1915, the President warmly commended this plan and recommended its enactment by Congress. Mr. Garrison's programme included, first, a considerable enlargement of the regular army, and, second, the formation of a reserve body of about 400,000 men to be known as the continental army, and to be made up for the most part of men taking a brief but thorough training to number about 33,000 each year.

The committee on military affairs of the House of Representatives had in the meantime prepared a bill, the distinctive feature of which was an increase in the number of the national guard, and the payment of these bodies out of the national treasury. President Wilson having delivered his message to Congress, found among the members of the committee in the House little support for the plans formulated by Secretary Garrison. Mr. Kitchin, the floor leader of the Democrats, was openly opposed to preparedness in any comprehensive form, and Mr. Hay, chairman of the military committee, was entirely out of sympathy with the plans of the administration and its programmes.

In order to arouse interest among the people, and especially in the Middle West, President Wilson in the latter part of January and the first days of February made a tour of the Middle West. He was absent from Washington a week, and made 20 speeches, 10 of which were of a formal nature. He spoke at Pittsburgh, Cleveland, Chicago, Milwaukee, Des Moines,

Kansas City, and St. Louis. On his return he conferred freely with members of Congress and allowed it to become known that he was no longer committed to any particular plan and was entirely open to conviction. On February 9th, five days after the President's return from his speech tour, Secretary Garrison wrote him a letter, the most important parts of which are as follows:

*My Dear Mr. President:*

Two matters within the jurisdiction of this department are now of immediate and pressing importance, and I am constrained to declare my position definitely and unmistakably thereon. I refer, of course, to the Philippine question and the matter of national defense.

You know my convictions with respect to each of them. I consider the principle embodied in the Clarke amendment an abandonment of the duty of this nation and a breach of trust toward the Filipinos; so believing, I cannot accept it or acquiesce in its acceptance.

I consider the reliance upon the militia for national defense an unjustifiable imperiling of the nation's safety. It would not only be a sham in itself, but its enactment into law would prevent, if not destroy, the opportunity to procure measures of real, genuine national defense. I could not accept it or acquiesce in its acceptance. I am obliged to make my position known immediately upon each of these questions—in a speech on Thursday afternoon upon the national defense question and in a communication to the House committee having charge of the Philippine question. If, with respect to either matter, we are not in agreement upon these fundamental principles, then I could not, with propriety, remain your seeming representative in respect thereto. Our convictions would be manifestly not only divergent, but utterly irreconcilable.

You will appreciate the necessity of timely knowledge upon my part of the determination reached by you with respect to each of these matters, so that I may act advisedly in the premises.

Sincerely yours,  
LINDLEY M. GARRISON.

The President replied to this letter with these phrases:

"I am not yet convinced . . . I feel in duty bound to keep my mind open to conviction on that side (the national guard argument). I should deem it a very serious mistake to shut the door against this attempt on the part of the committee with perfect good faith to meet the essentials of the programme set forth in my message but in a way of their own choosing . . . This is a time when it seems to me

patience on the part of all of us is essential . . ." To this letter Mr. Garrison replied, tendering his resignation. He said: "It is evident that we hopelessly disagree upon what I conceive to be fundamental principles. This makes manifest the impropriety of my longer remaining your seeming representative with respect to these matters." The resignation was promptly accepted, as was that of Assistant Secretary of War Henry Breckinridge of Kentucky, who sent in his resignation on the same day in which Mr. Garrison's was received. Mr. Breckinridge was in sympathy with the policies of his chief and expressed himself as unable to serve further in the light of the latter's resignation. Mr. Garrison was succeeded by Newton Diehl Baker of Ohio, March 8, 1916.

There were no other changes in the cabinet of the President during the year.

**SUPREME COURT.** The nomination of Louis D. Brandeis (q.v.) of Boston as Associate Justice of the Supreme Court, made by President Wilson early in February, 1916, to fill the vacancy caused by the death of Justice Joseph R. Lamar (q.v.) was unexpected and was the subject of much comment and not a little opposition, both in Congress and outside, owing chiefly to the prominence of Mr. Brandeis in recent years as an advocate of advanced social legislation, as counsel for working men and women in contests over legislation relating to working hours and wages, as counsel in the Ballinger Conservation episode, and in proceedings before the Interstate Commerce Commission relating to railroad rates. He had also acted as adviser in legislation against trusts. Mr. Brandeis is a leader in the Zionist movement and was the first Jew to be named for the Supreme Court.

Prolonged hearings were held by the judiciary committee of the Senate, and much evidence in relation to Mr. Brandeis's various activities was heard. Several months elapsed before a vote was taken in the Senate, but he was finally confirmed on June 1st by a vote of 47 to 22.

The resignation of Justice Hughes made it necessary to appoint a successor, and on July 14th the President nominated John Hessin Clarke (q.v.), of Cleveland, Ohio. The nomination was confirmed by the Senate on July 24th, and Justice Clarke entered upon the duties of his office on October 9th. The Supreme Court was composed during the year of Edward Douglass White of Louisiana, Chief Justice; Associate Justices, Joseph McKenna of Pennsylvania, O. W. Holmes of Massachusetts, William R. Day of Ohio, Willis Van Devanter of Indiana, Mahlon Pitney of New Jersey, James C. McReynolds of Tennessee, Louis D. Brandeis of Massachusetts, and John Hessin Clarke of Ohio.

**CONGRESS.** *Sixty-fourth Congress.* Congress reassembled after the holiday session on January 4th. On the same day the banking and currency committee reported favorably the rural credits bill. On January 6th, the Senate adopted a resolution calling upon the President for information relating to the stability of the present government in Mexico, and for documents forming the record of the relations of the United States with Mexico within recent years. The committee on sutrage on January 8th favorably reported an amendment to the Constitution providing equal suffrage. On January 12th there was a sharp debate in the Senate on the murder of 19 Ameri-

can mining officials in Mexico. (See MEXICO.) A tariff commission bill was introduced in the House on February 1st. This provided for a non-partisan board of five members to investigate and report on tariff matters. The House on February 2nd adopted the so-called Keating child labor bill prohibiting interstate shipments of the products of child labor. On the same day the House passed the first two of the national defense bills, prepared by the administration. One of these increases the corps of cadets at the Naval Academy by 531, while the other made appropriations for enlarging the facilities for the construction of battleships at the Mare Island and New York navy yards. These measures were passed in the Senate on February 9th. On February 4th the army reorganization bill was introduced in the Senate. (See section *Army*.) Both branches of Congress assembled in joint session on April 19th to listen to an address by President Wilson in regard to the warfare carried on by Germany against vessels of commerce by the use of submarines. (See UNITED STATES AND THE WAR.) On May 1st, the House by a vote of 213 to 165 rejected a bill previously passed in the Senate fixing a definite date for the withdrawal from the Philippine Islands, and substituting the so-called Jones bill, which affirmed the intention of the United States to withdraw from the islands as soon as a stable government could be established. (See PHILIPPINES.) The Senate on May 4th passed the rural credits bill, by a vote of 68 to 5. On May 13th this bill was passed by the House. The Senate on May 8th passed the good roads bill, authorizing the expenditure of \$85,000,000 for over a period of five years. The House committee on naval affairs on May 18th rejected the five-year naval programme, but recommended the construction of five battle cruisers. On May 20th the House passed the administration shipping bill by a strictly party vote. The conference report on the army reorganization bill was adopted by a vote of 349 to 25. On May 24th the Senate committee on judiciary favorably reported the nomination of Louis D. Brandeis to the Supreme Court, after a consideration of four months. The nomination was confirmed by the Senate on June 1st. On June 2nd the House passed the naval appropriation bill carrying approximately \$270,000,000. On July 22nd the naval appropriation bill passed the Senate, carrying the largest amount for such a bill in the history of the country. (See section *Navy*.) The Senate on July 27th passed the army appropriation bill, carrying \$314,000,000, or nearly double the sum authorized in the House bill. On July 29th the Senate by a vote of 46 to 19 adopted a resolution expressing the hope that the British government would exercise clemency in the treatment of Irish prisoners. (See GREAT BRITAIN.) - The Senate on August 8th, after a debate lasting for several days, passed the child labor law, which had already been passed in the House. (See CHILD LABOR.) The House adopted on August 9th the conference report on the army appropriation bill, and on August 15th the House accepted the programme passed by the Senate providing for great increases in naval construction. The Senate on August 16th approved the conference report on the Philippine bill, by drafting the Clarke amendment promising independence in four years. The Demo-

TWO JUSTICES OF THE UNITED STATES SUPREME COURT APPOINTED IN 1916

cratic members of the finance committee of the Senate on August 17th reported the new revenue bill asked for by the administration. There was asked for in addition to this bill an appropriation of \$130,000,000 to meet the extraordinary expenses due to the Mexican situation. The Senate on August 18th by a vote of 38 to 21 passed the shipping bill, "for the purpose of encouraging, developing, and creating a naval auxiliary, a naval reserve, and a merchant marine." The President on August 18th vetoed the army appropriation bill, objecting to the provision for exempting retired officers from military trial and discipline. This bill was re-passed by both houses with the objectionable provision eliminated, and was signed by the President. On August 19th the Senate passed the workmen's compensation bill providing for allowances, in case of disability, to over 500,000 government employees. In the Senate on August 22nd began the general debate on the emergency revenue bill. Both branches of Congress assembled in the House, and were addressed by the President in regard to the threatened railroad strike. On August 3rd Representative Adamson, chairman of the House committee on interstate commerce, introduced an eight-hour bill, which was acceptable to the President, and to the representatives of the four railroad brotherhoods. This bill was passed by the House on September 1st, by a vote of 239 to 56. Seventy Republicans voted with the Democratic majority, while two Democrats voted against the measure. On September 2nd, the Senate passed without amendment the eight-hour bill by a vote of 43 to 28. Two Democrats voted against the measure, and one Republican for it. Both branches of Congress on September 4th agreed to the conference report on the workmen's compensation bill. The Senate on September 5th by a vote of 43 to 16 passed the emergency revenue bill, designed to raise \$205,000,000 annually in special taxes. Five Republicans voted with the Democrats for this measure. On September 7th both branches adopted the conference report on the special revenue bill, dropping, however, the most drastic of the amendments, which empowered the President to retaliate against belligerent countries which interfere with American rights. On the same day the Senate ratified the treaty with Denmark, providing for the purchase of the Danish West Indies.

The Sixty-fourth Congress adjourned on September 8th. The appropriations made exceeded those of any preceding Congress. For current appropriations and for future expenses the total was \$1,858,384,485. This is over \$750,000,000 more than the total of the last fiscal year. By far the largest item of increase was the large sums appropriated for the reorganization of the army and navy. The Mexican crisis also called for unusual expenditures to provide for the mobilization of the national guard on the American border.

Among the more important measures passed by this Congress were those granting a basic eight-hour day with no reductions of pay to employees of railroads engaged in interstate commerce; the shipping bill appropriation, \$50,000,000, for the purchase and operation of ships by the government; the child labor bill, prohibiting interstate trade in the products of factories where children, under specified age or for long hours,

are employed; the emergency revenue law increasing the Federal income tax and levying a Federal inheritance tax and a profit tax on the munitions of war. A large appropriation was also made for local improvements, especially for the construction of highways. Among the important treaties ratified during the year were those with Nicaragua, providing for the acquisition of a canal route by the United States, and giving that government also naval station rights in the Gulf of Fonseca; the treaty for the purchase of the Danish West Indies; and the treaty providing for the American National Protectorate over the Republic of Haiti.

A striking feature of the revenue resolution was the effort to strengthen the government against foreign interference with American trade and industry. Tariff increases were authorized to meet the "dumping" of foreign goods after the war, which is anticipated. Tariff was increased on dyestuffs, and a tariff commission was created. A provision was added to the revenue bill giving the President power to withhold clearance from vessels of governments which discriminated against any American citizen or firm. This was designed as a reprisal for the black-listing of American firms by the British government.

The short session of the Sixty-fourth Congress convened on December 4th. President Wilson in his address on December 5th to the Congress renewed his recommendation for legislation to prevent a nation-wide railway strike, or lock-out, before there might be opportunity for investigation. He also recommended the passage of a bill providing for the government of Porto Rico, and a corrupt practices bill. The main portion of the address was devoted to the railway question. He reviewed the six proposals made to Congress near the end of the previous session, which related to the railroads of the country, their regulation, and the settlement of disputes over the hours and wages of the employees. Three of these proposals had been already acted upon. Two of these provided for the eight-hour day and created a commission to study its effect in actual operation. The other gave the Interstate Commerce Commission the power to determine the limit of wages. This left three of the proposals to be acted upon. One of these enlarged and reorganized the Interstate Commerce Commission, another authorized the President to take control of the railroad lines, and their equipment for military purposes in case of need. The most important of the recommendations provided for the settlement of disputes over wages and hours of labor arising between the managers and employees of railroads which are engaged in interstate commerce. For further discussion of these questions, see RAILROADS. There were three new members in the Senate: James E. Watson, of Indiana, Republican, elected to fill the vacancy caused by the death of Senator Shively (q.v.), temporarily filled by Thomas Taggart, Democrat; Bert M. Fernald, of Maine, who succeeded Senator E. C. Burleigh (q.v.), deceased; and William F. Kirby, Democrat, of Arkansas, who succeeded Senator J. P. Clark (q.v.), deceased. The election of Senator Watson reduced the Democratic majority in the Senate from 16 to 14. The membership was composed of 55 Democrats and 41 Republicans. Senator Saulsbury of Delaware was chosen president pro tempore and majority

leader, a position which had been filled until his death by Senator Clarke. In the House three new members took seats: Thomas W. Harrison, Democrat, succeeded James Hay of Virginia; Henry C. Woodyard, Republican, of West Virginia, succeeded Representative Moss, deceased; and Henry S. Benedict, Progressive, of California, succeeded Representative Stephens, who resigned to become Lieutenant-Governor of the State. There was a brief consideration in the Senate of the corrupt practices bill, and of proposed amendments, and on December 18th a subcommittee was appointed to redraft the measure and report to the Senate not later than Jan. 3, 1917. Congress adjourned on December 22nd for the Christmas holidays, to reassemble on Jan. 2, 1917.

The membership of the Sixty-fourth Congress is given below:

[Democrats in roman; Republicans in *italics*; Progressives in SMALL CAPS; Progressive Republican in *italics* with \*; Independent in CAPS; Prohibitionist in roman with \*; Socialist in black letter; Progressive-Protectionist in CAPS with \*; Progressive-Democrat in SMALL CAPS with \*.]

ALABAMA.—SENATORS: John H. Bankhead, Oscar W. Underwood. REPRESENTATIVES (Democrats, 10): At large, John W. Abercrombie, Oscar L. Gray, S. Hubert Dent, Jr., Henry B. Steagall, Fred L. Blackmon, J. Thomas Heflin, William B. Oliver, John L. Burnett, Edward B. Almon, George Huddleston.

ARIZONA.—SENATORS: Henry F. Ashurst, Marcus A. Smith. REPRESENTATIVE (Democrat, 1): At large, Carl Hayden.

ARKANSAS.—SENATORS: Joseph T. Robinson, William F. Kirby. REPRESENTATIVES (Democrats, 7): Thaddeus H. Caraway, William A. Oldfield, John N. Tillman, Otis Wingo, Henderson M. Jacoway, Samuel M. Taylor, William S. Goodwin.

CALIFORNIA.—SENATORS: John D. Works, James D. Phelan. REPRESENTATIVES (Democrats, 8; Republicans, 4; Progressives, 2; Independent, 1; Prohibitionist, 1): WILLIAM KENT, John E. Raker, *Charles F. Curry, Julius Kahn, JOHN I. NOLAN, JOHN A. ELSTON, Denver S. Church, Everis A. Hayes, Charles H. Randall,\* H. Stanley Benedict, William Kettner.*

COLORADO.—SENATORS: Charles S. Thomas, John F. Shafroth. REPRESENTATIVES (Democrats, 8; Republican, 1): Benjamin C. Hilliard, *Charles B. Timberlake, Edward Keating, Edward T. Taylor.*

CONNECTICUT.—SENATORS: *Frank B. Brandegee, George P. McLean.* REPRESENTATIVES (Republicans, 5): *P. Davis Oakley, Richard P. Freeman, John Q. Tison, Ebenezer J. Hill, James P. Glynn.*

DELAWARE.—SENATORS: *Henry A. du Pont, Willard Saulsbury.* REPRESENTATIVE (Republican, 1): At large, *Thomas W. Miller.*

FLORIDA.—SENATORS: Duncan U. Fletcher, Nathan P. Bryan. REPRESENTATIVES (Democrats, 4): Stephen M. Sparkman, Frank Clark, Emmett Wilson, William J. Sears.

GEORGIA.—SENATORS: Hoke Smith, Thomas W. Hardwick. REPRESENTATIVES (Democrats, 12): Charles G. Edwards, Frank Park, Charles E. Crisp, William C. Adamson, William S. Howard, James W. Wise, Gordon Lee, Samuel J. Tribble, Thomas M. Bell, Carl Vinson, J. Randall Walker, Dudley M. Hughes.

IDAHO.—SENATORS: *William E. Borah, James H. Brady.* REPRESENTATIVES (Republicans, 2): At large, *Robert M. McCracken, Addison T. Smith.*

ILLINOIS.—SENATORS: Jas. Hamilton Lewis, *Lawrence Y. Sherman.* REPRESENTATIVES (Democrats, 10; Republicans, 16; Progressive Republican, 1): At large, *Burnett M. Chipperfield, Wm. Elza Williams; Martin B. Madden, James R. Mann, William W. Wilson, James T. McDermott, Adolph J. Sabath, James McAndrews, Frank Buchanan, Thomas Gallagher, Fred A. Brütten, George E. Foss, Ira C. Copley,\* Charles E. Fuller, John O. McKenzie, Clyde H. Tavener, Edward J. King, Claudius U. Stone, John A. Sterling, Joseph G. Cannon, William B. McKinley, Henry T. Rainey, Loren E. Wheeler, William A. Rodenberg, Martin D. Foster, Thomas S. Williams, Edward E. Denton.*

INDIANA.—SENATORS: John W. Kern, *James E. Watson.* REPRESENTATIVES (Democrats, 11; Republicans, 2): Charles Lieb, William A. Cullop, William E. Cox, Lincoln Dixon, Ralph W. Moss, Finly H. Gray, *Merrill Moores, John A. M. Adair, Martin A. Morrison, William E. Wood, George W. Rauch, Cyrus Cline, Henry A. Barnhart.*

IOWA.—SENATORS: *Albert B. Cummins, William S.*

*Kenyon.* REPRESENTATIVES (Democrat, 1; Republicans, 10): *Charles A. Kennedy, Harry B. Hull, Burton B. Sweet, Gilbert N. Haugen, James W. Good, C. William Ramseyer, Cassius C. Dowell, Horace M. Towner, William K. Green, Frank P. Woods, T. J. Steele.*

KANSAS.—SENATORS: William H. Thompson, *Charles Curtis.* REPRESENTATIVES (Democrats, 6; Republicans, 2): *Daniel E. Anthony, Jr., Joseph Taggart, Philip P. Campbell, Dudley Doolittle, Guy T. Haverling, John R. Connely, Jonett Shouse, William A. Ayres.*

KENTUCKY.—SENATORS: Ollie M. James, J. O. W. Beckham. REPRESENTATIVES (Democrats, 9; Republicans, 2): Alben W. Barkley, David H. Kincheloe, Robert Y. Thomas, Jr., Ben Johnson, Swager Sherley, Arthur B. Rouse, J. Campbell Cantrill, Harvey Helm, William J. Fields, *John W. Langley, Caleb Powers.*

LOUISIANA.—SENATORS: Joseph E. Ransdell, Robert F. Broussard. REPRESENTATIVES (Democrats, 7; Progressive-Protectionist, 1): Albert Estopinal, H. Garland Dupré, WHITMELL P. MARTIN,\* John T. Watkins, Riley J. Wilson, Lewis L. Morgan, Ladislav Lazaro, James B. Aswell.

MAINE.—SENATORS: Charles F. Johnson, *Bert M. Fernald.* REPRESENTATIVES (Democrat, 1; Republicans, 3): *Asher C. Hinds, Daniel J. McGillicuddy, John A. Peters, Frank E. Guernsey.*

MARYLAND.—SENATORS: John Walter Smith, Blair Lee. REPRESENTATIVES (Democrats, 5; Republican, 1): Jesse D. Price, J. Fred C. Talbot, Charles P. Coady, J. Charles Linticum, *Sydney E. Mudd, David J. Lewis.*

MASSACHUSETTS.—SENATORS: *Henry Cabot Lodge, John W. Weeks.* REPRESENTATIVES (Democrats, 4; Republicans, 12): *Allen T. Treadway, Frederick H. Gillett, Calvin D. Paigo, Samuel E. Winslow, John Jacob Rogers, Augustus P. Gardner, Michael F. Phelan, Frederick W. Dallinger, Ernest W. Roberts, Peter F. Tague, George Holden Tenham, James A. Gallivan, William H. Carter, Richard Olney, 2nd, William S. Greene, Joseph Walsh.*

MICHIGAN.—SENATORS: *William Alden Smith, Charles E. Townsend.* REPRESENTATIVES (Democrats, 2; Republicans, 11): Frank E. Doremus, Samuel W. Beakes, J. M. C. Smith, *Edward L. Hamilton, Carl E. Mapes, Patrick H. Kelley, Louis C. Cramton, Joseph W. Fordney, James C. McLaughlin, George A. Loud, Frank D. Scott, W. Frank James, Charles A. Nichols.*

MINNESOTA.—SENATORS: *Knute Nelson, Moses E. Olapp.* REPRESENTATIVES (Democrat, 1; Republicans, 8; Progressive, 1): *Sydney Anderson, Franklin F. Ellsworth, Charles E. Davis, Carl C. Van Dyke, George E. Smith, Charles A. Lindbergh, Andrew J. Volstead, Clarence B. Miller, Halvor Steenserson, THOMAS D. SCHALL.*

MISSISSIPPI.—SENATORS: John Sharp Williams, James K. Vardaman. REPRESENTATIVES (Democrats, 8): Ezekiel S. Candler, Jr., Hubert D. Stephens, Benjamin G. Humphreys, Thomas U. Sisson, William W. Venable, Pat Harrison, Percy E. Quin, James W. Collier.

MISSOURI.—SENATORS: William J. Stone, James A. Reed. REPRESENTATIVES (Democrats, 14; Republicans, 2): James T. Lloyd, William W. Hucker, Joshua W. Alexander, Charles F. Booher, William P. Borland, Clement C. Dickinson, Courtney W. Hamlin, Dorsey W. Shackelford, Champ Clark, *Jacob E. Meeker, William L. Igoe, Leonidas C. Dyer, Walter L. Hensley, Joseph J. Russell, Perl D. Decker, Thomas L. Rubey.*

MONTANA.—SENATORS: Henry L. Myers, Thomas J. Walsh. REPRESENTATIVES (Democrats, 2): At large, John M. Evans, Tom Stout.

NEBRASKA.—SENATORS: Gilbert M. Hitchcock, *George W. Norris.* REPRESENTATIVES (Democrats, 8; Republicans, 8): *O. F. Reavis, Charles O. Lobeck, Dan V. Stephens, Charles H. Sloan, Ashton C. Shallenberger, Moses P. Kinkaid.*

NEVADA.—SENATORS: Francis G. Newlands, Key Pittman. REPRESENTATIVE (Republican, 1): At large, *E. E. Roberts.*

NEW HAMPSHIRE.—SENATORS: *Jacob H. Gallinger, Henry F. Hollis.* REPRESENTATIVES (Republicans, 2): *Cyrus A. Sulloway, Edward H. Wason.*

NEW JERSEY.—SENATORS: James E. Martine, William Hughes. REPRESENTATIVES (Democrats, 4; Republicans, 8): *William J. Browning, Isaac Beachers, Thomas J. Scully, Elijah C. Hutchinson, John H. Coptstick, Archibald O. Hart, Dow H. Drucker, Edward W. Gray, Richard Wayne Parker, Frederick E. Leshbach, John J. Egan, James A. Hamill.*

NEW MEXICO.—SENATORS: *Thomas B. Catron, Albert B. Fall.* REPRESENTATIVE (Republican, 1): At large, *Benigno O. Hernandez.*

NEW YORK.—SENATORS: James A. O'Gorman, *James W. Wadsworth, Jr.* REPRESENTATIVES (Democrats, 18; Republicans, 24; Socialist, 1): *Frederick C. Hicks, Charles P. Caldwell, Joseph V. Flynn, Harry H. Dale, James P. Maher, Frederick W. Rows, John J. Fitzgerald, Daniel J. Griffin, Oscar Wm. Sulfit, Beulah L. Haskell, Daniel J. Riordan, Meyer London, George W.*

**FOUR UNITED STATES SENATORS PROMINENT IN 1916**

Loft, Michael F. Farley, Michael F. Conry, Peter J. Dooling, John F. Carew, Thomas G. Patton, Walter M. Chandler, Isaac Siegel, Murray Hulbert, Henry Bruckner, William S. Bennet, Woodson R. Oglesby, James W. Husted, Edmund Platt, Charles B. Ward, Rollin B. Sanford, James S. Parker, William B. Charles, Bertrand H. Snell, Luther W. Mott, Homer P. Snyder, George W. Fairchild, Walter W. Magee, Norman J. Gould, Harry H. Pratt, Thomas B. Dunn, Henry G. Danforth, S. Wallace Dempsey, Charles B. Smith, Daniel A. Driscoll, Charles M. Hamilton.

**NORTH CAROLINA.**—SENATORS: F. M. Simmons, Lee S. Overman. REPRESENTATIVES (Democrats, 9; Republican, 1): John H. Small, Claude Kitchin, George E. Hood, Edward W. Pou, Charles M. Stedman, Hannibal L. Godwin, Robert N. Page, Robert L. Doughton, Edwin Y. Webb, James J. Britt.

**NORTH DAKOTA.**—SENATORS: Porter J. McCumber, Asie J. Gronna. REPRESENTATIVES (Republicans, 3): Henry T. Helgesen, George M. Young, Patrick D. Norton.

**OHIO.**—SENATORS: Atlee Pomeroy, Warren G. Harding. REPRESENTATIVES (Democrats, 9; Republicans, 18): Nicholas Longworth, Alfred G. Allen, Warren Gard, J. Edward Russell, Nelson E. Mathews, Charles O. Keams, Simon D. Fass, John A. Kay, Isaac E. Sherwood, Robert M. Switzer, Edwin D. Rickette, Clement Brumbaugh, Arthur W. Overmyer, Seward E. Williams, William C. Mooney, Roscoe C. McCulloch, William A. Ashbrook, David A. Hollmerworth, John G. Cooper, William Gordon, Robert Crosser, Henry I. Emerson.

**OKLAHOMA.**—SENATORS: Thomas P. Gore, Robert L. Owen. REPRESENTATIVES (Democrats, 7; Republican, 1): James S. Davenport, William W. Hastings, Charles D. Carter, William H. Murray, Joseph B. Thompson, Scott Ferris, James V. McClintic, Dick T. Morgan.

**OREGON.**—SENATORS: George E. Chamberlain, Harry Lane. REPRESENTATIVES (Republicans, 8): Willis O. Hawley, Nicholas J. Sinnott, O. N. McArthur.

**PENNSYLVANIA.**—SENATORS: Boies Penrose, George T. Oliver. REPRESENTATIVES (Democrats, 6; Republicans, 30): At large, Thomas S. Orago, Mahlon M. Garland, Daniel F. Lufsan, John E. K. Scott, William S. Vane, George S. Graham, J. Hampton Moore, George W. Edmonds, Peter E. Costello, George P. Darrow, Thomas S. Butler, Henry W. Watson, William W. Griset, John R. Farr, John J. Casey, Robert D. Heaton, Arthur G. Dewalt, Louis T. McPadden, Edgar R. Kees, John V. Lesher, Benjamin K. Focht, Aaron S. Kreider, Warren W. Bailey, C. William Beales, Charles H. Rowland, Abraham L. Keister, Robert F. Hopwood, Henry W. Temple, Michael Liebel, Jr., Henry J. Steele, S. Taylor North, Samuel H. Miller, Stephen G. Porter, William H. Coleman, John M. Morin, Andrew J. Barschfeld.

**RHODE ISLAND.**—SENATORS: Henry F. Lippitt, LeBaron B. Colt. REPRESENTATIVES (Democrat, 1; Republicans, 2): George F. O'Shaunessy, Walter E. Sitness, Ambrose Kennedy.

**SOUTH CAROLINA.**—SENATORS: Benjamin R. Tillman, Ellison D. Smith. REPRESENTATIVES (Democrats, 7): Richard S. Whaley, James F. Byrnes, Wyatt Aiken, Samuel J. Nicholls, David E. Finley, J. Willard Ragdale, Asbury F. Lever.

**SOUTH DAKOTA.**—SENATORS: Thomas Sterling, Edwin S. Johnson. REPRESENTATIVES (Democrat, 1; Republicans, 2): Charles H. Dillon, Royal O. Johnson, Harry L. Gandy.

**TENNESSEE.**—SENATORS: Luke Lea, John K. Shields. REPRESENTATIVES (Democrats, 8; Republicans, 2): Sam E. Sells, Richard W. Austin, John A. Moon, Cordell Hull, William O. Houston, Joseph W. Byrns, Lemuel P. Padgett, Thetus W. Sims, Finis J. Garrett, Kenneth D. McKellar.

**TEXAS.**—SENATORS: Charles A. Culberson, Morris Sheppard. REPRESENTATIVES (Democrats, 18): At large, Jeff. McLemore, James H. Davis; Eugene Black, Martin Dies, James Young, Sam Rayburn, Hatton W. Sumners, Rufus Hardy, Alexander W. Gregg, Joe H. Eagle, George F. Burgess, James P. Buchanan, Robert L. Henry, Oscar Callaway, John H. Stephens, James L. Slayden, John N. Garner, William E. Smith.

**UTAH.**—SENATORS: Reed Smoot, George Sutherland. REPRESENTATIVES (Republican, 1; Progressive Democrat, 1): Joseph Howell, JAMES H. MAYS.\*

**VERMONT.**—SENATORS: William P. Dillingham, Carroll S. Page. REPRESENTATIVES (Republicans, 2): Frank L. Greene, Porter H. Dale.

**VIRGINIA.**—SENATORS: Thomas S. Martin, Claude A. Swanson. REPRESENTATIVES (Democrats, 9; Republican, 1): William A. Jones, Edward E. Holland, Andrew J. Montague, Walter A. Watson, Edward W. Saunders, Carter Glass, T. W. Harrison, Charles C. Carlin, C. Bascom Slemm, Henry D. Flood.

**WASHINGTON.**—SENATORS: Wesley L. Jones, Miles Poindexter. REPRESENTATIVES (Democrat, 1; Republicans, 4): William E. Humphrey, Lindley H. Y. B. 16—24.

Hadley, Albert Johnson, William L. La Follette, O. O. Dill.

**WEST VIRGINIA.**—SENATORS: William E. Chilton, Nathan Goff. REPRESENTATIVES (Democrats, 2; Republicans, 4): At large, Howard Sutherland; M. M. Neely, George M. Bowers, Adam B. Littlepage, Harry C. Woodyard, Edward Cooper.

**WISCONSIN.**—SENATORS: Robert M. La Follette, Paul O. Husting. REPRESENTATIVES (Democrats, 3; Republicans, 8): Henry A. Cooper, Michael E. Burke, John M. Nelson, William J. Cary, William H. Stafford, Michael K. Reilly, John J. Esch, Edward E. Browne, Thomas F. Konop, James A. Frear, Irvin L. Lenroot.

**WYOMING.**—SENATORS: Clarence D. Clark, Francis E. Warren. REPRESENTATIVE (Republican, 1): At large, Frank W. Mondell.

**ALASKA.**—James Wickersham (Delegate).  
**HAWAII.**—J. Kuhiu Kalaniana'ole (Delegate).

**PHILIPPINES.**—Manuel L. Quezon, Manuel Earnshaw (Resident Commissioners).

**PORTO RICO.**—(Resident Commissioner: vacancy.)

CLASSIFICATION

SENATE	HOUSE
Democrats . . . . . 55	Democrats . . . . . 227
Republicans . . . . . 41	Republicans . . . . . 199
	Progressives . . . . . 8
Total . . . . . 96	Progressive Republican 1
	Independent . . . . . 1
	Socialist . . . . . 1
	Prohibitionist . . . . . 1
	Prog.-Protectionist . . . 1
	Prog.-Democrat . . . . . 1
	Total . . . . . 435

*Sixty-fifth Congress.* Revised figures as to the result of the election in the House of Representatives show that it will be composed of 214 Republicans, 213 Democrats, 2 Independents, 2 Progressives, 1 Prohibitionist, 1 Socialist, with 2 seats contested. Thus members of independent parties will have the controlling vote of the House. Contests in which certificates have not been issued were in the 32nd Pennsylvania district, and the 3rd New Jersey district. The Senate, as a result of the November elections, remains Democratic, with a majority of 12 instead of 14 as in the Sixty-fourth Congress. Republican Senators succeeded Democrats in California, Indiana (2), Maryland, New Jersey, New York, and West Virginia. Democrats succeeded Republicans in Delaware, New Mexico, Rhode Island, Utah, and Wyoming. The following is a list of the members of the Senate as it will be constituted in the Sixty-fifth Congress:

- Alabama.—John H. Bankhead and Oscar W. Underwood.
- Arizona.—Henry F. Ashurst and Marcus A. Smith.
- Arkansas.—Joseph T. Robinson and William F. Kirby.
- California.—James D. Phelan and Hiram W. Johnson.
- Colorado.—Charles S. Thomas and John F. Shafroth.
- Connecticut.—Frank B. Brandegee and George P. McLean.
- Delaware.—Willard Saulsbury and J. O. Wolcott.
- Florida.—Duncan U. Fletcher and Park Trammell.
- Georgia.—Hoke Smith and Thomas W. Hardwick.
- Idaho.—William E. Borah and James H. Brady.
- Illinois.—J. Hamilton Lewis and Lawrence Y. Sherman.
- Indiana.—James E. Watson and Harry S. New.
- Iowa.—Albert B. Cummins and William S. Kenyon.
- Kansas.—William H. Thompson and Charles Curtis.
- Kentucky.—Ollie M. James and J. C. W. Beckham.
- Louisiana.—Joseph E. Ransdell and Robert F. Brunsard.
- Maine.—Bert M. Fernald and Frederick Hale.
- Maryland.—John Walter Smith and J. I. France.
- Massachusetts.—Henry Cabot Lodge and John W. Weeks.
- Michigan.—William Alden Smith and Charles E. Townsend.
- Minnesota.—Knute Nelson and Frank B. Kellogg.
- Mississippi.—John Sharp Williams and James K. Vardaman.
- Missouri.—William J. Stone and James A. Reed.
- Montana.—Henry L. Myers and Thomas J. Walsh.
- Nebraska.—Gilbert M. Hitchcock and George W. Norris.

Nevada.—Francis G. Newlands and Key Pittman.  
 New Hampshire.—Jacob H. Gallinger and Henry F. Hollis.  
 New Jersey.—William Hughes and Joseph S. Frelinghuysen.  
 New Mexico.—Albert B. Fall and A. A. Jones.  
 New York.—James W. Wadsworth, Jr., and William M. Calder.  
 North Carolina.—F. M. Simmons and Lee S. Overman.  
 North Dakota.—Porter J. McCumber and Asa J. Gronna.  
 Ohio.—Atlee Pomerene and Warren G. Harding.  
 Oklahoma.—Thomas P. Gore and Robert L. Owen.  
 Oregon.—George E. Chamberlain and Harry Lane.  
 Pennsylvania.—Boies Penrose and Philander C. Knox.  
 Rhode Island.—LeBaron B. Colt and Peter Goelet Gerry.  
 South Carolina.—Benjamin R. Tillman and Ellison D. Smith.  
 South Dakota.—Thomas Sterling and Edwin S. Johnson.  
 Tennessee.—John K. Shields and Kenneth D. McKellar.  
 Texas.—Charles A. Culberson and Morris Sheppard.  
 Utah.—Reed Smoot and William H. King.  
 Vermont.—William P. Dillingham and Carroll S. Page.  
 Virginia.—Thomas S. Martin and Claude A. Swanson.  
 Washington.—Wesley L. Jones and Miles Poindexter.  
 West Virginia.—Nathan Goff and Howard Sutherland.  
 Wisconsin.—Robert M. La Follette and Paul O. Husting.  
 Wyoming.—Francis E. Warren and John B. Kendrick.

**ADMINISTRATION.** The history of the administration in its larger aspect is told in articles dealing with domestic and foreign relations of the United States and the presidential campaign. (See MEXICO, UNITED STATES AND THE WAR, and the sections in this article *Congress, Presidential Campaign*, etc.) In this section there will be treated only such phases of the administration as do not properly come under other heads.

President Wilson began on January 27th, in New York City, a series of public addresses relating chiefly to plans for national defense. These speeches were delivered in a measure on account of the defense programme in Congress, where action had been delayed and plans for new taxes, to raise money for defense purposes, had encountered strong opposition. In his first address delivered before the Railroad Business Men's Association in New York, he declared that the question of national defense had been clouded by passion and prejudice. He said that partisan feeling should be excluded and that in dealing with the question all parties should be drawn together. He said that while the passion of the people was for peace and he had sought to maintain peace, against very great and sometimes very unfair odds, the American people would fight for the vindication of their life and character, for liberty, and their free institutions. He declared that America must maintain her sovereignty, and that she had become the champion of free government throughout the western hemisphere. As to methods, he had in mind the development of a system of industrial and vocational education, under Federal guidance, to which could be added training in the use of arms, camp sanitation, and military discipline, to make men serviceable for national defense. Such a system, he said, could not be made in a short time. Training should be given to a sufficient body of citizens without delay. While he admired and respected the national guard, it had the disadvantage of being under the control of the States, and the President could command it only in the case of actual invasion. There should be, he said, a citizens' reserve of at least

500,000 trained men, to be available in case of necessity.

Two days after his New York speech the President spoke in Pittsburgh, where he again advocated the reserve of 500,000 men. In an address made in Cleveland he said that the administration had not found it easy to avoid entanglements. Here he urged the development of coast defenses, enlargement of the navy, and again the supplementing of the army by a trained reserve. He said with great emphasis: "Let me tell you very solemnly that you cannot afford to postpone this thing. I do not know what a single day may bring forth."

In the speech delivered in Chicago the President touched upon the Monroe Doctrine. He said: "We are not asking ourselves 'Shall we be prepared to defend our own shores, and our own homes?' Is that all we stand for? To keep the doors securely shut against enemies? What about the great principles that we have stood for—for liberty of government, and national independence in the whole Western Hemisphere?"

At St. Louis he specified what some of the belligerents "might feel constrained to do." He said: "One reckless commander of a submarine, choosing to put his private interpretation upon what his government wishes him to do, might set the world on fire." He declared that the United States might have to fight to save American lives, but that it ought never to fight to avenge lives already taken, nor should it fight simply to save property.

The three arguments advanced by the President in this series of speeches were, first, the maintenance of the honor of the United States; second, the maintenance of the Monroe Doctrine; third, readiness in case the nation was forced into war. The President returned to Washington on February 4th, after having made 10 speeches in public halls and having made short addresses from the platform of his train. His reception for the most part was enthusiastic. In addition to the cities already mentioned, he spoke in Milwaukee, Des Moines, Topeka, Kansas City, and other cities.

**TREATIES.** A number of important treaties were concluded during the year. These were chiefly with South and Central American countries.

In January President Wilson through Secretary Lansing laid before the Latin-American ambassadors and ministers, to be submitted to their governments, the plan of a general treaty or series of treaties in which the United States and all the other nations of the hemisphere should agree to guarantee the territorial integrity of the several countries; to maintain the republican form of government; to submit to settlement by diplomacy, arbitration, or investigating commissions, disputes of all kinds, boundary disagreements included, but excepting controversies affecting national independence; to prohibit exports of arms to any but the legally constituted governments, and to enact neutrality laws that would prevent filibustering expeditions from starting or carrying on revolutions in neighboring republics.

Treaties with Colombia and Nicaragua, which had been awaiting action by the Senate for two years, received favorable reports by the Senate committee on foreign relations early in February. By the terms of the treaty with Colombia

FOUR UNITED STATES REPRESENTATIVES PROMINENT IN 1918

the United States is to pay \$25,000,000, with an expression of regret that anything had occurred to disturb the relations between the two countries. Before the favorable report was ordered the sum to be paid was reduced to \$15,000,000 and expression of regret was made a mutual one in the following words:

"The Government of the United States and the Republic of Colombia in their own names, and in the names of their respective peoples, wishing to have put an end to controversies and differences between them, arising out of the events from which the present situation on the Isthmus of Panama resulted, express sincere regret that anything should have occurred to interrupt or to mar the relations of cordial friendship that had so long subsisted between the two governments."

The treaty with Nicaragua provided that the United States should pay \$3,000,000, receiving in return the exclusive right to make a canal on the Nicaragua route, three small islands, and a naval base on the Gulf of Fonseca.

The Senate on February 18th, by a vote of 55 to 18, ratified the treaty with Nicaragua. Among other provisions this treaty gives the United States "the unencumbered exclusive right, necessary and convenient, to the construction, operation, and maintenance of an inter-oceanic canal by way of the San Juan River and the Great Lake of Nicaragua or by way of any other route over Nicaraguan territory," together with the 99 year lease holding, which may be renewed, of Great Corn Island, and Little Corn Island, in the Caribbean Sea, east of the Nicaraguan coast, and a naval base on the Gulf of Fonseca to be selected by the United States. For this Nicaragua is to be paid the compensation of \$3,000,000 to be spent under the supervision of the United States in payment of the debts of that country, or for other public use. The United States government is to choose the banks where the money is to be deposited, and disbursements are to be made only with the approval of the Secretary of State or his appointee. In order to meet the objections of Costa Rica, Salvador, and Honduras to various provisions of the treaty, the ratification resolution contained a proviso expressly declaring that nothing in the treaty was "to affect any existing right" of the three states.

The Senate on February 28th ratified a treaty with Haiti. By the terms of this treaty the United States formally assumes responsibility for the maintenance of the financial integrity and civil order of the Republic of Haiti, and will exercise over the western third of the island practically the same oversight as had been exercised during the past eight years over the Dominican Republic, which comprises the remainder of the territory of the island. The treaty was modified in certain points in order not to offend the pride of the Haitian people. It calls for cooperation rather than dictation on the part of the United States government. The United States also voluntarily withdrew the demand for Mole St. Nicholas as a naval station. The republic is to be policed by a native constabulary. This will first be under American officers, but these are to be replaced by native officers as soon as they are qualified. An American financial adviser will control the collection of the revenue and its expenditure and prevent the republic from incurring further debt.

All customs duties on exports and imports are to be collected by a general receiver, nominated by the President of the United States and appointed by the President of Haiti. There will also be a financial adviser, who shall devise an adequate system of public accounting, aid the increasing of revenues, inquire into the validity of the debts of Haiti, and take other action in association with the Minister of Finance for the republic's welfare and prosperity. The debts of the republic are to be classified showing the sinking fund required for a final discharge of them. The sums thus raised are to be used first for the payment of the salaries and expenses of the general receiver and the financial adviser and their assistants; second, for the interest and sinking fund of the public debt; third, for the maintenance of the constabulary; and fourth, for the current expenses of the government. The government of Haiti agrees not to increase its present debt without the consent of the President of the United States, or to contract any debt unless surplus revenue is sufficient to pay interest and provide a sinking fund. Haiti also agrees that she will not without the consent of the President of the United States modify the customs duties in such a manner that the revenue will be reduced. Haiti agrees also not to surrender any part of her territory by sale or lease to any foreign power, and not to make any treaties with any power that shall impair her independence. All foreign claims against Haiti are to be settled by arbitration under the agreement by the United States. Sanitary improvements are to be made under the direction of an engineer nominated by the President of the United States. In case of possible intervention the United States pledges itself to lend sufficient aid for the preservation of Haitian independence and the maintenance of a government adequate for the protection of life, property, and individual liberty. The term of the agreement is to be 10 years, but 10 years more may be added "if for specific reasons presented by either high contracting party the purpose of this treaty has not been fully achieved."

An arbitration treaty between the United States and Honduras similar to those negotiated by former Secretary Bryan with many countries, was signed on July 27th at the State Department at Washington. This was the 31st of these treaties to be consummated.

FOREIGN RELATIONS. The most important issues of the United States with foreign countries are discussed elsewhere in this volume, especially in the articles on MEXICO and UNITED STATES AND THE WAR. A number of treaties were ratified during the year, and these will be found discussed in the section *Treaties*. Aside from Mexico and the belligerents in Europe there were few incidents of importance in the relations of the United States with other countries. An exception to this statement was the purchase of the Danish West Indies for \$25,000,000. A strike of native agricultural laborers in these islands in the early part of the year directed the attention of the Danish government to a possible sale of them to the United States. This project had been considered in previous years, but nothing material had been developed. Negotiations between the two countries were taken up and were practically completed on July 23rd. On August 4th a treaty was signed by Secretary

Lansing and the Danish minister, by the terms of which the United States would obtain from Denmark full possession of the islands of St. Thomas, St. John, and St. Croix on the payment of \$25,000,000. The object of obtaining these islands was primarily the establishing of a coaling and cable station at St. Thomas. The Danish lower house of Parliament voted in favor of the selling of the islands, if a vote of the people favored the sale. The upper house on August 15th appointed a committee of 15 members to consider the matter of the sale. On August 24th a resolution was passed by this body to the effect that the question should be settled by general election. On September 5th a report from the Foreign Relations Committee of the Senate recommended the purchase of the islands, and this was ratified on the following day. An amendment to reduce the purchase price to \$10,000,000 was defeated. On December 14th a plebiscite on the question of the sale of these islands to the United States resulted in 283,000 votes being cast in favor of the sale, and 157,000 against such action. The lower house of the Danish Parliament on December 20th adopted the bill ratifying the treaty. The upper house on the following day adopted the bill and on December 22nd it was ratified by the King. This practically completed the negotiations and made the islands the property of the United States. There remained only the formalities for the completion of the transaction. The United States had relations of various sorts with the Central and South American countries. Early in March a section of the Liberal party of Panama made a formal request to President Wilson for the supervision of the Panama presidential election in July by the United States, and this the government undertook to do.

The United States marines participated in an attempt to restore order and preserve peace in the republics of Haiti and Santo Domingo. Troubles in Haiti which began in 1915 were so quieted that it was found possible to withdraw a large part of the force in May, and to transfer it to the Dominican Republic, where a revolution had broken out. This force remained in Santo Domingo for the remainder of the year. Owing to conditions resulting in the interior it was necessary in June to send a column to Santiago and other towns in that vicinity. Somewhat serious resistance on the part of the revolutionists was made at several points. The strongest opposition was encountered at Las Trechernas, a strongly fortified place. The action lasted about three-quarters of an hour, and infantry and machine guns participated. The infantry captured the first line of the trenches at the point of the bayonet, and the revolutionists retired to the second line, out of which they were easily driven. In this engagement one private was killed and four others wounded. The American forces continued to advance through the country, and their progress was marked by frequent skirmishes and resulted in a favorable engagement at Bona Antonio Alta, in which one private was killed. On June 30th, communication was cut with Monte Cristi, and the expeditionary forces moved out as a flying column until communication could be established with Puerto Plata by rail. On July 3rd there was another encounter at the town of Guayacanas. A non-commissioned officer was badly injured. With the arrival of reinforcements the revolu-

tionist fire was held in check and the infantry charged and occupied the trenches. Military operations continued to be carried on until a peace agreement was arrived at between the provisional government and the leader of the revolution. Further trouble ensued, however, and on October 24th there was another engagement between American troops and rebel forces. This resulted from an attempt of the American committee to arrest Vitasta, leader of the revolutionists. Fighting continued for a considerable time, but the rebels eventually were defeated. The engagement occurred opposite Santo Domingo city. In November, under instructions from Washington based upon the reports of conditions in the republic, martial law was established by the American naval and marine force. It was explained that it became necessary to proclaim martial law and set up a military government in Santo Domingo to enable the Dominican government to pay the interest on its foreign debt, in accordance with the treaty of 1907 between the United States and the Dominican Republic, under which the customs receipts of that country were to be collected by an American receiver-general of customs, and disbursed in accordance with the terms of the agreement. The reports from the American commander, Captain Knapp, showed that on account of the political situation the revenues collected by the American receiver-general tied up there could not be disbursed. Under the proclamation Captain Knapp became military governor of the island. There was some opposition to the American administration but no actual hostilities had broken out at the end of the year. There were no relations of moment with Oriental countries. On August 3rd a proposed loan by American bankers to China failed on account of differences of opinion in regard to guarantee. The State Department announced on September 14th that both Japan and Russia had given assurances that the new Russo-Japanese convention was in no wise designed to modify the "open door" in China.

**PRESIDENTIAL CAMPAIGN.** The annals of the political history of the country contain the record of no more remarkable political campaign than that which resulted in the reelection of Woodrow Wilson to the presidency. While there was lacking the tumult and bitterness of the campaign of 1912, the campaign of 1916 had its dramatic moments, and culminated in a climax which has no parallel in the history of American politics.

The Republican party had for its great problem the defeat of President Wilson, by bringing about a reunion of the discordant elements which in 1912 disrupted that great party, and resulted in the election of Mr. Wilson by a minority. The problem of the Democratic party was to retain the votes cast for Mr. Wilson in 1912, and to add to them a sufficient number to overcome the votes which might be added to the Republican vote cast in 1912, plus the votes of those Progressives who should return to the ranks of their old party. It was necessary also to the success of President Wilson to prevent as far as possible a withdrawal from his party of those who found dissatisfaction with his foreign policies, as relating to the European war and to Mexico, and with his domestic policies. It may be said that in a measure both parties succeeded in these great objects. The

union of the Republican and Progressive parties was so complete that but for local disturbances in two of the States, California and Ohio, Mr. Hughes would have been elected. In the other States with one or two exceptions, where the Republican party had been torn asunder in 1912, it was reunited with the Progressive to such an extent that normal Republican majorities were given. Mr. Wilson succeeded in holding the votes cast in 1912, and adding to them the electoral votes of States hitherto Republican or Progressive, which gave to him the small margin of victory which was sufficient.

With one exception the election was the closest ever held. It took weeks to decide whether Hughes or Wilson should be the next President, and the final issue depended on less than 4000 votes. States whose votes were regarded as essential to the victory of one party or the other proved to be non-essential, and the election was finally decided where the voters had been conceded to the Republicans.

Although there was no absence of great issues in the campaign it became towards its end a campaign of personality rather than of party issues. It was the personal acts of President Wilson that were chiefly assailed by the Republican speakers, and the Democrats, in turn, directed their assaults chiefly upon the personality of Mr. Hughes.

The participation of Colonel Roosevelt on the Republican side was another notable feature of the campaign. He fought with his accustomed fire for the election of Mr. Hughes, and there was at no time a question of the loyalty and the wholeheartedness of his support. Mr. Bryan, although he participated in the campaign by making addresses in different parts of the country, was not one of the prominent figures.

The history of the campaign in detail will be narrated in the following main divisions:

- I. THE PRE-CONVENTION CAMPAIGNS.
- II. THE CONVENTIONS.
- III. THE POST-CONVENTION CAMPAIGN.
- IV. THE RESULTS OF THE ELECTION.

#### I. THE PRE-CONVENTION CAMPAIGNS.

**REPUBLICAN PRE-CONVENTION CAMPAIGN.** At the beginning of 1916 three prominent Republicans were mentioned as possible candidates for the Presidency, Theodore Roosevelt, Elihu Root, and Justice Charles E. Hughes. Colonel Roosevelt was the choice of those who saw in his nomination the only hope of reuniting the Republican and Progressive parties, without which reunion there could be no possible hope of defeating President Wilson. Mr. Root represented the choice of those conservative members of the Republican party who wished to maintain the existence of the party along the same lines as had distinguished it prior to 1912. Mr. Hughes was regarded as a compromise candidate. Although he was well known from his career as Governor of New York State, where he had shown remarkable qualities of administration, his attitude toward national policies was unknown, and continued to be unknown until his actual nomination by the convention. There were other candidates frequently mentioned at this time, for the most part men who, while remaining in the Republican party, were strongly identified with the progressive wing of the party.

These included Senator Cummins of Iowa and Senator Borah of Idaho. Other candidates were also spoken of, belonging both to the conservative and to the progressive wings of the party. These included former Senator Burton of Iowa, Henry Ford of Michigan, Senator Sherman of Illinois, and others. At no time did these men acquire more than a passing mention as possibilities, although several of them were candidates in the presidential primary which took place in several of the States.

The chief opposition to the nomination of Mr. Roosevelt centred among those identified with the Republican party in 1912, that is, a conservative element. He was also distrusted by those who feared his possible action in the case of his election, in regard to the war in Europe. His sympathies with the Allies were well known, and he had frequently expressed his resentment toward Germany, and had not hesitated to criticize President Wilson for his failure to present a more aggressive policy toward the Central Powers of Europe and toward Mexico.

Mr. Root, formerly United States Senator from New York, was recognized as one of the most able statesmen of the Republican party. His experience as Secretary of War, Secretary of State, and Senator from New York, together with his natural abilities, made him a conspicuous figure. He was, however, identified to a large extent with the conservative element of the party, and had frequently led the opposition in the Senate against measures advocated by the progressive wing. In the mind of many he was too strongly identified with the so-called "money interests" of the country. From the standpoint of his knowledge of international law and his experience in the handling of foreign relations, it was considered by many that he would be an ideal President in the light of complications which at that time presented themselves on both sides in the European war. It was recognized in the early stage of the campaign, however, that to nominate Mr. Root would be impossible.

Mr. Hughes occupied a peculiar position. He had taken no active part in politics since his appointment to the Supreme Court, and efforts to draw from him any statement in regard to his attitude on the political questions were in vain. Those who advocated his nomination therefore promised nothing, except what could be assumed from his performances as Governor of New York, and from a general knowledge of his characteristics and opinions. The so-called Old Guard of the Republican party did not view his nomination with enthusiasm. Colonel Roosevelt was the only other man whose nomination they feared more.

These in general were the conditions of the Republican party which prevailed at the beginning of the year. The first important utterance in the campaign was delivered at an unofficial convention of the New York Republicans held on February 15th in New York City. This was a speech delivered at that time by Mr. Root. As it was considered to be a "keynote" of the campaign, and contained in effect most of the arguments against Mr. Wilson's policies emphasized in the speeches later in the campaign, it is given at length here.

The address was in effect a powerful arraignment of the administration of President Wilson in the conduct of both domestic and foreign af-

fares. In relation to the responsibility of the President in the conduct of foreign affairs Mr. Root said: "When a President and Secretary of State have been lawfully established in office a power of initiative in foreign affairs rests with them. The nation is in their hands. Theirs the authority and theirs the duty to adopt and act upon policies subject to such laws as Congress may enact within constitutional limits. Parliamentary opposition can take no affirmative step, nor accomplish any affirmative action. The expression of public opinion can do nothing, except as it produces an influence upon the minds of those officers who have the lawful power to conduct our foreign relations."

In regard to conditions in Mexico and the rights of the United States in that country he said: "The United States had rights and duties in Mexico. More than 40,000 of its citizens had sought their fortunes and made their homes there. Thousands of millions of American capital had been invested in that rich and productive country, and millions of income from these enterprises were annually returned to the United States, not merely for the benefit of our whole country, but for its production and enterprise. But revolution had come and factional warfare was ripe. Americans had been murdered, American property had been wantonly destroyed. The lives of all Americans in Mexico were in danger.

"That was the situation when Mr. Wilson became President in March, 1913. His duty then was plain. It was first to use his powers as President to secure protection for the lives and property of Americans in Mexico, and to require that the rules of law and stipulations of treaties should be observed by Mexico towards the United States and its citizens. His duty was, second, as the head of a foreign power, to respect the independence of Mexico, to refrain from all interference with her internal affairs, from all attempts at dominance except as he was justified by the law of nations for the protection of American rights."

Mr. Root declared that the President had failed to fulfill any of these duties; that he interfered in Mexico to aid one faction in civil strife against another; that he undertook to pull down Huerta and set up Carranza in his place; and that when Huerta had refused a demand which was in substance that he should retire permanently from the Government of Mexico, the power of the United States was applied to turn him out. Arms and munitions of war were freely furnished to forces opposed to him, and finally the President sent the army and navy to invade Mexico and capture its great sea port of Vera Cruz and hold it and throttle American commerce until Huerta fell. With the occupation of Vera Cruz the moral power of the United States over Mexico ended. We were then and we are now hated for what we did to Mexico, and we were then and we are now despised for our feeble and irresolute failure to protect the lives and rights of our citizens. No flag is so dishonored and no citizenship so little worth the claiming in Mexico as ours. That is why we have failed in Mexico."

Mr. Root's attitude toward the diplomatic relations of the United States with Europe during the war was even more severe. He said: "A study of the administration's policy toward Europe since July, 1914, reveals three fundamental errors: First, the lack of foresight to make any

provision for backing up American diplomacy by actual or assured military and naval force. Second, the forfeiture of the world's respect for our assertion of rights by pursuing the policy of making threats and failing to make them good. Third, the loss to the moral force of the civilized world through failure to truly interpret to the world the spirit of the American democracy in its attitude toward the terrible events which accompanied the early stages of the war." He contrasted the action of Switzerland and Holland into at once mobilizing their forces of trained soldiers and thus preserving their territory as independent and inviolate with the action of the United States. He said: "Ordinary practical sense in the conduct of affairs demanded that such steps should be taken that behind the peaceable assertion of our country's rights, its independence, and its honor should stand power and manifest purpose, warning the whole world that it would cost too much to press aggression too far." Mr. Root declared that while many persons saw the necessity of such action the Democratic government did not see it, and that the President described those who advocated prompt measures as being nervous and excited.

He then reviewed the course of diplomatic negotiations with Germany following the sinking of merchant ships on which were American citizens. After characterizing the action of the administration as "threatening in words but irresolute in action," he said: "Measured and restrained expression backed to the full by serious purpose have strength and respect. Extreme and belligerent expression, unsupported by resolution, is weak and without effect. No man should draw a pistol who does not dare to shoot. The government that shakes its fist first, and its finger afterward, falls into contempt. Our diplomacy has lost its authority and influence, because we have been brave in words and irresolute in action. Men may say that the words of our diplomatic notes were justified; men may say that our inaction was justified, but no man can say that both our words and our inaction were wise and creditable."

Mr. Root declared that the invasion of Belgium should have been met with strong protest on the part of the American government. He said: "The American people were entitled not only to feel but to speak concerning the wrong done to Belgium. It was not like interference in the internal affairs of Mexico, or any other nation, for this was an international wrong. The law protecting Belgium, which was violated, was our law, and the law of every other civilized country. For generations we have been urging on their help in its development and in its establishment. . . . We have bound ourselves by it; we have regulated our conduct by it; and we are entitled to have other nations observe it. . . . Yet the American government acquiesced in the treatment of Belgium and the destruction of the law of nations. Without one word of objection or dissent to the repudiation of law or the breach of our treaty or the violation of justice and humanity in the treatment of Belgium our government enjoined upon the people of the United States an indiscriminating and all-embracing neutrality, and the President admonished the people that they must be neutral in all respects, in act, word, thought, and sentiment. We were not to be neutral merely as to

FOUR IMPORTANT WORKERS IN THE PRESIDENTIAL CAMPAIGN OF 1916

the quarrels of Europe, but neutral as to the treatment of Belgium; neutral between right and wrong; neutral between justice and injustice; neutral between humanity and cruelty; neutral between liberty and oppression. A single expression by the Government of the United State," said Mr. Root, "a single sentence denying assent and recording disapproval of what Germany did in Belgium would have given to the people of America that leadership to which they are entitled, in their earnest grope for the light. It would have ranged behind American leadership the conscience and morality of the neutral world. It would have brought to American diplomacy the respect of loyalty to a good cause."

In conclusion Mr. Root said: "We have not been following the path of peace. We have been blindly stumbling along the road that, continued, will lead to inevitable war. Our diplomacy has dealt with symptoms and ignored causes. The great decisive question upon which our peace depends is the question whether the rule of action applied to Belgium is to be tolerated. If it is tolerated, by the civilized world, this nation will have to fight for its life. There will be no escape. That is the critical point of defense for the peace of America.

"When our government failed to tell the truth about Belgium, it lost the opportunity for leadership of the moral sense of the American people, and it lost the power which a knowledge of that leadership and a sympathetic response from the moral sense of the world would have given to our diplomacy. When our government failed to make any provision whatever for defending its rights in case they should be trampled upon, it lost the power which a belief in its readiness and will to maintain its rights would have given to its diplomatic representations. When our government gave notice to Germany that it would destroy American lives and American ships at its peril, our words, which would have been potent if sustained by adequate preparation to make them good, and by the prestige and authority of the moral leadership of a great people in a great cause, were treated with a contempt which should have been foreseen; and when our government failed to make those words good, its diplomacy was bankrupt."

Prior to the delivery of this speech Mr. Root had, on January 12th, requested that his name be kept off the Minnesota primary ballot for presidential preference election.

The attitude of Colonel Roosevelt toward the election, at the beginning of the year, was not altogether clear. It was known that under certain conditions he would accept the nomination. As the weeks went by his position in regard to the nomination was made clearer. On January 30th he delivered an address in Brooklyn. It was devoted chiefly to the attitude of the United States toward the European war. Concerning the attitude of the Wilson administration toward the Teutonic powers he said: "We are asked to kiss the bloody hands of the murderers of our women and children and to serve as the tool of these men against those nations which have behaved more valiantly and righteously than we have." He declared that in his opinion the United States was actually bound by the Hague convention to protect Belgian neutrality. He also made a strong plea for preparedness in universal military training. On February 17th he

sailed for the West Indies. He made several speeches during his visit, in some of which he again attacked the Wilson administration. At the same time he gave a statement of his position in regard to the nomination to Henry L. Stoddard of the *New York Mail*. An active effort had been made in Massachusetts to elect delegates at large to the Republican National Convention who should be pledged to his nomination, and in response to an inquiry from Mr. Stoddard in regard to his position he said:

"I will not enter any fight for the nomination, and I will not permit any factional fight to be made in my behalf. Indeed, I will go further and say, it would be a mistake to nominate me unless the country has in its mood something of the heroic, unless it feels not only like devoting itself to ideals, but to the purpose measurably to realize those ideals in action." He continued: "This is one of those rare times which come only in long intervals in a nation's history, when the action taken determines the life of the generations that follow. Such times were those from 1776 to 1789, in the days of Washington, and from 1858 to 1865, in the days of Lincoln. It is for us to grapple with the tremendous national and international problems of our own hour in the spirit and with the ability shown by those who upheld the hands of Washington and Lincoln." He declared that upon the next administration there rests a responsibility for the future of the country which cannot be overestimated. He continued:

"We must clarify and define our policies. We must show that our belief in our governmental ideals is so real that we wish to make them count in the world at large, and to make the necessary sacrifice in order that they shall count surely. We of this great republic have a contribution to make to the cause of humanity, and we cannot make it unless we first show that we can secure prosperity and fair dealing among our own men and women.

"I believe that in a crisis so grave it is impossible too greatly to magnify the needs of the country or too strongly to dwell on the necessity of minimizing and subordinating the desires of individuals. The delegates who go to Chicago will have it in their power to determine the character of the administration which is to do or leave undone the mighty tasks of the next four years. That administration can do an incalculable amount to make or mar our country's future."

Mr. Roosevelt returned to the United States in the latter part of March, and on March 29th gave out a statement replying to a charge made by President Wilson that wealthy American owners of property in Mexico had attempted by sinister methods to bring about the intervention of the United States in that republic. He reviewed the events on the border in the preceding three years, and charged that the loss of American lives in Mexico was due to the shipment of arms to "first one set of bandits and then to another." He charged incompetence and mismanagement on the part of the administration, and characterized the pursuit of Villa as "the second war in Mexico," the Vera Cruz incident being cited as the first. On March 31st Mr. Roosevelt met at the home of Mr. Robert Bacon, former Senator Root, Senator Lodge of Massachusetts, and Gen. Leonard Wood. This was the first meeting of Mr. Roosevelt and Mr.

Root since 1912, when they had parted as a result of the split in the Republican party. Mr. Root was the presiding official at the national convention in 1912, and his conduct in that capacity was bitterly resented by Mr. Roosevelt during the progress of the campaign. This reunion was an indication in the minds of many that an attempt was being made to reconcile Mr. Roosevelt with the leaders of the regular Republican party, although those present at the meeting denied that there had been any effort to bring this about.

On April 5th Mr. Roosevelt made clear to a group of political visitors at Oyster Bay on what conditions he would accept the nomination for presidency. To one of the visitors who suggested that he might be the nominee of the convention Mr. Roosevelt said: "Let me give you a piece of advice. If you have any doubt on the subject do not nominate me. Get it perfectly clear in your head that if you nominate me it mustn't be because you think it is in my interest, but because you think it is in your interest and the interest of the Republican party, and because you think it to the interest of the United States to do so." Roosevelt then continued to outline his belief as to the important issues before the people at the present time.

"Don't be for me unless you are prepared to say that every citizen of this country has got to be pro-United States, first, last and all the time, and not pro anything else at all, and that we stand for every good American everywhere, whatever his birthplace or creed, and wherever he now lives, and that in return we demand that he be an American and nothing else, with no hyphen about him.

"Every American citizen must be for America first and for no other country even second, and he hasn't any right to be in the United States at all if he has any divided loyalty between this country and any other.

"I don't care a rap for the man's creed or birthplace or national origin, so long as he is straight United States. I am for him if he is straight United States, and if he isn't I am against him."

The second item sets forth his views on war:

"I am not for war; on the contrary, I abhor an unjust or a wanton war, and I would use every honorable expedient to avoid even a just war. But I feel with all my heart that you don't, in the long run, avoid war by making other people believe that you are afraid to fight for your own rights.

"Uncle Sam must never wrong the weak; he must never insult any one or wantonly give cause of offense to either the weak or the strong."

The last item deals, of course, with preparedness:

"And don't you nominate me unless you are prepared to take the position that Uncle Sam is to be strong enough to defend his rights and to defend every one of his people wherever those people are, and he can't be strong enough unless he prepares in advance. . . . The squarest possible way to enable him to keep the peace and to keep it on terms that will enable Americans to hold their heads high and not hang them in shame is for him to be so prepared in advance—and I mean prepared in his own soul as well as with his army and navy—that when he says anything the rest of the world will know that he means it, and that he can make it good.

"Don't you try to nominate me unless you think that is the policy that ought to be followed out, and followed out for your sake as much as for mine, and for the sake of the rest of us here in the United States, and don't forget that isn't a course that provokes war; it is the only course that, in the long run, prevents war, and secures national self-respect and guarantees the honor of this country, and the rights of its citizens wherever they may be."

On April 7th 75 prominent Republicans of New York State, including many delegates elected to the national convention, issued a public endorsement of Elihu Root for President. He was set forth in this endorsement as "the ablest liv-

ing American." The platform on which his nomination was proposed was one of Americanism and preparedness. The 75 names included those of Nicholas Murray Butler, Cornelius N. Bliss, Otto Bannard, Joseph H. Choate, Chauncey M. Depew, John G. Milburn, Job E. Hedges, William A. Prendergast, Henry L. Stimson, and Senator James W. Wadsworth, Jr. There were included many well-known lawyers and as a whole those signing the endorsement were identified more or less with the conservative element of the party. The main plank of the platform proposed for the nomination of Mr. Root differed but little in its essentials from that emphasized as being necessary by Mr. Roosevelt.

On April 29th Colonel Roosevelt addressed the members of the Illinois Bar Association in Chicago, speaking on current national and international problems. The address was devoted in the main to the subject of preparedness.

On May 19th he delivered a notable address in Detroit on the same general subjects. This was of more than unusual interest because it was made in the city which is the home of Henry Ford, the most conspicuous advocate of peace. Mr. Roosevelt made no attack upon Mr. Ford, but his address was a long, elaborate, and temperate statement of his beliefs. He declared that the object of preparedness is not war but the prevention of war. As to pacific measures to be adopted he said:

"I believe in a thoroughly efficient navy, the second in size in the world. I believe in a small but thoroughly efficient regular army, an army of 250,000 men, with a proper reserve. This would give us a mobile army of 125,000 men. But back of the regular army and navy must stand the strength of the people themselves, and this strength must be prepared in advance or it will be utterly useless in time of trial."

He did not limit his argument for preparedness to merely military manifestation, but declared:

"There must be a deliberate purpose to see that the health and well-being of the workers, their standard of wages and of living and of the education of their children are held up to the level that will insure the greatest national efficiency, not only for the present, but for the future.

"We must abolish pork-barrel methods in the army—as regards army posts, navy yards, as regards everything else.

"Pork-barrel graft is a crime against the nation when the army and navy are involved. But honesty and efficiency in managing the army and navy only represent the beginning of military preparedness.

"We can have no effective army unless business is mobilized and especially unless our transportation system is nationalized. The railroads, whose business is directly or indirectly interstate, must, in all their relations, be regulated by the national government and not by forty-eight conflicting State governments.

"The merchant marine must be developed not only for our own purpose of peace, but as a basis for the navy. It must be proportionate to the transportation needs and to the navy of this country. Our merchant fleet must build up a naval reserve. We must safeguard the rights of our sailors, but we can only do so if we upbuild the lines of ships on which they are to serve."

Following this address he made a tour in the Middle West, and was heard with great enthusiasm in Kansas City and St. Louis. He finished with a speech at Newark, N. J., on June 1st.

Thus far it will be noted that Mr. Roosevelt was the most conspicuous figure in the pre-convention campaign. The manifesto in behalf of Mr. Root, noted above, did not meet with enthusiasm, and little effort was made thereafter to press his nomination. The sentiment for Mr. Hughes did not approach anywhere to a point of enthusiasm, but he was everywhere spoken

of as a strong possibility. The Republican State Convention adopted a resolution calling for the nomination of "a tried Republican on whose record and character the nation can rely as a guarantee of wise statesmanship in the management of foreign and domestic affairs." Senator Mills, who proposed this resolution, declared that it was intended to favor Mr. Hughes, but Senator Wadsworth, who voted for it, asserted that in accordance with his understanding it was meant to apply to Mr. Root. Mr. Hughes continued to preserve absolute silence in regard to his nomination. He had, however, permitted his name to appear on the ballot in several of the presidential primaries, and the fact that he would serve if nominated was generally accepted. On June 5th he made the only address which put any interpretation on his attitude on questions at issue. Speaking on that date before the graduates of the National Cathedral School at Washington, he urged a strong and efficient nation of undivided allegiance equal to its task.

No other candidate had developed the strength which would indicate their possible nomination in preference to the three already discussed. A number of "favorite sons" of the different States were voted for in the presidential preference primary elections, as will be noted below, but it will be observed that these were indications of local pride, and that they would have little or no strength in the convention.

**DEMOCRATIC PRE-CONVENTION CAMPAIGN.** The pre-convention campaign of the Democrats differed from that of the Republican party in that there was at no time any doubt as to who would be the nominee for the Presidency. Although at the beginning of the year President Wilson had not definitely announced himself as a candidate, he had not indicated in any way that he was unwilling to accept another nomination. On January 6th he permitted his name to be placed on the ballot in the primary election to be held in Indiana in March. This was assumed to be an authoritative indication that he was an active candidate, and there was no discussion of any other nominee on the part of the leaders of the party. It may be said in general that President Wilson made little effort in the months prior to the convention along the lines directly connected with the campaign. He made a number of speeches on national issues, which were of course connected directly with his candidacy in that they outlined his policies and formed a defense of his administration. These addresses, however, come more properly in the history of the administration in 1916 than in the history of the presidential campaign, and they are further treated in the section *Administration* under the article UNITED STATES. It is necessary here to indicate as a record just where these addresses were made, and on what dates.

President Wilson began a series of speeches on preparedness on January 27th at a dinner given by the Railway Business Association in New York, and on the following day he began a speaking tour in the Middle West. On January 29th he spoke at Cleveland, on the 31st in Chicago, and on the days following in other cities of the Middle West, including Topeka, Des Moines, St. Louis, Milwaukee, and Kansas City. On his return from this tour he made an address before the members of the Gridiron Club on February 27th. In his address he declared that

violation of the essential traditions of America would be the only justification for the United States entering the European war. He said: "America ought to keep out of this war. She ought to keep out of this war at the sacrifice of everything except this single thing upon which her character and justice are founded—her sense of humanity and justice." In an address delivered before the National Press Club at Washington, on May 15th, he declared that if the United States did not keep out of the European war there would be nobody to find the solution to the great problem confronting the world when the war was over. On May 27th he made a notable address before the League to Enforce Peace. In this he outlined in general terms the basis on which the United States would undertake, suggest, or initiate the movement for peace in Europe. On May 30th he delivered the Memorial Day address at the Arlington National Cemetery. The keynote of this speech was "America first." Part of this address was given over to a criticism of hyphenated Americans, whom he said he did not blame for a pride of race and love of the places of their birth, but who should not allow this love of another nationality to overthrow their ardor for America. Replying to a criticism that his suggestion for a combination of nations to prevent war meant an entangling alliance for the United States, he declared that he favored an alliance to disentangle the peoples of the world from combinations for their own separate and private interests.

In the presidential preference elections held during the months preceding the convention Mr. Wilson was in all cases the choice of the Democratic voters, and there was no question as to his nomination.

**PROGRESSIVE PRE-CONVENTION CAMPAIGN.** The pre-convention campaign of the Progressive party was so involved with the relations of Mr. Roosevelt to the Republican party as a possible candidate that it is difficult to treat it separately. On January 11th the Progressive national committee met at Chicago and called a national convention to meet in that city at the time of the assembling of the Republican convention and in order to have if possible "both the Progressive and Republican parties choose the same standard bearers, and the same principles." The committee declared its continued allegiance to the following principles:

A broader nationalism; regulation rather than disruption of efficient business concerns, behavior and not size being the test; a permanent non-partisan scientific tariff commission; revision of the tariff to fit war conditions, and for the protection of new industries introduced as a result of the war; equal suffrage; dethronement of the invisible government; an adequate merchant marine.

In addition to these declarations, which in effect were the same as were contained in previous platforms of the party, two new ones were added:

"Complete preparedness not only military but economic; a preparedness that will unify American citizenship and create a renewed loyalty.

"The faith of our forefathers which made the American flag a sufficient protection of American citizens around the world."

The committee closed its declaration with the following statement:

"In this turning point in world history we

will not stick to details; we will lay aside partisanship and prejudice. But we will never surrender those principles for which we stand and have stood. We will follow only a leader who we know stands for them, and is able to put them through."

For the most part there was no attempt to continue the Progressive organization as a party in the different States, and in only a few of the presidential primaries were Progressive tickets presented in nomination.

**PRESIDENTIAL PRIMARY ELECTIONS.** Presidential primary elections were comparatively common in the States in 1916. The movement had first started in 1912, and had been especially urged by the Progressive party as a proper method of indicating preference of voters in the States for a presidential candidate. During the years intervening many of the States had passed measures providing for such elections. It cannot be said that the results of the movement in 1916 indicated that such elections were of special importance. For the most part the candidates voted for were those identified with the States in which the elections were held, and the votes were more or less complimentary. Indiana was the first of the States to hold such an election on March 7th. Charles W. Fairbanks, former Senator from the State, and former Vice-President of the United States, was endorsed by the Republicans without opposition. President Wilson received the Democratic endorsement. On the same day the voters of Vermont ratified a presidential primary measure. In the Minnesota primaries held on March 14th Senator Cummins of Iowa was endorsed by the Republicans for the nomination, the other candidate being Senator La Follette. The voters of North Dakota on March 21st declared their preference for Senator La Follette of Wisconsin for President, defeating Henry D. Estabrook, of New York. In the presidential primaries held in Michigan on April 3rd, Henry Ford of Detroit won the Republican endorsement over Senator William A. Smith. President Wilson was the unopposed Democratic candidate. In the primaries held in Wisconsin on April 4th Senator La Follette received a bare majority of Republican votes. In Iowa on April 10th Senator Cummins received the endorsement of the Iowa Republicans. Senator Sherman was the choice of the voters of Illinois in the preference election held on April 11th. In this election 12,000 Republican voters wrote Theodore Roosevelt's name on the ballots. There was no Democratic candidate in opposition to President Wilson. The Republicans of Nebraska on April 18th declared their preference for Senator Cummins of Iowa, for presidential nominee as against Henry Ford. In the Montana presidential preference primaries held on April 21st the names of Woodrow Wilson and Senator Cummins were the only ones printed on the ballot. In Massachusetts on April 25th the Republicans elected unpledged delegates to the national convention. Four candidates for delegates at large avowedly for Colonel Roosevelt, but running without his approval, received 45,000 votes. In Ohio on the same day the Republicans endorsed Theodore E. Burton for President, and in New Jersey the Republicans owing to technicalities were unable to express their choice, but the Democrats endorsed Woodrow Wilson. In Maryland on May 1st the Republicans elected uninstructed delegates to the na-

tional convention. On May 2nd, in California, the election resulted in a defeat for electors supported by Governor Johnson and the Progressive element. The Pennsylvania Republicans on May 16th expressed their preference for Governor Brumbaugh. In Vermont on the same day Justice Hughes led other Republican candidates, while President Wilson was the unopposed choice of the Democrats.

In all, 19 Northern and Western States elected delegates by direct primary. Wide divergence existed as to methods of electing these delegates, varying from State-wide vote for entire State delegates, as in California, to the election of delegates by counties to a State convention, as in Maryland. In some States there was a direct preferential vote provided for nominees for the presidency, but in most States there was a binding provision compelling the elected delegates to support the preferential candidate in the national convention. As a matter of record it may be noted that primaries were held in different States on the following dates:

California, May 2.	New Jersey, April 25.
Illinois, April 11.	North Dakota, March 21.
Indiana, March 7.	Ohio, April 25.
Maryland, May 1.	Oregon, May 10.
Massachusetts, April 25.	Pennsylvania, May 16.
Michigan, April 8.	South Dakota, May 23.
Minnesota, March 14.	Vermont, March 7.
Nebraska, April 18.	West Virginia, June 6.
New Hampshire, March 14.	Wisconsin, April 4.
Iowa, April 10.	

## II. THE CONVENTIONS

**REPUBLICAN CONVENTION.** At a meeting of the Republican national committee held on Dec. 14, 1915, it was decided that the national convention should meet in Chicago on June 7th. At the same meeting of the committee it was decided to reduce the Southern representation in the national convention to about 30 per cent, less than it had hitherto been. This was done by the application of an apportionment system uniformly throughout the entire country. In accordance with this system the apportionment of delegates from the Southern States was 174 in 1916, instead of 252 as in 1912. New York was the only Northern State which also suffered a loss in representation. There were three less delegates from that State in 1916 than in 1912. The total number of delegates entitled to a vote in convention after this reduction had been made was 984. Although the formal meeting of the convention did not begin until June 7th, by June 1st the preliminary proceedings were well under way. The national committee met to pass on the contested seats and make the arrangements for the convention, but there developed in this first meeting a strong undercurrent of opinion in favor of Mr. Hughes. Senator Reed Smoot of Utah, identified with the conservative wing of the Republican party, was one of the first to declare himself for Mr. Hughes. Colonel Roosevelt, however, had many strong supporters among the Republican leaders.

There was a notable absence of contests for seats in the convention, and in this conditions differed widely from those in 1912, when the bitter fights for seating of rival delegates well-nigh disrupted the convention. Nearly all the contested seats were in the Southern States, and all were settled amicably. The drift toward Hughes noted above aroused alarm among the Republican supporters of Colonel Roosevelt, and

on June 5th George M. Cortelyou arrived in Chicago as a representative of Mr. Roosevelt. Mr. Cortelyou was private secretary to President Roosevelt, and was later Secretary of the Treasury. A strong pro-German opposition to the nomination of Colonel Roosevelt developed during the days prior to the convention. The leaders of this movement were also bitterly opposed to the nomination of Mr. Root. The disposition of these pro-German leaders was for the nomination of Mr. Hughes, although there had been no indication from him that they would receive any support in the event that he was elected. The general attitude of the pro-Germans was that they would support any man proposed by the convention with the exception of Root and Roosevelt.

On June 5th the Hughes sentiment took substance at a meeting of 150 delegates at the Sherman House. These delegates came from a dozen different States, and assembled voluntarily to form an organization. Until this meeting there had been no concrete expression of Mr. Hughes's strength. It had been recognized, but had been difficult to identify. The movement was organized by Charles W. Fulton, former United States Senator from Oregon, and was strongly supported by Governor Whitman of New York, F. H. Hitchcock, and others.

The supporters of "favorite sons" maintained headquarters, but the movement for the support of these never attained serious dimensions. The only important element which these candidacies gave was in the control of the voting. It was claimed that they would have the balance of power in the convention, and would nominate whomever received their vote. The claim was made that the delegates pledged to these candidates controlled at least 600 votes. The canvass made upon the day prior to the meeting of the convention indicated that Mr. Hughes would have the strength of at least 300 votes before a ballot was taken.

The 16th national convention of the Republican party assembled at 11 o'clock on June 8th. Over 12,000 were in the Coliseum, but there was remarkable absence of enthusiasm in the opening hours. A prayer was offered by the Rev. John Timothy Stone, which was followed by a reading of the call for the national convention. There was then an announcement of the temporary officers, who were Senator Warren Harding of Ohio, chairman; William J. Stone, sergeant-at-arms; and James B. Reynolds, secretary. The address of the temporary chairman, Senator Harding, was received with very little applause, and with little enthusiasm. The most notable incident of the first day was the dispatching of a telegram to Colonel Roosevelt by William P. Jackson, the Republican national committeeman from Maryland. This telegram read as follows:

"The national interests demand the complete reunion of the Republican party, which unhappily divided in 1912. I believe that this can be accomplished by a more perfect understanding between you and the Republican party now available. I therefore earnestly urge you to come to Chicago immediately to address this convention, and take common cause with their deliberations. If you will indicate your willingness and adopt this course I will use my utmost endeavors to secure for you the privileges of the convention floor."

This telegram was sent on Mr. Jackson's own

responsibility, although it was believed to have the endorsement of some of the Republican leaders. It was an attempt to bring about a reconciliation between the Progressive and Republican leaders, in order to unite them upon the one candidate. The Progressive convention, as will be noted below, was in session at the same time as the Republican, and efforts made to unite upon one candidate had thus far failed. It was believed by certain leaders of both parties that Mr. Roosevelt was the only person who could bring such an agreement about. While the convention was in session the committee on resolutions headed by Henry C. Lodge was planning the platform. An attempt was made to defeat Mr. Lodge for the position as chairman by those identified with the pro-German movement, but this had failed. Those who drafted the platform were Senator Lodge of Massachusetts, Senator Borah of Idaho, Senator Fall of New Mexico, Senator Oliver of Pennsylvania, Senator Wadsworth of New York, Representative Madden of Illinois, Theodore E. Burton of Ohio, and Charles Hopkins Clark, of Connecticut.

The only propositions which excited controversy in the deliberations of the committee were those relating to Mexico, preparedness, "Americanism," and the references made to the Wilson administration.

The first day of the convention was marked by a procession of suffragettes, who in the midst of a driving rain and windstorm marched down Michigan Avenue.

In a further effort to bring about an agreement between the Republican and Progressive conventions a conference was arranged for by the leaders of the two parties, and on June 8th the following committee was appointed to confer: Republicans, Reed Smoot, W. Murray Crane, William E. Crane, Nicholas Murray Butler, A. R. Johnson; Progressives, George W. Perkins, Hiram Johnson, Horace Wilkinson, Charles J. Bonaparte, and John M. Parker. Two short sessions of the convention were held on June 8th, and no important business was transacted pending the deliberation of the conference. Senator Harding was made permanent chairman, rules for the convention were adopted, and speeches were delivered by Chauncey M. Depew of New York, Joseph G. Cannon of Illinois, and Senator Borah of Idaho. At the afternoon session held on this day the party platform was adopted, and this will be found in full at the conclusion of this section. The conference committee deliberated all day on June 8th, and adjourned at 12.30 o'clock on the morning of June 9th, without having come to any conclusion.

In the meantime Colonel Roosevelt had replied with a long telegram to the message of Mr. Jackson given above. He declared his readiness to address the Republican convention, but declared that that decision remained entirely with the convention. He begged both Republicans and Progressives to keep constantly in mind the gravity of the crisis not only for America, but for the world, and the need that their action in dignity, foresight, and patriotism should rise level to the crisis. He said: "I hope that their aim will not be merely to nominate a man who can be elected next November, but a man of such power, character, steadfast conviction, and proved ability that if elected he will

again place this nation where it belongs by making it true to itself and, therefore, true to all mankind." He declared that the issues which had hitherto divided the Progressives and Republicans sank into nothing compared with those then demanding decision. He assailed the activities of the "professional" German-Americans in attempting to control the nomination of the convention, and the platform utterances. No formal invitation was sent to Colonel Roosevelt to address the Republican convention. The conference committee continued their deliberations throughout June 9th without arriving at any conclusion. The Progressive conferees urged that Colonel Roosevelt was the only solution, but asked the Republicans for a counter-proposal. The latter replied that they had none, and would have none before this convention nominated a candidate. An adjournment was made at 2 A. M. on June 10th without any definite agreement having been arrived at.

The first ballots for nomination were taken on June 9th. Prior to the taking of the ballot the conference committee made the following report:

"Your committee appointed pursuant to the resolution adopted at yesterday's sessions met in conference with the committee representing the National Progressive Convention last evening. The conference was free, frank, and most friendly. The conferees were of one mind in believing that the good of the country and perhaps its repute and influence for years to come depends upon the complete defeat of the present Democratic administration, and restoration of the control of the executive and legislative branches of the government to the hands of those who firmly believe in and will execute the policies that are so heartily supported by the Republican and Progressive parties alike.

"The Progressive conferees were unanimous in urging with temperateness and fairness, the opinion that Theodore Roosevelt, of New York, had so large a personal relation to the issues of the coming campaign as to make him the most desirable candidate upon which to unite.

"It was agreed that your conferees would report these facts to this convention."

Following this report the convention proceeded to the nomination of candidates. On the roll call Arizona yielded to New York. That resulted in the unusual spectacle of one State using the time of another State to nominate two candidates, Mr. Hughes and Mr. Root. Governor Whitman placed Mr. Hughes in nomination. The name of Mr. Hughes as Governor Whitman closed his address was the signal for the start of a remarkable demonstration, in which a majority of the delegates joined, although about half of the New York delegates remained seated, and all those of Indiana, Pennsylvania, New Jersey, Illinois, and some of the smaller States. The other delegates marched uproariously around the convention hall, shouting for the nomination of Hughes. The demonstration lasted over seven minutes.

Following this Nicholas Murray Butler presented the name of Senator Root. This was also followed by a demonstration. Governor Frank D. Willis of Ohio then nominated former Senator Theodore E. Burton, and Senator Lodge of Massachusetts nominated Senator John W. Weeks. Senator Lawrence Y. Sherman of Illinois was nominated by William J. Calhoun of

Illinois, and William R. Wood of Indiana nominated Charles W. Fairbanks. The name of Senator Cummins of Iowa was placed in nomination by Nathan E. Kendall of Iowa. Following all these, Senator Fall of New Mexico nominated Theodore Roosevelt. The nomination was well received, but there was no remarkable outburst of enthusiasm. Senator La Follette of Wisconsin was nominated by M. B. Olbrich of Wisconsin. Following a number of seconding speeches the first ballot was taken. This resulted as follows: Hughes 253½, Weeks 105, Root 103, Cummins 85, Burton 77½, Fairbanks 74½, Sherman 66, Roosevelt 65, Knox 36, Ford 32, Brumbaugh 20, La Follette 25, Taft 14, Du Pont 12, Willis 4, Borah 2, McCall 1. Not voting, 2½. In the second ballot the leading candidates had the following votes. Hughes 325½, Root 98½, Fairbanks 88½, Cummins 85, Roosevelt 81, Weeks 79.

Following the second ballot Senator Penrose moved to adjourn until the following day. This was in accordance with the understanding that had prevailed during the day among the leaders that there should be an adjournment to give the conference committee, after enough ballots had been taken, an idea of the preference of the Republicans. Adjournment was violently opposed by the Hughes delegates, but they were unable to prevent it. Following this the conference committee again went into session.

At the assembling of the convention on the third day there was little doubt as to the nomination of Mr. Hughes. At the opening of the session Senator Smoot reported that the Republican conferees had sent to the Progressive convention the following communication:

"On behalf of the Republican conferees we place for consideration as a candidate, Justice Hughes. It is plain that he will soon command the majority of the support of the Republican convention. His availability as a candidate rests, first, upon his known character and ability, second, upon his public service as Governor of New York, third, upon his removal from any association with the convention of 1912, and the differences which then arose.

"The support of Justice Hughes in the Republican convention reflects spontaneous interest and pleasure in his candidacy, which have shown themselves in widely different States among all classes and groups of voters. These have shown themselves without any organization in his behalf, with the common belief that the candidacy would be acceptable to all groups of Republicans, and would reunite them.

"His preliminary silence as to recent issues is the necessary result of his judicial position. His early speeches and declarations, however, give ground for the assurance that he is in accord with the platform that has been adopted by the Republican and Progressive conventions."

To this communication the Progressive conferees sent a reply promising to present the communication to the national convention. Senator Smoot also reported to the convention that the Progressives had received a telegram from Colonel Roosevelt proposing the name of Henry C. Lodge as a candidate upon whom the two parties might unite.

Upon receiving these reports the convention proceeded to the third ballot. Senator Weeks ascended the platform and withdrew his name, giving his supporters the right to vote for whom

they wished. The name of Senator Sherman was also withdrawn, and after the ballot had begun the name of Colonel Roosevelt was withdrawn. This was followed by the withdrawal of nearly all the other minor candidates. Voting on the third ballot was unanimous for Hughes until Massachusetts was reached. The vote of that State was divided by giving 32 to Hughes, 3 to Roosevelt, and 1 to Weeks. The roll call was completed at 12.30, with the following result: Hughes 949½, Roosevelt 18½, Weeks 3, Lodge 7, Du Pont 5, and La Follette 3. The total vote was 987. Necessary for choice 494. The applause following the announcement of the vote lasted about 15 minutes. It was then moved by Alexander P. Moore of Pittsburgh, a prominent supporter of Colonel Roosevelt, that the nomination be made unanimous. This was seconded by Senator Lodge, who said: "This convention has chosen as its candidate a strong, able, distinguished, upright man, and a thorough American. He should have the cordial support not only of every Republican from one end of the country to the other, but of every man who honestly believes that another four years of the present administration would be a calamity to the United States." The ballot for vice-president then began and Charles W. Fairbanks was nominated by John Wanamaker. The only other nomination was that of Elmer J. Burkett of Nebraska. The vote for vice-president was 869 for Fairbanks, Burkett 108, Borah 7, Hiram W. Johnson of California 2, Webster 2, Burton 1, not voting 4. The nomination of Mr. Fairbanks was then made unanimous. Chairman Harding announced that he had sent a telegram to Justice Hughes informing him of his nomination. The convention adjourned at 2 o'clock. The detailed vote on the last ballot for President is given in the following table:

THE THIRD REPUBLICAN BALLOT WHICH NOMINATED JUSTICE HUGHES

Absent—1 from Pennsylvania.  
Total vote—987.  
Necessary for a choice—494.

Following the message of Senator Harding, announcing his nomination, Mr. Hughes sent the following message of acceptance:

"I have not desired the nomination. I have wished to remain on the bench. But in this critical period in our national history, I recognize that it is your right to summon and that it is my paramount duty to respond. You speak at a time of national exigency, transcending merely partisan considerations. You voice the demand for a dominant, thoroughgoing Americanism with firm protective upbuilding policies, essential to our peace and security; and to that call, in this crisis, I cannot fail to answer with the pledge of all that is in me to the service of our country. Therefore I accept the nomination.

"I stand for the firm and unflinching maintenance of all the rights of American citizens on land and sea. I neither impugn motives nor underestimate difficulties. But it is most regrettably true that in our foreign relations we have suffered incalculably from the weak and vacillating course which has been taken with regard to Mexico—a course lamentably wrong with regard to both our rights and our duties. We interfered without consistency, and while seeking to dictate when we were not concerned, we utterly failed to appreciate and discharge our plain duty to our own citizens.

"At the outset of the administration the high responsibilities of our diplomatic intercourse with foreign nations were subordinated to a conception of partisan requirements, and we presented to the world a humiliating spectacle of ineptitude. Belated efforts have not availed to recover the influence and prestige so unfortunately sacrificed; and brave words have been stripped of their force by indecision.

"I desire to see our diplomacy restored to its best standards and to have these advanced; to have no sacrifices of national interest to partisan expediences; to have the first ability of the country always at its command here and abroad in diplomatic intercourse; to maintain firmly our rights under international law; insisting steadfastly upon all our rights as neutrals, and fully performing our international obligations; and by the clear correctness and justness of our position and our manifest ability and disposition to sustain them to dignify our place among the nations.

"I stand for an Americanism that knows no ulterior purpose; for a patriotism that is single and complete. Whether native or naturalized, of whatever race or creed, we have but one country, and we do not for an instant tolerate any division of allegiance.

"I believe in making prompt provision to assure absolutely our national security. I believe in preparedness, not only entirely adequate for our defense with respect to numbers and equipment in both army and navy, but with all thoroughness to the end that in each branch of the service there may be the utmost efficiency under the most competent administrative heads. We are devoted to the ideals of honorable peace. We wish to promote all wise and practicable measures for the just settlement of international disputes.

"In view of our abiding ideals, there is no danger of militarism in this country. We have no policy of aggression, no lust for territory, no zeal for strife. It is in this

spirit that we demand adequate provision for national defense and we condemn the inexcusable neglect that has been shown in this matter of first national importance. We must have the strength which self-respect demands, the strength of an efficient nation ready for every emergency.

"Our preparation must be industrial and economic as well as military. Our severest tests will come after the war is over. We must make a fair and wise readjustment of the tariff, in accordance with sound protective principle, to insure our economic independence and to maintain American standards of living. We must conserve the just interests of labor, realizing that in democracy, patriotism, and national strength must be rooted an even-handed justice. In preventing as we must, unjust discrimination and monopolistic practices, we must still be zealous to assure the foundations of honest business. Particularly should we seek the expansion of foreign trade. We must not throttle American enterprise here or abroad, but rather promote it and take pride in honorable achievements.

"We must take up the serious problems of transportation, of interstate and foreign commerce, in a sensible and candid manner, and provide an enduring basis for prosperity by the intelligent use of the constitutional powers of Congress, so as adequately to protect the public on the one hand, and, on the other, to conserve the essential instrumentalities of progress.

"I stand for the principles of our civil service laws. In every department of government the highest efficiency must be insisted upon. For all laws and programmes are vain without efficient and impartial administration.

"I cannot within the limits of this statement speak upon all the subjects that will require attention. I can only say that I fully indorse the platform you have adopted.

"I deeply appreciate the responsibility you impose. I should have been glad to have that responsibility placed upon another. But I shall undertake to meet it, grateful for the confidence you express. I sincerely trust that all former differences may be forgotten and that we may have united effort in a patriotic realization of our national need and opportunity.

"I have resigned my judicial office and I am ready to devote myself unreservedly to the campaign.

"CHARLES E. HUGHES."

**PROGRESSIVE NATIONAL CONVENTION.** On January 11th, the Progressive national committee at a meeting in Chicago called a national convention to meet in that city at the same time that the Republican convention was to convene, and in order to have if possible "both the Progressive and Republican parties choose the same standard bearer and the same principles." This statement of the purposes of the convention may be taken as literally true, with this proviso that the "same standard bearer" should be Theodore Roosevelt. There was at no time during the convention the serious consideration of any other candidate for the presidency. The only division in opinion was among those who wished to nominate Mr. Roosevelt, whatever the action of the Republican convention might be, and those who bent their efforts to bring about an agreement between the two conventions to nominate Mr. Roosevelt. The struggle between these two opposing parties went on during the entire convention, and it was not until the action of Mr. Roosevelt himself put an end to the possibility of his nomination that the struggle ceased.

The "Roosevelt or no one" section was led by Victor Murdock of Kansas, Raymond Robbins of Chicago, John M. Parker of Louisiana, and others, and the more conservative wing by George W. Perkins of New York, James R. Garfield of Ohio, and Gifford Pinchot.

The convention was called to order at noon on June 7th by Victor Murdock, chairman of the Progressive national committee. A prayer was offered by Bishop William F. MacDowell, and this was followed by the reading of the call for the convention. Announcement was made that temporary officers would be Raymond Robbins, chairman; Frank P. Corrick, sergeant-at-

arms; and O. K. Davis, secretary. Mr. Robbins then delivered his speech as temporary chairman. The keynote of the address was: Preparedness, the issue, and Roosevelt, the man. He declared that the Progressives would stand by the announcement made by the national committee last January that the party would join the Republicans if they nominated a man true to the Progressive principles; that the principle, however, was greater than the party; if need be the Progressives would go on alone. He asserted that preparedness was the paramount issue of the campaign, and that Theodore Roosevelt was the man of the hour. He said: "Times of stress and ferment bring tribulation to the weak, and opportunity to the strong. The souls of the timid are vexed and the hearts of the valiant are uplifted. Four years ago brave deeds were done in Chicago. From every section of the country there gathered here men of leadership and character, disregarding the ties and associations of a lifetime, even of generations, willing to sacrifice power, influence and friendships, profits of lives of industry and honor in order that they might unite with their fellows in a spirit to bring a new force, a new impulse and a new hope into American politics. They enlisted for public service behind the bravest and wisest leader in our time, behind the foremost private citizen of the world—Theodore Roosevelt."

At the mention of Mr. Roosevelt's name the convention burst into a roar of applause, which lasted for 93 minutes, and was the longest sustained applause ever recorded in a national convention. When order had been restored Mr. Robbins outlined the domestic policies of the party, declared for universal suffrage and universal service. He attacked the leaders of the pro-German propaganda, and assailed the conduct of President Wilson's administration in its policy toward Mexico.

During the first session the delegates showed an enthusiasm which was in marked contrast with the demeanor of the Republican delegates who were at the same time holding their first meeting in the Coliseum. Delegates sang and shouted and showed the utmost exuberance. The convention adjourned its first session at 3.55 P. M. on June 7th, to await the report of the committee on resolutions, which was engaged in drafting the platform.

The second session of the convention met at 2.45 on June 8th. The chairman of the credentials committee reported that there were no contested delegates. From the permanent organization committee it was reported that the temporary officers would be made permanent. James R. Garfield of Ohio then arose to propose a resolution inviting the Republicans to a conference. He declared that the delegates were uncertain as to what action to take, but would certainly lose nothing by retaining the spirit of the declaration of the national committee made in January, that the party would do anything in reason to effect a reunion with the Republicans, but would not surrender its principles. He asked the delegates to be guided by reason rather than by enthusiasm, "and to bring to this country what it needs in this hour of great trial." He then read the following resolution:

"In the spirit of the statement approved at the meeting of the national committee held on January 11th last, the national convention of

the Progressive party invites and requests the national convention of the Republican party to appoint a committee of conference to meet and confer with a similar committee from this body." There were strong protests against this action on the part of certain of the radical delegates. Victor Murdock ascended the platform and made a speech which came almost to the point of bringing about Mr. Roosevelt's nomination. Mr. Robbins shouted to the delegates: "Is this convention supreme, and if so, are we going to surrender to a little coterie?" He asked again, "Do you want Theodore Roosevelt?" The delegates replied with loud cries of "Yes." "Then," shouted Mr. Murdock, "the one thing you ought to send the Republican convention is the nomination." An immense volume of applause responded to this, and it was impossible to secure order for many minutes. When the delegates had finally ceased shouting and taken their seats, the secretary read to the convention the telegram which Colonel Roosevelt had sent to Mr. Jackson, the Republican national committeeman, in response to an invitation to come to Chicago to address the Republican convention. The substance of this telegram has already been given in the section dealing with the Republican convention. Prof. Albert B. Hart followed the reading of the telegram by declaring that while the Progressives ought to wait a reasonable time before nominating Roosevelt, asked "What is a reasonable time?" He added that negotiations were begun months ago, and insisted that the dickering should not be prolonged. He asserted that Roosevelt had already been practically nominated by the convention, and that the actual nomination ought to take place before a ballot was taken in the Republican convention. Charles J. Bonaparte pleaded for a conference with the Republicans. After other addresses the motion for a conference was finally carried, and the sergeant-at-arms was directed to place the resolution in the hands of the Republican chairman.

William D. Lewis of the University of Pennsylvania read the draft of the Progressive platform. This was greeted with cheers, especially the planks dealing with preparedness and woman suffrage. A motion to adopt the platform was made, which was opposed by George W. Perkins, who asserted that it would be a mistake to take such action in view of the conference to be held with the Republican convention. There was some opposition to postponement, but following the announcement that a report had come from the Republican convention that it had decided not to adopt its platform for the present, action was deferred on the Progressive platform. A motion to adjourn until the following morning produced great disorder. Mr. Robbins refused to put the motion, and it was thereupon withdrawn. On receiving notice that the Republicans had appointed members of the conference committee the convention adjourned until 8 P. M. After a short session held at that hour in which the names of the conferees appointed by the Republicans were read, together with an exchange of communications between the two conventions, it was voted to adjourn until 10 o'clock on June 9th. The convention reconvened on June 9th and the unfinished business of adopting a platform was at once taken up. In view of the action taken on the preced-

ing day it was announced that merely the form of the paragraphs would be voted upon for adoption, leaving the question of actual adoption of the substance of the platform contingent upon the conference efforts. The reading of the platform was interrupted by George W. Perkins, who read the following report of the committee:

"Your committee appointed pursuant to the resolution adopted at yesterday's session had a conference with the committee representing the national Republican convention last evening.

"The conference was most friendly. Immediately upon assembling your committee proposed as the joint choice of both conventions the name of Theodore Roosevelt. The committee representing the Republican national convention did not present the name of any candidate nor did it attempt to refute our arguments relating to the unique availability of Theodore Roosevelt as a candidate to unite both parties or to serve our common country in this crucial period in the history of the world.

"After several hours of free discussion, during which no concrete opposition was advanced by the Republican conferees except that a further conference might be desirable this afternoon or evening, the joint committee adjourned."

Following this Mr. Perkins pointed out that the Progressive national committee should aim if possible to unite with the Republican convention as to a national candidate, and if that failed at least to have placed itself so strongly on record with the public that the people would unquestionably agree with the Progressives. He urged the delegates to be calm and to do nothing until further reports had been received from the conference committee. Other addresses were made by Hiram W. Johnson and John M. Parker. The latter said: "Your committee did all in its power. I fail to see the importance of keeping up the Progressive party and principles, but I believe with Mr. Johnson that we will not be able to go very far with those other gentlemen, and should therefore keep our powder dry and be prepared to act in the right time to nominate the one man who can be elected president of the United States." This was followed by another demonstration in favor of Mr. Roosevelt.

The reading of the platform was then resumed, but it was interrupted by the appearance in the convention hall of Senator Borah of Idaho, one of the most prominent leaders of the progressive wing of the Republican party. Senator Borah addressed the convention briefly, urging that the two conventions bear in mind that they had to decide the welfare and destiny of the American people for the next four years, and that this could be done only by working together. He said: "I would not discourage the enthusiasm you have for your leader, but would not be true to my convictions if I did not say that when we leave this city it is essential that we march and fight together in this great conflict." Senator Borah's address was received with great applause.

The afternoon session of the convention was occupied in deliberations over the platform. The greater part of the time was devoted to the question of the insertion of a nation-wide prohibition plank. It was finally voted to lay it on the table. After several addresses the

convention adjourned until the following morning. The session of June 10th was the most remarkable one of the convention, but it began more quietly than the preceding ones. It was called to order at 10.45 by Chairman Robbins, who announced that the convention would proceed with the regular business. Chester Lowell of California announced that a conference was in progress, and that no business should be transacted until the conferees had arrived in the convention hall. After a period of waiting Mr. Perkins arrived in the hall, and reported the result of the final conference of the joint conference committee. In effect he reported that the Republican conferees had agreed on Mr. Hughes and proposed that he be accepted for the Progressives. He reported also that the matter had been laid before Colonel Roosevelt at Oyster Bay, and there had been received from him a communication addressed to the conferees of the other party. In this communication Colonel Roosevelt suggested Senator Lodge of Massachusetts as a compromise candidate. He also urged the Progressive conferees to consider the statement made by Mr. Hughes accepting the Republican nomination, and if they found it acceptable his conditional refusal to accept the nomination would become absolute. The communications from Mr. Roosevelt were a distinct blow to the delegates. The suggestion of Senator Lodge's nomination was received with shouts of disapproval. It was finally voted to lay the communications on the table for a few moments. At 10.50 o'clock the chairman suddenly announced that he would entertain a motion for the nomination of President and Vice-President of the United States, and Bainbridge Colby was recognized. In a speech which lasted only three minutes he nominated Theodore Roosevelt. Reports from the Republican convention at this time showed that the delegates were taking a third ballot, which resulted in the nomination of Mr. Hughes. The nomination of Mr. Roosevelt was seconded by Governor Johnson of California, and following this a vote by acclamation was taken at 2.33 o'clock. Chairman Robbins announced that "Theodore Roosevelt is the Progressive candidate for President of the United States." Two hours previous to this Mr. Hughes had been nominated by the Republicans. John M. Parker of Louisiana was nominated for Vice-President. Shortly following the nomination of Mr. Roosevelt a telegram was received from him which read as follows:

"To the Progressive Convention: I am very grateful for the honor you confer upon me by nominating me as President. I cannot accept it at this time. I do not know the attitude of the candidate for the Republican party toward the vital question of the day.

"Therefore if you desire an immediate decision I must decline the nomination, but if you prefer it I suggest that my conditional refusal to run be placed in the hands of the Progressive national committee.

"If Mr. Hughes' statements when he makes them, shall satisfy the Progressive national committee that it is for the interest of the country that he be elected they can act accordingly, and treat my refusal as definitely accepted.

"If not satisfied, they can so notify the Progressive party, and at the same time they can confer with me, and then determine on whatever action we may severally deem appropriate to meet the needs of the country.

"THEODORE ROOSEVELT."

It was voted to receive the message in the spirit in which it was sent and to refer it to the national committee with power to act upon

it. This was carried, and the convention adjourned.

Immediately after the convention the session of the new national committee was held, in which the entire situation was gone over. The statement of Mr. Hughes was discussed, but no action was taken. It was decided to hold another meeting of the committee in Chicago on June 26th. It was announced by the chairman that should Colorado Republicans refuse to accept the nomination the committee would undoubtedly emphasize its power and fill the vacancy on the ticket. He insisted that there was no intention of giving up the party, and that it would have a standard bearer of its own.

**DEMOCRATIC CONVENTION.** The Democratic convention differed from both the Republican and Progressive in that there was at no time a doubt as to who would be the nominee for the presidency. As indicated in the sections dealing with the pre-convention campaigns, Mr. Wilson was the only candidate suggested, and no other was mentioned as a possibility.

Before the convention convened in St. Louis on June 14th, both the Progressive and Republican conventions had adjourned with their nominations made. Democratic leaders who had gathered in St. Louis prior to the meeting of the convention made no effort to conceal their disappointment at Colonel Roosevelt's refusal to accept the nomination, and the indications that the Progressive party as a party would support Hughes. This was increased when Mr. Hughes sent his telegram of acceptance which contained an aggressive attack upon Mr. Wilson's administration.

In the absence of any contest over the presidential nomination the chief issue involved was the platform. Mr. Baker, Secretary of War, arrived in St. Louis on June 13th with a draft of the platform which had been submitted to President Wilson, and which he had approved. Certain portions of the document Mr. Wilson had written himself. Among these were those which discussed peace and recommended the formation of a world's peace league. It was the intention of certain of the Democratic leaders to insert in the platform a plank condemning Mr. Hughes for resigning from the Supreme Court to become a candidate for the presidency. At the request of President Wilson this was omitted.

The most suggestive feature of the preliminaries to the convention was the practical elimination of Mr. Bryan as a conspicuous figure. In the several previous Democratic conventions he had been the outstanding figure, but his arrival at St. Louis on June 13th was scarcely noticed, and he took little or no active part in the proceedings.

There were several candidates for the vice-presidency, but Mr. Marshall had little opposition. The convention was called to order at noon on June 14th by William H. McCombs, chairman of the national committee. Prayer was offered by the Rev. James W. Lee, of St. Louis, and Martin H. Glynn, former Governor of New York, delivered his address as temporary chairman. The address was a eulogy of President Wilson and his administration, and was well received. The session adjourned following the delivery of this address.

It was the intention of the leaders of the convention to have the nominations for Presi-

dent and Vice-President made on June 16th or 17th. The absence of any important business other than these nominations made it difficult to induce the delegates to remain, and it was insisted that the nominations be made on June 15th. The second session of the convention convened at 11.50 A. M., and following the report of the committee on credentials, Senator Ollie James was chosen permanent chairman, and J. Bruce Kraemer, secretary. Senator James then delivered his address as permanent chairman. He made a severe arraignment of the Republican platform, and defended the actions of President Wilson in both domestic and foreign politics. He emphasized the work that the President had done as peace-maker. He praised the Federal Reserve act, and declared for a big army and navy. Toward the middle of his speech Senator James mentioned the President's name with particular emphasis. This was followed by a demonstration which lasted for 25 minutes. The delegates marched round the hall, carrying the iron standards which bore the State designations. It was suggestive that the New York delegates did not join in this demonstration. Senator James's address was followed by the report of the rules committee, which contained a resolution that the nominations be made before the platform was read. It was suggested that the convention take a recess until 8 P. M., that nominating speeches for President and Vice-President be heard then, and that the business of selecting the delegates be gotten out of the way before the adjournment of the night session. This indicated to the leaders that they could not hold the delegates over Friday. The session was finally adjourned until 9 P. M.

The approach of the night session found an immense crowd of persons besieging the doors of the Coliseum. As soon as the doors were opened the galleries were jammed to the danger point. Every available foot of space was occupied. There was much more cheering and excitement than had distinguished any other session. The session was called to order at 9.15 P. M. by Senator James. Mr. Bryan entered the hall, and there were instant demands for a speech, and following the prayer a resolution was placed by Senator Thompson of Kansas that Mr. Bryan be given the privileges of the floor. There were some dissenting votes, but the majority were in favor, and Mr. Bryan ascended the platform. In his speech he praised the domestic achievements of the Democratic party, the Federal Reserve act, the Income Tax law, and then uttered a glowing panegyric on President Wilson. He strongly defended the President's action in Mexico, and blamed the Mexican situation on the Republican party. He asserted that the country did not want intervention. He concluded his address with an appeal that President Wilson be given another chance.

At 10.16 P. M. Senator James ordered the roll call on the nomination for President. Alabama, the first State on the list, gave way to New Jersey, and John W. Wescott of that State placed Mr. Wilson in nomination. He performed this service in the convention in 1912. Mr. Wescott's speech was in general in line with those who had preceded him, and was almost entirely given over to eulogy of President Wilson and his administration. At 10.50 he placed the President's name in nomination before the convention. Seconding speeches were

made by Judson Harmon of Ohio and Governor Stewart of Virginia.

Mr. Marshall was placed in renomination for the vice-presidency by Senator Kern of Indiana. There were no seconding speeches. Shortly before midnight on June 15th, President Wilson and Vice-President Marshall were renominated by acclamation. In the voting for President there was one dissenter, Robert E. Burke, of Chicago. The vote therefore was 1092 to 1. Vice-President Marshall received the unanimous vote of the delegates. The convention on June 16th adopted the party platform, as approved by President Wilson. The platform will be found at the close of this section. Following the transaction of routine business, the convention adjourned.

**PROHIBITION NATIONAL CONVENTION.** The national convention of the Prohibition party met in St. Paul and held sessions from July 19th to July 21st. The candidates nominated for President were J. Frank Hanly, former Governor of Indiana, and for Vice-President Dr. Ira D. Landrith of Tennessee. Mr. Hanly was opposed for nomination by William Sulzer, former Governor of New York, who received 181 votes. The platform adopted by the convention was unusually important in that it emphasized many issues in addition to that of national prohibition of the liquor traffic. By the terms of the platform the party is committed to a strong opposition to the "wasteful military programme of the Democratic and Republican parties," to maintain an adequate defensive armament, but only until international coöperation can be secured "to dismantle navies and disband armies"; to avoid military intervention in Mexico; to support equal suffrage and the initiative, referendum, and recall; to public ownership of many public utilities; and to a broad programme of social justice.

#### THE PLATFORMS

The most extraordinary feature of the platforms the Republican and Democratic parties adopted in their respective conventions was their lack of diversity on most important questions. It would indeed be difficult for one reading the two platforms side by side to distinguish the Democratic from the Republican. Both platforms favor woman suffrage. The paragraphs differ only in phraseology. Both favor conservation. Both reaffirm the approval of the Monroe Doctrine. Both favor the national enforcement of the child labor law, and both heartily endorse the movement for national preparedness and an increase in the army and navy. The chief distinction between the two platforms is that the Democratic party praises without stint the administration of President Wilson, while the Republican asserts bitterly that it has been a shameful failure.

On certain subjects, however, the platforms differ. The most important of these are the tariff, the Philippines, the control of business, and the regulation of transportation, and merchant marine. Both parties favor the establishment of a tariff commission, but for different reasons. The Democratic party continues its assertion of belief in a tariff for revenue only, while the Republican insists on a tariff for protection to American industries and American labor. Both will use the tariff com-

mission for securing information necessary to revise the existing tariff in accordance with these underlying theories. The Democrats assert that the Underwood Tariff law has been a striking success, while the Republicans declare that it has been saved from utter failure only by the conditions created by the war. The Democratic platform endorses the declaration of the preamble to the proposed Philippine government bill, promising ultimate independence to the islands. The Republican platform insists that to leave the islands to self-government would be nothing short of perfidy; that it would break our pledges, injure our prestige among the nations, and imperil whatever has already been accomplished. The Democratic platform commends the establishment of a Federal trade commission, but makes no suggestions for new legislation dealing with the proposals for the regulation of business. The Republican platform makes a declaration for "rigid supervision and strict regulation of the great corporations of the country," and for the encouragement of American business, at the same time making the assertion that "business success no matter how honestly attained is apparently regarded by the Democratic party as in itself a crime." On the question of the control of transportation the Democratic platform says nothing, while the Republican platform says:

"The entire transportation system of the country has become essentially national. We, therefore, favor such action by legislation or, if necessary, through an amendment to the Constitution of the United States, as will result in placing it under exclusive Federal control."

The Democrats favor a government owned and operated merchant marine. The Republicans are entirely opposed to this policy, and declare in favor of "the payment to ships engaged in the foreign trade of liberal compensation for services actually rendered in carrying the mails, and such further legislation as will build up an adequate American merchant marine."

**REPUBLICAN PLATFORM.** Following is the platform adopted by the Republican national convention:

In 1861 the Republican party stood for the Union. As it stood for the union of the States, it now stands for a united people, true to American ideals, loyal to American traditions, knowing no allegiance except to the Constitution, to the Government, and to the flag of the United States. We believe in American policies at home and abroad.

#### PROTECTION OF AMERICAN RIGHTS

We declare that we believe in and will enforce the protection of every American citizen in all the rights secured to him by the Constitution, treaties, and the law of nations, at home and abroad, by land and sea. These rights, which, in violation of the specific promise of their party, made at Baltimore in 1912, the Democratic President and the Democratic Congress have failed to defend, we will unflinchingly maintain.

#### FOREIGN RELATIONS

We desire peace, the peace of justice and right, and believe in maintaining a straight and honest neutrality between the belligerents in the great war in Europe. We must perform all our duties and insist upon all our rights as neutrals, without fear and without favor. We believe that peace and neutrality, as well as the dignity and influence of the United States, cannot be preserved by shifting expedients, by phrasemaking, by performances in language or by attitudes ever changing in an effort to secure groups of voters.

The present administration has destroyed our influence abroad and humiliated us in our own eyes. The Republican party believes that a firm, consistent, and courageous foreign policy, always maintained by Repub-

lican Presidents in accordance with American traditions, is the best as it is the only true way to preserve our peace and restore us to our rightful place among the nations. We believe in the pacific settlement of international disputes and favor the establishment of a world court for that purpose.

#### MEXICO

We deeply sympathize with the fifteen million people of Mexico, who, for three years, have seen their country devastated, their homes destroyed, their fellow-citizens murdered and their women outraged by armed bands of desperadoes led by self-seeking, conscienceless agitators, who, when temporarily successful in any locality, have neither sought nor been able to restore order or establish and maintain peace.

We express our horror and indignation at the outrages which have been and are being perpetrated by these bandits upon American men and women, who were or are in Mexico by invitation of the laws and of the government of that country, and whose rights to security of person and property are guaranteed by solemn treaty obligations. We denounce the indefensible methods of interference employed by this administration in the internal affairs of Mexico, and refer with shame to its failure to discharge the duty of this country as next friend to Mexico, its duty to other Powers who have relied upon us as such friend, and its duty to our citizens in Mexico, in permitting the continuance of such conditions, first, by failure to act promptly and firmly, and secondly, by lending its influence to the continuation of such conditions through recognition of one of the factions responsible for these outrages.

We pledge our aid in restoring order and maintaining peace in Mexico. We promise to our citizens on and near our border, and to those in Mexico, wherever they may be found, adequate and absolute protection in their lives, liberty, and property.

#### MONROE DOCTRINE

We reaffirm our approval of the Monroe Doctrine, and declare its maintenance to be a policy of this country essential to its present and future peace and safety, and to the achievement of its manifest destiny.

#### LATIN AMERICA

We favor the continuation of Republican policies, which will result in drawing more and more closely the commercial, financial and social relations between this country and the countries of Latin America.

#### PHILIPPINES

We renew our allegiance to the Philippine policy inaugurated by McKinley, approved by Congress, and consistently carried out by Roosevelt and Taft. Even in this short time it has enormously improved the material and social conditions of the islands, given the Philippine people a constantly increasing participation in their Government, and, if persisted in, will bring still greater benefits in the future.

We accepted the responsibility of the islands as a duty to civilization and the Filipino people. To leave with our task half done would break our pledges, injure our prestige among nations, and imperil what already has been accomplished.

We condemn the Democratic Administration for its attempt to abandon the Philippines, which was prevented only by the vigorous opposition of Republican members of Congress, aided by a few patriotic Democrats.

#### RIGHT OF EXPATRIATION

We reiterate the unqualified approval of the action taken in December, 1911, by the President and Congress to secure with Russia, as with other countries, a treaty that will recognize the absolute right of expatriation and prevent all discrimination of whatever kind between American citizens, whether native-born or alien, and regardless of race, religion, or previous political allegiance. We renew the pledge to observe this principle and to maintain the right of asylum, which is neither to be surrendered nor restricted, and we unite in the cherished hope that the war which is now desolating the world may speedily end, with a complete and lasting restoration of brotherhood among the nations of the earth and the assurance of full equal rights, civil and religious, to all men in every land.

#### PROTECTION OF THE COUNTRY

In order to maintain our peace and make certain the security of our people within our own borders, the country must have not only adequate, but thorough and complete national defense, ready for any emergency. We must have a sufficient and effective regular army and a provision for ample reserves, already drilled and disciplined, who can be called at once to the colors when the hour of danger comes.

We must have a navy so strong and so well proper-

tioned and equipped, so thoroughly ready and prepared, that no enemy can gain command of the sea and effect a landing in force on either our Western or our Eastern coast. To secure these results we must have a coherent and continuous policy of national defense, which even in these perilous days the Democratic party has utterly failed to develop, but which we promise to give to the country.

#### TARIFF

The Republican party stands now, as always, in the fullest sense for the policy of tariff protection to American industries and American labor, and does not regard an anti-dumping provision as an adequate substitute. Such protection should be reasonable in amount, but sufficient to protect adequately American industry and American labor, and be so adjusted as to prevent undue exactions by monopolies or trusts. It should, moreover, give special attention to securing the industrial independence of the United States, as in the case of dyestuffs.

Through wise tariff and industrial legislation our industries can be so organized that they will become not only a commercial bulwark but a powerful aid to national defense.

The Underwood Tariff act is a complete failure in every respect. Under its administration, imports have enormously increased, in spite of the fact that the intercourse with foreign countries has been largely cut off by reason of the war, while the revenues, of which we stand in such dire need, have been greatly reduced. Under the normal conditions which prevailed prior to the war, it was clearly demonstrated that this act deprived the American producer and the American wage-earner of that protection which entitled them to meet their foreign competitors, and, but for the adventitious conditions created by the war, would long since have paralyzed all forms of American industry and deprived American labor of its just reward.

It has not in the least reduced the cost of living, which has constantly advanced from the date of its enactment. The welfare of our people demands its repeal and the substitution of a measure which, in peace, as well as in war, will produce ample revenue and give reasonable protection to all forms of American production in mine, forest, field and factory.

We favor the creation of a Tariff Commission, with complete power to gather and compile information for the use of Congress in all matters relating to the tariff.

#### BUSINESS

The Republican party has long believed in the rigid supervision and strict regulation of the transportation and great corporations of the country. It has put its creed into its deeds, and all really effective laws regulating the railroads and the great industrial corporations are the work of Republican Congresses and Presidents. For this policy of regulation and supervision the Democrats, in a stumbling and piecemeal way, are undertaking to involve the Government in business which should be left within the sphere of private enterprise and indirect competition with its own citizens, a policy which is sure to result in waste, great expense to the taxpayer, and in an inferior product.

The Republican party firmly believes that all who violate the laws in regulation of business should be individually punished. But prosecution is very different from persecution, and business success, no matter how honestly attained, is apparently regarded by the Democratic party as in itself a crime. Such doctrines and beliefs choke enterprise and stifle prosperity. The Republican party believes in encouraging American business, as it believes in and will seek to advance all American interests.

#### RURAL CREDITS

We favor an effective system of rural credits as opposed to the ineffective law proposed by the present Democratic Administration.

#### RURAL FREE DELIVERY

We favor the extension of the rural free delivery system and condemn the Democratic Administration for curtailing and crippling it.

#### MERCHANT MARINE

In view of the policies adopted by all the maritime nations to encourage their shipping interests, and in order to enable us to compete with them for the ocean-carrying trade, we favor the payment to ships engaged in the foreign trade of liberal compensation for services actually rendered in carrying the mails, and such further legislation as will build up an adequate American merchant marine and give us ships which may be requisitioned by the Government in time of national emergency.

We are utterly opposed to the Government ownership of vessels, as proposed by the Democratic party, because Government-owned ships, while effectively preventing the development of the American merchant marine by private capital, will be entirely unable to provide for the vast

volume of American freights, and will leave us more helpless than ever in the hard grip of foreign syndicates.

#### RAILROADS

Interstate and intrastate transportation has become so interwoven that the attempt to apply two, and often several, sets of laws to its regulation has produced conflicts of authority, embarrassment in operation, and inconvenience and expense to the public.

The entire transportation system of the country has become essentially national. We, therefore, favor such action by legislation, or, if necessary, through an amendment to the Constitution of the United States, as will result in placing it under exclusive Federal control.

#### ECONOMY AND A NATIONAL BUDGET

The increasing cost of the National Government, and the need for the greatest economy of its resources, in order to meet the growing demands of the people for Government service, call for the severest condemnation of the wasteful appropriations of this Democratic Administration, of its shameless raids on the treasury, and of its opposition to and rejection of President Taft's oft-repeated proposals and earnest efforts to secure economy and efficiency through the establishment of a simple, businesslike budget system, to which we pledge our support, and which we hold to be necessary to effect a needed reform in the administration of national finances.

#### CONSERVATION

We believe in a careful husbandry of all the natural resources of the Nation—a husbandry which means development without waste, use without abuse.

#### CIVIL SERVICE REFORM

The Civil Service Law has always been sustained by the Republican party, and we renew our repeated declaration that it shall be thoroughly and honestly enforced and extended wherever practicable. The Democratic party has created since March 4, 1913, 30,000 offices outside of the Civil Service Law, at an annual cost of \$44,000,000 to the taxpayers of the country.

We condemn the gross abuse and the misuse of the law by the present Democratic Administration and pledge ourselves to a reorganization along lines of efficiency and economy.

#### TERRITORIAL OFFICIALS

Reaffirming the attitude long maintained by the Republican party, we hold that officials appointed to administer the Government of any territory should be bona-fide residents of the territory in which their duties are to be performed.

#### LABOR LAWS

We pledge the Republican party to the faithful enforcement of all Federal laws passed for the protection of labor. We favor vocational education, the enactment and rigid enforcement of a Federal child labor law, the enactment of a generous and comprehensive workmen's compensation law, within the commerce power of Congress, and an accident compensation law covering all Government employees. We favor the collection and collation under the direction of the Department of Labor of complete data relating to industrial hazards for the information of Congress, to the end that such legislation may be adopted as may be calculated to secure the safety, conservation, and protection of labor from the dangers incident to industry and transportation.

#### SUFFRAGE

The Republican party, reaffirming its faith in Government of the people, by the people, for the people, as a measure of justice to one-half of the adult people of this country, favors the extension of the suffrage to women, but recognizing the right of each State to settle this question for itself.

Such are our principles, such are our purposes and policies. We close as we began. The times are dangerous, and the future is fraught with peril. The great issues of the day have been confused by words and phrases. The American spirit which made the country and saved the Union has been forgotten by those charged with the responsibility of power. We appeal to all Americans, whether naturalized or native born, to prove to the world that we are Americans in thought and in deed, with one loyalty, one hope, one aspiration. We call on all Americans to be true to the spirit of America; to the great traditions of their common country, and, above all things, to keep the faith.

**DEMOCRATIC PLATFORM.** The platform adopted by the Democratic national convention is as follows:

#### PREAMBLE

The Democratic party, in National Convention assembled, adopts the following declaration to the end that

the people of the United States may both realize the achievements wrought by four years of Democratic administration and be apprised of the policies to which the party is committed for the further conduct of national affairs.

#### RECORD OF ACHIEVEMENT

We indorse the administration of Woodrow Wilson. It speaks for itself. It is the best exposition of sound Democratic policy at home and abroad.

We challenge comparison of our record, our keeping of pledges and our constructive legislation with those of any party of any time.

We found our country hampered by special privilege, a vicious tariff, obsolete banking laws and an inelastic currency. Our foreign affairs were dominated by commercial interests for their selfish ends. The Republican party, despite repeated pledges, was impotent to correct abuses which it had fostered. Under our administration, under a leadership which has never faltered, these abuses have been corrected, and our people have been freed therefrom.

Our archaic banking and currency system, prolific of panic and disaster under Republican Administrations—long the refuge of the Money Trust—has been supplanted by the Federal Reserve Act, a true democracy of credit under Government control, already proved a financial bulwark in a world crisis, mobilising our resources, placing abundant credit at the disposal of legitimate industry, and making a currency panic impossible. We have created a Federal Trade Commission to accommodate the perplexing questions arising under the Anti-Trust Laws, so that monopoly may be strangled at its birth and legitimate industry encouraged. Fair competition in business is now assured.

We have effected an adjustment of the tariff, adequate for revenue under peace conditions, and fair to the consumer and to the producer. We have adjusted the burdens of taxation so that swollen incomes bear their equitable shares. Our revenues have been sufficient in times of world stress, and will largely exceed the expenditures for the current fiscal year.

We have lifted human labor from the category of commodities, and have secured to the working man the right of voluntary association for his protection and welfare; we have protected the rights of the laborer against the unwarranted issuance of writs of injunction, and have guaranteed to him the right of trial by jury in case of alleged contempt committed outside the presence of the court.

We have advanced the parcel post to genuine efficiency, enlarged the postal savings system, added 10,000 rural delivery routes and extensions, thus reaching 2,250,000 additional people, improved the postal service in every branch, and for the first time in our history placed the post-office system on a self-supporting basis, with actual surplus in 1913, 1914 and 1916.

#### ECONOMIC FREEDOM

The reforms which were most obviously needed to clear away privilege, prevent unfair discrimination, and release the energies of men of all ranks and advantages, have been effected by recent legislation. We must now remove, so far as possible, every remaining element of unrest and uncertainty from the path of the business men of America and secure for them a continued period of quiet, assured and confident prosperity.

#### TARIFF

We reaffirm our belief in the doctrine of a tariff for the purpose of providing sufficient revenue for the operation of the Government economically administered, and unreservedly indorse the Underwood Tariff Law as truly exemplifying that doctrine. We recognize that tariff rates are necessarily subject to change to meet changing conditions in the world's production and trade. The events of the last two years have brought about many momentous changes. In some respects their effects are yet conjectural and wait to be disclosed, particularly in regard to our foreign trade.

Two years of a war which has directly involved most of the chief industrial nations of the world, and which has indirectly affected the life and industry of all nations, are bringing about economic changes more varied and far reaching than the world has ever before experienced. In order to ascertain just what those changes may be, the Democratic Congress is providing for a non-partisan tariff commission to make impartial and thorough study of every economic fact that may throw light either upon our past or upon our future fiscal policy with regard to the imposition of taxes on imports or with regard to the changed and changing conditions under which our trade is carried on. We cordially indorse this timely proposal and declare ourselves in sympathy with the principle and purpose of shaping legislation within that field in accordance with clearly established facts rather than in accordance with the demands of selfish interests

or upon information provided largely, if not exclusively, by them.

#### AMERICANISM

The part the United States will play in the new day of international relationships which is now upon us will depend upon our preparation and our character. The Democratic party therefore recognizes the assertion and triumphant demonstration of the indivisibility and coherent strength of the Nation as the supreme issue of this day, in which the whole world faces the crisis of manifold change. It summons all men, of whatever origin or creed, who would count themselves Americans, to join in making clear to all the world the unity and consequent power of America.

This is an issue of patriotism. To taint it with partisanship would be to defile it. In this day of test America must show itself not a Nation of partisans, but a Nation of patriots. There is gathered here in America the best of the blood, the industry and the genius of the whole world, the elements of a great race, and a magnificent society to be melted into a mighty and splendid nation.

Whoever, actuated by the purpose to promote the interest of a foreign power in disregard of our own country's welfare or to injure this Government in its foreign relations or cripple or destroy its industries at home, and whoever, by arousing prejudices of a racial, religious or other nature, creates discord and strife among our people so as to obstruct the wholesome process of unification, is faithless to the trust which the privileges of citizenship repose in him and disloyal to his country.

We, therefore, condemn as subversive of this Nation's unity and integrity, and as destructive of its welfare, the activities and designs of every group or organization, political or otherwise, that has for its object the advancement of the interest of a foreign power, whether such object is promoted by intimidating the Government, a political party, or representatives of the people, or which is calculated and tends to divide our people into antagonistic groups, and thus to destroy that complete agreement and solidarity of the people, and that unity of sentiment and national purpose so essential to the perpetuity of the Nation and its free institutions.

We condemn all alliances and combinations of individuals in this country, of whatever nationality or descent, who agree and conspire together for the purpose of embarrassing or weakening our Government or of improperly influencing or coercing our public representatives, in dealing or negotiating with any foreign power.

We charge that such conspiracies among a limited number exist, and have been instigated for the purpose of advancing the interests of foreign countries to the prejudice and detriment of our own country. We condemn any political party which, in view of the activity of such conspirators, surrenders its integrity or modifies its policy.

#### PREPAREDNESS

Along with the proof of our character as a Nation must go the proof of our power to play the part that legitimately belongs to us. The people of the United States love peace. They respect the rights and covet the friendship of all other nations. They desire neither any additional territory nor any advantage which cannot be peacefully gained by their skill, their industry or their enterprise; but they insist upon having absolute freedom of national life and policy, and feel that they owe it to themselves, and to the rôle of spirited independence which it is their sole ambition to play, that they should render themselves secure against the hazard of interference from any quarter, and should be able to protect their rights upon the seas or in any part of the world.

We therefore favor the maintenance of an army fully adequate to the requirements of order, of safety and of the protection of the Nation's rights, the fullest development of modern methods of seacoast defense, and the maintenance of an adequate reserve of citizens trained to arms and prepared to safeguard the people and territory of the United States against any danger of hostile action which may unexpectedly arise, and a fixed policy for the continuous development of a navy worthy to support the great naval traditions of the United States, and fully equal to the international tasks which the United States hopes and expects to take a part in performing. The plans and enactments of the present Congress afford substantial proof of our purpose in this exigent matter.

#### INTERNATIONAL RELATIONS

The Democratic Administration has throughout the present war scrupulously and successfully held to the old paths of neutrality and of the peaceful pursuit of the legitimate objects of our national life, which statesmen of all parties and creeds have prescribed for themselves in America since the beginning of our history. But the circumstances of the last two years have revealed necessities of international action which no former generation can have foreseen.

We hold that it is the duty of the United States to use its power not only to make itself safe at home but also to make secure its just interests throughout the world, and both for this end and in the interest of humanity to assist the world in securing settled peace and justice.

We believe that every people has the right to choose the sovereignty under which it shall live; that the small states of the world have a right to enjoy from other nations the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon, and that the world has a right to be free from every disturbance of its peace that has its origin in aggression or disregard of the rights of peoples and nations, and we believe that the time has come when it is the duty of the United States to join with the other nations of the world in any feasible association that will effectively serve these principles, to maintain inviolate the complete security of the highway of the seas for the common and unhindered use of all nations.

The present administration has consistently sought to act upon and realize in its conduct of the foreign affairs of the Nation the principle that should be the object of any association of the nations formed to secure the peace of the world and the maintenance of national and individual right. It has followed the highest American traditions.

It has preferred respect for the fundamental rights of smaller states, even to property interests, and has secured the friendship of the people of these states for the United States by refusing to make a more material interest an excuse for the assertion of our superior power against the dignity of their sovereign independence.

It has regarded the lives of its citizens and the claims of humanity as of greater moment than material rights, and peace as the best basis for the just settlement of commercial claims. It has made the honor and ideals of the United States its standard alike in negotiation and action.

#### PAN-AMERICAN CONCORD

We recognize now, as we have always recognized, a definite and common interest between the United States with the other peoples and republics of the Western Hemisphere in all matters of national independence and free political development. We favor the establishment and maintenance of the closest relations of amity and mutual helpfulness between the United States and the other republics of the American continents for the support of peace and the promotion of a common prosperity. To that end we favor all measures which may be necessary to facilitate intimate intercourse and promote commerce between the United States and her neighbors to the south of us, and such international understandings as may be practicable and suitable to accomplish these ends.

We commend the action of the Democratic Administration in holding the Pan-American Financial Conference at Washington in May, 1915, and organizing the International High Commission, which represented the United States in the recent meeting of representatives of the Latin-American republics at Buenos Aires, April, 1916, which have so greatly promoted the friendly relations between the people of the Western Hemisphere.

#### MEXICO

The Monroe Doctrine is reasserted as a principle of Democratic faith. That doctrine guarantees the independent republics of the two Americas against aggression from another continent. It implies as well the most scrupulous regard upon our part for the sovereignty of each of them.

The want of a stable, responsible government in Mexico, capable of repressing and punishing marauders and bandit bands, who have not only taken the lives and seized and destroyed the property of American citizens in that country, but have insolently invaded our soil, made war upon and murdered our people thereon, has rendered it necessary temporarily to occupy, by our armed forces, a portion of the territory of that friendly state, where until by the restoration of law and order therein, a repetition of such incursions is improbable, the necessity for their remaining will continue.

Intervention, implying as it does military subjugation, is revolting to the people of the United States, notwithstanding the provocation to that course has been great, and should be resorted to, if at all, only as a last resort. The stubborn resistance of the President and his advisers to every demand and suggestion to enter upon it, is creditable alike to them and to the people in whose name he speaks.

#### MERCHANT MARINE

Immediate provision should be made for the development of the carrying trade of the United States. Our foreign commerce has in the past been subject to many unnecessary and vexatious obstacles in the way of legislation of Republican Congresses. Until the recent Democratic tariff legislation, it was hampered by unreasonable

burdens of taxation. Until the recent banking legislation it had at its disposal few of the necessary instrumentalities of international credit and exchange. Until the formulation of the pending act to promote the construction of a merchant marine it lacked even the prospect of adequate carriage by sea.

We heartily indorse the purposes and policy of the pending Shipping Bill and favor all such additional measures of constructive or remedial legislation as may be necessary to restore our flag to the seas and to provide further facilities for our foreign commerce, particularly such laws as may be made to remove unfair conditions of competition in the dealings of American merchants and producers with competitors in foreign markets.

#### CONSERVATION

For the safeguarding and quickening of the life of our own people, we favor the conservation and development of the natural resources of the country by means of a policy which shall be positive rather than negative, a policy which shall not withhold such resources from development, but which, while permitting and encouraging their use, shall prevent both waste and monopoly in their exploitation, and we earnestly favor the passage of acts which will accomplish these objects, and we reaffirm the declaration of the platform of 1912 on this subject. The policy of reclaiming our arid lands should be steadily adhered to.

#### THE ADMINISTRATION AND THE FARMER

We favor the vigorous prosecution of investigation and plans to render agriculture more profitable and country life more healthful, comfortable and attractive, and we believe that this should be a dominant aim of the Nation as well as of the States. With all its recent improvement, farming still lags behind other occupations in development as a business, and the advantages of an advancing civilization have not accrued to rural communities in a fair proportion.

Much has been accomplished in this field under the present administration—far more than under any previous administration. In the Federal Reserve Act of the last Congress and the Rural Credits Act of the present Congress, the machinery has been created which will make credit available to the farmer constantly and readily, and he has at last been put upon a footing of equality with the merchant and the manufacturer in securing the capital necessary to carry on his enterprises. Grades and standards necessary to the intelligent and successful conduct of the business of agriculture have also been established, or are in the course of establishment by law.

The long needed Cotton Futures Act, passed by the Sixty-third Congress, has now been in successful operation for nearly two years. A Grain Grades Bill, long needed, and a Permissive Warehouse Bill, intended to provide better storage facilities and to enable the farmer to obtain certificates upon which he may secure advances of money, have been passed by the House of Representatives, have been favorably reported to the Senate and will probably become law during the present session of Congress. Both Houses have passed a good roads measure, which will be of far reaching benefit to all agricultural communities.

Above all, the most extraordinary and significant progress has been made, under the direction of the Department of Agriculture, in extending and perfecting practical farm demonstration work, which is so rapidly substituting scientific for empirical farming. But it is also necessary that rural activities should be better directed through coöperation and organization, that unfair methods of competition should be eliminated, and the conditions requisite for the just, orderly and economical marketing of farm products created. We approve the Democratic administration for having emphatically directed attention for the first time to the essential interests of agriculture involved in farm marketing and finance, for creating the office of markets and rural organization in connection with the Department of Agriculture, and for extending the coöperative machinery necessary for conveying information to farmers by means of demonstrations. We favor continued liberal provision not only for the benefit of production, but also for the study and solutions of problems of farm marketing and finance, and for the extension of existing agencies for improving country life.

#### GOOD ROADS

The happiness, comfort and prosperity of rural life and the development of the city are alike conserved by the construction of public highways. We therefore favor national aid in the construction of post roads and roads for military purposes.

#### GOVERNMENT EMPLOYMENT

We hold that the life, health and strength of the men, women and children of the nation are its greatest asset and that in the conservation of these the Federal Gov-

ernment, wherever it acts as the employer of labor, should both on its own account and as an example, put into effect the following principles of just employment:

- (1) A living wage for all employees.
- (2) A working day not to exceed eight hours, with one day of rest in seven.
- (3) The adoption of safety appliances and the establishment of thoroughly sanitary conditions of labor.
- (4) Adequate compensation for industrial accidents.
- (5) The standards of the Uniform Child Labor Law wherever minors are employed.
- (6) Such provisions for decency, comfort and health in the employment of women as should be accorded the mothers of the race.
- (7) An equitable retirement law providing for the retirement of superannuated and disabled employees of the civil service, to the end that a higher standard of efficiency may be maintained.

We believe also that the adoption of similar principles should be urged and applied in the legislation of the States with regard to labor within their borders, and that through every possible agency the life and health of the people of the nation should be conserved.

**LABOR**

We declare our faith in the Seamen's Act, passed by the Democratic Congress, and we promise our earnest continuance of its enforcement.

We favor the speedy enactment of an effective Federal Child Labor Law and the regulation of the shipment of prison-made goods in interstate commerce.

We favor the creation of a Federal Bureau of Safety in the Department of Labor, to gather facts concerning industrial hazards and to commend legislation concerning the maiming and killing of human beings.

We favor the extension of the powers and functions of the Federal Bureau of Mines.

We favor the development upon a systematic scale of the means already begun under the present administration, to assist laborers throughout the nation to seek and obtain employment, and the extension by the Federal Government of the same assistance and encouragement as is now given to agricultural training.

We heartily recommend our newly established Department of Labor for its excellent record in settling industrial strikes by personal advices and through conciliating agents.

**PUBLIC HEALTH**

We favor a thorough consideration of the means and methods by which the Federal Government handles questions of public health, to the end that human lives may be conserved by the elimination of loathsome disease, the improvement of sanitation and the diffusion of a knowledge of disease prevention.

We favor the establishment by the Federal Government of tuberculosis sanitariums for needy tubercular patients.

**SENATE RULES**

We favor such an alteration of the rules of procedure of the Senate of the United States as will permit the prompt transaction of the Nation's legislative business.

**ECONOMY AND THE BUDGET**

We demand careful economy in all expenditures for the support of the Government, and to that end favor a return by the House of Representatives to its former practice of initiating and preparing all appropriation bills through a single committee chosen from its membership, in order that responsibility may be centred, expenditure standardized and made uniform, and waste and duplication in the public service as much as possible avoided. We favor this as a practicable first step toward a budget system.

**CIVIL SERVICE**

We reaffirm our declaration for the rigid enforcement of the civil service laws.

**PHILIPPINE ISLANDS**

We heartily indorse the provisions of the bill recently passed by the House of Representatives further promoting self-government in the Philippine Islands, as being in fulfillment of the policy declared by the Democratic party in its last national platform, and we reiterate our endorsement of the purpose of ultimate independence for the Philippine Islands expressed in the preamble of that measure.

**WOMAN SUFFRAGE**

We recommend the extension of the franchise to the women of the country by the States upon the same terms as to men.

**PROTECTION OF CITIZENS**

We again declare the policy that the sacred right of American citizenship must be preserved at home and abroad, and that no treaty with any other Government shall receive the sanction of our Government which does

not expressly recognize the absolute equality of all our citizens, irrespective of race, creed or previous nationality, and which does not recognize the right of expatriation. The American Government should protect American citizens in their right not only at home but abroad, and any country having a Government should be held to strict accountability for any wrongs done them, either to person or property.

At the earliest practical opportunity, our country should strive earnestly for peace among the warring nations of Europe and seek to bring about the adoption of the fundamental principle of justice and humanity, that all men shall enjoy equality of right and freedom from discrimination in the lands wherein they dwell.

**PRISON REFORM**

We demand that the modern principles of prison reform be applied in our Federal penal system. We favor such work for prisoners as shall give them training in remunerative occupations, so that they may make an honest living when released from prison; the setting apart of the net wages of the prisoner to be paid to his dependent family or to be reserved for his own use upon his release; the liberal extension of the principles of the Federal Parole Law, with due regard both to the welfare of the prisoner and the interests of society; the adoption of the probation system, especially in the case of first offenders not convicted of serious crimes.

**PENSIONS**

We renew the declaration of recent Democratic platforms relating to generous pensions for soldiers and their widows, and call attention to our record of performance in this particular.

**WATERWAY AND FLOOD CONTROL**

We renew the declaration in our last two platforms relating to the development of our waterways. The recent devastation of the Lower Mississippi Valley and several other sections by floods accentuates the movement for the regulation of river flow by additional bank and levee protection below, and diversion storage and control of the flood waters above, and their utilization for beneficial purposes in the reclamation of arid and swamp lands, and development of water power, instead of permitting the floods to continue, as heretofore, agents of destruction.

We hold that the control of the Mississippi River is a national problem. The preservation of the depth of its waters for purposes of navigation, the building of levees and works of bank protection to maintain the integrity of its channel and prevent the overflow of its valley, resulting in the interruption of interstate commerce, the disorganization of the mail service and the enormous loss of life and property, impose an obligation which alone can be discharged by the National Government.

We favor the adoption of a liberal and comprehensive plan for the development and improvement of our harbors and inland waterways with economy and efficiency, so as to permit their navigation by vessels of standard draught.

**ALASKA**

It has been and will be the policy of the Democratic party to enact all laws necessary for the speedy development of Alaska and its great natural resources.

**TERRITORIES**

We favor granting to the people of Alaska, Hawaii and Porto Rico the traditional Territorial Government accorded to all Territories of the United States since the beginning of our Government and we believe the officials appointed to administer the Government of these several Territories should be qualified by previous bona-fide residence.

**CANDIDATES**

We unreservedly indorse our President and Vice-President, Woodrow Wilson of New Jersey, and Thomas Riley Marshall of Indiana, who have performed the functions of their great offices faithfully and impartially and with distinguished ability.

In particular we commend to the American people the splendid diplomatic victories of our great President, who has preserved the vital interests of our Government and its citizens and kept us out of war.

Woodrow Wilson stands to-day the greatest American of his generation.

**CONCLUSION**

This is a critical hour in the history of America, a critical hour in the history of the world. Upon the record above set forth, which shows great constructive achievement in following out a consistent policy for our domestic and internal development; upon the record of the Democratic Administration, which maintained the honor, the dignity, and the interests of the United States and at the same time retained the respect and friendship of all the nations of the world, and upon the great policies

for the future strengthening of the life of our country, the enlargement of our national vision and the ennobling of our international relations, as set forth above, we appeal with confidence to the voters of the country.

### III. POST-CONVENTION CAMPAIGNS

**REPUBLICAN POST-CONVENTION CAMPAIGN.** Mr. Hughes lost no time in entering upon the active work of the campaign. As soon as he had been notified of his nomination he sent a letter to President Wilson resigning his position on the Supreme Court bench, and this was at once accepted. He came to New York City following this, and consulted with the leaders of the party in laying out the broad lines of the campaign. On June 27th William R. Willcox, former postmaster of New York City, was chosen chairman of the Republican national committee to manage the campaign. Cornelius N. Bliss, Jr., was chosen treasurer. On the following day Mr. Hughes and Colonel Roosevelt dined together and had a long conference in regard to campaign issues and plans. Colonel Roosevelt expressed satisfaction at the end of this interview, and put an end finally to any doubts as to whether he would support Mr. Hughes.

On July 31st Mr. Hughes was officially notified of his nomination. In a speech he severely scored the Wilson administration.

The most notable portions of his address follow:

"We desire that the Republican party as a great liberal party shall be the agency of national achievement, the organ of the effective expression of dominant Americanism. What do I mean by that? I mean America conscious of power, awake to obligation, erect in self-respect, prepared for every emergency, devoted to the ideals of peace, instinct with the spirit of human brotherhood, safeguarding both individual opportunity and the public interest, maintaining a well-ordered constitutional system adapted to local self-government without the sacrifice of essential national authority, appreciating the necessity of stability, expert knowledge and thorough organization as the indispensable conditions of security and progress; a country loved by its citizens with a patriotic fervor permitting no division in their allegiance and no rivals in their affection—I mean America first and America efficient.

"The dealings of the administration with Mexico constitute a confused chapter of blunders. We have not helped Mexico. She lies prostrate, impoverished, famine-stricken, overwhelmed with the woes and outrages of internecine strife, the helpless victim of a condition of anarchy which the course of the administration only served to promote. For ourselves, we have witnessed the murder of our citizens and the destruction of their property. We have made enemies, not friends.

"In the light of the conduct of the administration no one could understand its professions. Decrying interference, we interfered most exasperatingly. We have not even kept out of actual conflict, and the soil of Mexico is stained with the blood of our soldiers. We have resorted to physical invasion, only to retire without gaining the professed object. It is a record which cannot be examined without a profound sense of humiliation.

"The nation has no policy of aggression toward Mexico. We have no desire for any part of her territory. We wish her to have peace, stability and prosperity. . . . We demand from Mexico the protection of the lives and the property of our citizens and the security of our border from depredations. Much will be gained if Mexico is convinced that we contemplate no meddlesome interference with what does not concern us, but that we propose to insist in a firm and candid manner upon the performance of international obligations. To a stable government, appropriately discharging its international duties, we should give ungrudging support. A short period of firm, consistent and friendly dealing will accomplish more than many years of vacillation.

"The chief function of diplomacy is prevention; but in this our diplomacy failed, doubtless because of its impaired credit and the manifest lack of disposition to back words with action. Had this government by the use of both informal and formal diplomatic opportunities left no doubt that when we said 'strict accountability' we

meant precisely what we said, and that we should unhesitatingly vindicate that position, I am confident that there would have been no destruction of American lives by the sinking of the *Lusitania*.

"It is a great mistake to say that resoluteness in protecting American rights would have led to war. Rather, in that course lay the best assurance of peace.

"We denounce all plots and conspiracies in the interest of any foreign nation. Utterly intolerable is the use of our soil for alien intrigues. Every American must unreservedly condemn them, and support every effort for their suppression. But here, also, prompt, vigorous, and adequate measures on the part of the administration were needed. There should have been no hesitation; no notion that it was wise and politic to delay.

"It is apparent that we are shockingly unprepared. There is no room for controversy on this point since the object lesson on the Mexican border. All our available regular troops (less, I believe, than 40,000) are there or in Mexico, and as these have been deemed insufficient the entire National Guard has been ordered out; that is, we are summoning practically all our movable military forces in order to prevent bandit incursions.

"In the demand for reasonable preparedness the administration has followed, not led. Those who demanded more adequate forces were first described as 'nervous and excited.'

"Later, under the pressure of other leadership, this attitude was changed. The administration, it was said, had 'learned something,' and it made a belated demand for an increased army.

"It seems to be plain that our regular army is too small. We are too great a country to require of our citizens who are engaged in peaceful vocations the sort of military service to which they are now called. As well insist that our citizens in this metropolis be summoned to put out fires and police the streets.

"There should be not only a reasonable increase in the regular army, but the first citizen reserve subject to call should be enlisted as a Federal army and trained under Federal authority.

"We are deeply interested in what I may term the organization of peace. We cherish no illusions. We know that the recurrence of war is not to be prevented by pious wishes. If the conflict of national interests is not to be brought to the final test of force, there must be the development of international organization in order to provide international justice and to safeguard so far as practicable the peace of the world.

"There should be an international tribunal to decide controversies susceptible of judicial determination.

"We need conferences of the nations to formulate international rules, to establish principles, to modify and extend international law so as to adapt it to new conditions, to remove causes of international differences. We need to develop the instrumentalities of conciliation.

"And behind this international organization, if it is to be effective, must be the cooperation of the nations to prevent resort to hostilities before the appropriate agencies of peaceful settlement have been utilized.

"It is only through international cooperation giving a reasonable assurance of peace that we may hope for the limitation of armaments. It is to be expected that nations will continue to arm in defense of their respective interests, as they are conceived, and nothing will avail to diminish this burden save some practical guaranty of international order.

"When we contemplate industrial and commercial conditions, we see that we are living in a fool's paradise. The temporary prosperity to which our opponents point has been created by the abnormal conditions incident to the war.

"Our opponents promised to reduce the cost of living. This they have failed to do; but they did reduce the opportunities of making a living.

"The Republican party stands for the principle of protection. We must apply that principle fairly, without abuses, in as scientific a manner as possible; and Congress should be aided by the investigations of an expert body. We stand for the safeguarding of our economic independence, for the development of American industry, for the maintenance of American standards of living. We propose that in the competitive struggle that is about to come the American workman shall not suffer.

"We must build up our merchant marine. It will not aid to put the Government into competition with private owners. That, it seems to me, is a counsel of folly.

"We stand for the conservation of the just interests of labor. We do not desire production, or trade, or efficiency in either, for its own sake, but for the betterment of the lives of human beings. We shall not have any lasting industrial prosperity, unless we buttress our industrial endeavors by adequate means for the protection of health; for the elimination of unnecessary perils to life and limb; for the safeguarding of our future through proper laws for protection of women and children in industry; for increasing opportunities for education and training. We should be solicitous to inquire carefully

into every grievance, remembering that there are few disputes which cannot easily be adjusted if there be an impartial examination of the facts. We make common cause in this country, not for a few, but for all; and our watchword must be cooperation, not exploitation. No plans will be adequate save as they are instinct with genuine democratic sympathy.

"I endorse the declaration in the platform in favor of woman suffrage.

"Our opponents promised economy, but they have shown a reckless extravagance. They have been wasteful and profligate. It is time that we had fiscal reform. We demand a simple business-like budget. I believe it is only through a responsible budget, proposed by the executive, that we shall avoid financial waste and secure proper administrative efficiency, and a well-balanced consideration of new administrative proposals."

Mr. Hughes had dealt, as will be noted in this speech, with the subject of woman suffrage. On the day following the deliverance of the speech he supplemented his remarks by another statement, in which he made it clear that he had not gone further in his former address because he felt constrained at that time to speak only of matters set forth in the party platform. In his supplementary statement he declared his support of the Anthony amendment to the Constitution, providing for national woman suffrage.

"I see nothing but danger to our security, to our unity, to our proper attitude toward political questions in continual agitation of the subject; and I would take the shortest cut to this solution.

"I further believe that it is a matter affecting the whole country. It is one of those matters where we must have a uniform policy. The country must decide on what that policy must be. I have indicated my belief as to what it should be; but it is a question that affects the whole country—the composition of our electorate; and therefore I believe that the Federal amendment should be submitted and should be ratified."

Several days after the delivery of his speech of acceptance Mr. Hughes began his first speaking tour, which occupied a month, and took him through 17 States from East to West. His first address was delivered in Detroit, and was followed by addresses in Chicago, St. Paul, Fargo, N. D., and other cities and towns in the Western States. In each of these addresses Mr. Hughes vigorously attacked the Wilson administration on the grounds of waste, extravagance, sectionalism, unfit appointments, violation of civil service principles, and a weak foreign policy. In connection with the civil service Mr. Hughes made the charge that E. Dana Durand, former head of the Census Bureau, had been forced out of his position because it was wanted for a Democrat. This charge was promptly denied by Secretary Redfield, who maintained that Mr. Durand had retired voluntarily. On the following day Mr. Hughes read a letter from Mr. Durand himself, in which the latter declared that the charge was true, and that he had been forced to resign, because the administration wished to create a vacancy.

In an address delivered at Kansas City, on September 1st, Mr. Hughes pleaded for a larger army and navy. He spoke at St. Louis on September 2nd, declaring arbitrary legislation "a surrender of principle to force." This allusion was directed toward the passage at Mr. Wilson's insistence of the so-called Adamson law. On September 1st he spoke at Syracuse, N. Y.,

urging the protection of labor by new tariff legislation. September 5th he spoke at Lexington, Ky., and Cincinnati, Ohio, where he again took up the subject of railroad legislation.

On September 7th he opened an Eastern speaking tour in Maine, where he was well received. Following this he made another tour of the middle Western States, including Illinois, Wisconsin, and Indiana. The speeches which he made on this tour were devoted chiefly to the Adamson eight-hour law, and the manner of its passage through Congress, and to severe criticisms of the Mexican policy of the administration. At Springfield, Ill., he criticized the Adamson law as follows:

"Manifestly we have here an extremely intricate question of rates and outlays. What was the manifest duty of the executive? Plainly to insist that investigation should precede action, and that nothing should be yielded to force. Not only did the administration fail to take proper action on its own initiative, but the business men of the country appealed in vain to the administration for investigation. Their request won no favorable action.

"I stand for the principle of arbitration in industrial disputes. Labor, least of all, can afford to have that principle surrendered. It is a civilized method, as opposed to the injurious contests of force, which impoverish labor and imperil the social order. The essence of the matter is a fair and reasonable hearing of all parties concerned and a just determination according to the facts. To say that fair and prompt arbitration could not have been had in this case is to indict both the administration and the American people.

"When force is proposed and arbitration is refused there is but one stand to take, and that is to appeal to the judgment of the country to vindicate the processes of reason. Had the Executive, when arbitration was declined, at once directed the entire force of public opinion, as he easily could, to the demand for the recognition of the principles of arbitration, I have no doubt he would have won, and the nation would have been his debtor.

"Had the Executive gone at once to Congress for immediate authority to secure prompt and thorough investigation of the strikers' grievances in advance of action, and had he thus made instant provision for an inquiry so entirely competent as to command the respect of the country, I am satisfied there could have been no strike. We are still ruled by public opinion, and no administration need fear results if it stands firmly for essential principles.

"Contrast the action of this administration with what Grover Cleveland in 1886 said with respect to labor legislation—'All legislation on the subject should be calmly and deliberately undertaken, with no purpose of satisfying unreasonable demands or gaining partisan advantage.'

"It is idle to excuse the action taken on the Adamson bill by a request for additional legislation with respect to the future. That legislation was not obtained. We are dealing with what was demanded and actually enacted.

"We have an unjustifiable attempt to use public sentiment with respect to another eight-hour workday in order to justify a bill which does not provide another eight-hour workday, but relates solely to an increase in wages. We have seen the choice of what seemed to be the easier way, which escaped the necessity of a determined stand for principles. We have seen what has appeared to be the consideration of immediate political expediency at the expense of public welfare."

Mr. Hughes's criticisms on the administration's course in Mexico may be summarized in the address which he delivered at Richmond, Ind.:

"I have only recently received this authentic information of the actual instructions that were given with respect to the Government of Mexico. John Lind was authorized by the Executive to state this proposition to a minister of another government, and this is the authorized instruction: 'Huerta will be put out if he does not get out; that it is the preference of the President that it should be accomplished by domestic means if possible, but if it cannot be done by domestic means other means adequate for the purpose will be resorted to.'

"There is no basis for that in the recognition of the sovereignty of our neighbors. There is no basis for that in a true and correct American policy. We departed from American policy and left our citizens to suffer from

the barbarities which resulted when all government was destroyed and anarchy was supreme in Mexico.

"We were promised in the platform of our opponents of four years ago that the constitutional rights of American citizens should protect them on our borders and go with them throughout the world and every American citizen holding or having property in any foreign country should have the full protection of the United States government both for himself and for his property.

"On the contrary, we have seen American rights abused. We have seen American lives lost, property destroyed and commerce interfered with. There was one clear duty for the American administration in connection with Mexico. That was the protection of American lives and American property; at all events, that was a clear and understandable duty leading to the straight path of administrative action without the shadow of turning. But instead of that there was meddling with Mexican affairs which Mexico could not understand and which cost us their friendship and respect.

"I do not speak of the question whether Huerta should or should not have been recognized. That is a matter which presents a false issue. If the administration had felt on the information it had that he had a stable government and could perform international duties then it could properly have recognized him.

"If, on the other hand, it was satisfied that he did not perform the international obligations of Mexico, then it was competent to refuse recognition. But the one thing which was not proper and which had no basis was to conduct a personal war on Huerta for his extermination from Mexican politics. Yet that was what was done.

"The great duty of protecting American lives and property was left unperformed while an unofficial spokesman was sent to Huerta to inform him not simply that he would not be recognized, but that he must eliminate himself from Mexican politics. He was told by this unofficial spokesman that he could not even be a candidate at a Mexican election.

"Yet the truth is that we did intermeddle with those affairs in a way which forfeited to us the esteem that we should have enjoyed, and finally resulted in leaving Mexico to the ravages of revolution, without protection of our citizens or the citizens of any other country. We left them to an anarchy which was indescribable and to atrocities which will not bear repetition in polite society.

"There is one way and one clear way to secure the respect of Mexico and of every other nation and to maintain our prestige and our influence; one way to be really helpful, and that is for America to recognize the just demands of American citizenship and protect American lives and property throughout the world, and I stand here to say that, so far as I am concerned, I shall to the utmost of my powers maintain American rights on land and sea throughout the world with respect to all nations, as to American lives, American property and American commerce."

In the Pennsylvania steel district on September 27th, Mr. Hughes emphasized a plea for a protective tariff, and announced on September 29th that he favored the eight-hour working day, providing a thorough investigation was made of its application before it was put into effect. At Buffalo, N. Y., on September 30th, he declared that the Democratic administration had blocked American trade abroad despite its professing to aid it, and cited, as examples, the opposition to the bankers' participation in the six-power loan to China and the administration's action in Mexico.

The election held in Maine on September 7th resulted in the success of the Republican ticket by a plurality which seemed to assure the reunion of the Progressive and Republican parties in that State. This result greatly cheered the Republican leaders, because the campaign up to this time had been devoid of any great enthusiasm. Mr. Hughes's speeches, while they were well received by most audiences, seemed to lack fire and vigor. A very general "slump" had characterized the Republican campaign. Prior to the passage of the Adamson law the chief issue urged by the Republican speakers, including Mr. Hughes, was the weakness of President Wilson's foreign policy toward Mexico and toward the warring countries in Eu-

rope. The passage of this measure, however, gave them a new issue of which they were not slow to take advantage, and for the rest of the campaign the most aggressive attacks upon Mr. Wilson were directed against the eight-hour law.

The much-heralded pro-German support of Mr. Hughes did not materialize. His frank criticism of the failure of President Wilson to insist on a strict observance of international law as regards Germany and other similar criticisms quickly alienated the support of the aggressive pro-German propagandists, so that little was heard from them during the campaign.

Colonel Roosevelt delivered his first speech in the campaign at Lewiston, Maine, on August 31st, and following that date he took an active part in it both by speaking and by writing. In his Lewiston speech he vigorously attacked President Wilson and the policies of his administration, assailing chiefly the Mexican policy, which he declared had produced "a bloody peace in Mexico." He also attacked the administration for its "safety-first policy," following the invasion of Belgium. He said:

"During the last two years we have seen an evil revival in this country of non-American and anti-American divisions along political-racial lines; and we owe this primarily to the fact that President Wilson has lacked the courage and vision to lead this nation in the path of high duty and by this lack of affirmative leadership has loosened the moral fibre of our people, has weakened our national spirit, and has encouraged the upgrowth within our own borders of separatism along the lines of racial origin."

On September 30th, Mr. Roosevelt made an aggressive attack on President Wilson's administration in an address delivered at Battle Creek, Mich. He concerned himself, as usual, with the President's Mexican and foreign policies. In this address, however, he added criticisms of the eight-hour law. In connection with Mexico, Mr. Roosevelt asserted that the President had shown inconsistency by refusing to recognize Huerta because of the manner in which he had attained power, and at the same time recognizing Colonel Benavides, in Peru, who, he claimed, had reached the presidency by the same means which Mr. Wilson denounced in the case of Huerta.

In relation to the eight-hour law, Mr. Roosevelt declared with great emphasis that it was not a question of hours of labor, but a question of wages. He also outlined what, in his opinion, the President should have done as follows:

"There was but one course that could rightly have been taken, and that the perfectly simple course. The President had ample knowledge. He had many weeks in which to secure proper action by the parties to the controversy; and if either would not agree to such action, he had ample time in which to get Congress to give him any power necessary in order to deal thoroughly and without difficulty with the situation. If the regular board of mediation and conciliation was inadequate, he should have at once appointed a special commission, which would have included men thoroughly acquainted with the situation from the wage earners' standpoint, possessed of an understanding sympathy with the wage earners, and incapable of being bullied or of being influenced in any improper manner. The President should have insisted that every matter be laid before this committee of arbitration, and nothing withheld. The commission would have dealt in thoroughgoing and satisfactory fashion with all the various questions involved—all of which are interrelated and interdependent. It would have dealt with the question of an eight-hour day, and with the complicated question of the amount of wages to be paid for that day and for overtime in the various positions. It

would also have dealt with the question as to whether this necessarily meant an increase of rates. As an incident to this it would have had to take up the question of securing just remuneration to the property holders; and therefore it would have had to deal with any questions of recent over-capitalization; for although I do not believe it would be wise to take up old cases of over-capitalization (where grave injustice to innocent people would be caused by any action) any recent instances of over-capitalization should be accepted as having been gone into after full notice and with full knowledge, and should be punished accordingly.

"Pending the decisions of the commission, it should have been made clear that the President would permit no interference with the traffic which is essential to the life of the commonwealth; that there should be no stoppage of the arteries of circulation in the body politic and social; and that rather than see such a stoppage the government would itself run the trains if necessary, until such time as the commission could report. When the commission's report was made, it would have become the duty of the government to see that it was put into effect, and in case of any controversy itself to interpret and apply the rules. That was the course demanded by courage and honor; and that was the course demanded by every man to whom Americanism was a fact, and not an empty phrase."

On October 8th, Mr. Hughes started on his third campaigning tour. Speaking in Philadelphia on that date, he declared that Republicans would not tolerate interference with American commerce or mail. In Baltimore, on the following day, he declared that he would not meddle in foreign affairs, when they did not concern him, but would insist on the rights of Americans everywhere. He declared that President Wilson had hurt business by failing to protect American enterprise in other lands, notably Mexico.

In a speech delivered at Louisville, on October 12th, Mr. Hughes made the most definite and significant statement that had come from him on the proper attitude of the United States toward Germany. Although he had previously criticized the policies adopted by Mr. Wilson toward the German situation, his criticism had been in general terms. He had failed to state what he himself would have done in similar circumstances. For example, in the speech delivered in Philadelphia on October 9th, he said: "I repeat what I said in my speech of acceptance that had this government left no doubt that when we said 'strict accountability' we meant precisely what we said, and that we should unhesitatingly vindicate that position, I am confident that there would have been no destruction of American lives by the sinking of the *Lusitania*."

During the course of the address in Louisville one of Mr. Hughes's auditors inquired what he would have done about the *Lusitania*. He replied promptly that he would at once have broken off diplomatic relations with Germany if the German government had disregarded the protest he would have made after the warning against sailing on the *Lusitania* first appeared in the papers. He continued: "I have said that I would have had the State Department equipped so as to command the respect of the world at the outset of the administration, and next, I would have so conducted affairs in Mexico as to show that our words meant peace and good-will, the protection at all events of the lives and property of American citizens; and next, when I said 'strict accountability' every nation would have known that that was meant, and further, when notice was published with respect to the action, I would have made it known in terms unequivocal and unmistakable that we should not tolerate a continuance of

friendly relations through the ordinary diplomatic channels if that action were taken, and the *Lusitania* would never have been sunk."

At Lincoln, Neb., on October 14th, Mr. Hughes repudiated the charge that "a vote for Hughes means a vote for war." He made five speeches in Nebraska on October 16th, and on the following night a series of speeches in Iowa. In Sioux City, Iowa, he was asked by one of his auditors whether if elected president he would repeal the Adamson law. He replied, "You cannot repeal the surrender or abdication of authority."

While Mr. Hughes was touring the Middle West in the middle of October, Colonel Roosevelt visited the Mexican border States, and made a number of aggressive speeches, chiefly on the Mexican situation. He attacked the administration as cowardly and declared that of all the foreigners resident in Mexico, Americans and Japanese were most frequently plundered and killed. He declared that the best policy to be followed in relation to Mexico would have been the one followed by the United States in Cuba, that is, the occupation of the country by an American army, and the regeneration of the country by American methods. In his speech at Phenix, Ariz., he compared the conditions of Mexico with those in the Balkans. Colonel Roosevelt was received with the greatest enthusiasm in the course of these addresses.

Mr. Roosevelt continued his tour and visited Denver, where, on October 24th, he made a remarkable speech, in which he belittled the importance and effectiveness of the legislation passed by the Sixty-fourth Congress. On October 26th, he denounced the disloyalty of "professional" German-Americans before a large audience in Chicago. Returning to New York, he spoke on October 28th in Brooklyn, where he denounced the President for saying that in future great wars America would be unable to stay neutral.

Following his tour in the Middle West, Mr. Hughes spoke in New York City on October 24th. He declared that he wanted the support of no man "to whom the interest of this nation is not supreme," and indignantly repudiated the charge made by Democratic speakers that he had entered into a secret deal to obtain the vote of the so-called "hyphen" element. He addressed 10,000 persons in Boston on October 26th, and on the following day made an address in Rochester, N. Y. On October 29th Mr. Hughes gave out a statement of the things that he would stand for as President. He declared that his aims were: to be the administrative head, not a political leader such as Wilson, to appoint an able cabinet, to safeguard capital and labor interests by a protective tariff, to keep a strict but just oversight over business, and encourage business expansion on sound lines at home and abroad, to adopt a firm foreign policy, and defend American rights. This statement was given out during the course of an address in Columbus, Ohio.

The last week of October Mr. Hughes spent in New England and New York. He spoke on October 26th before an audience of working men in Hartford, Conn. In Boston he promised his hearers he would appoint "the ablest cabinet the country can supply," if he should be elected. He said also that in his opinion the privilege of American citizenship included the right to

be protected in any part of the world, but the authority of the United States could not be withheld at the pleasure of the government, but must be maintained under all circumstances. In the two succeeding days he made speeches in Utica and Rochester. In the former city he declared that a vote for the national Republican ticket was a vote for peace, since peace could only be secured by upholding the self-respect and prestige of the nation. Following these addresses he went to the Middle West for a series of final speeches in Ohio and Indiana.

Mr. Hughes ended his active participation in the campaign at a final Republican rally in New York City. An audience of 15,000 persons greeted him in Madison Square Garden. Prior to the meeting a parade of 70,000 Republicans carrying torches had passed up Fifth Avenue. In his address Mr. Hughes defended the right of American citizens who differed with the President to criticize the foreign policy of the administration. He denied that he favored war, and insisted that the only danger of war came from the President's failure to stand firmly for American rights. He urged a return to the protective tariff on the ground that "where there is a difference of labor costs against us the products abroad seeking this market will be sold, either to the disadvantage of American products, or the wages of American labor will be reduced." He declared that it was of no avail to ask Americans to develop the resources of backward countries if they were to be denied the protection of the American flag to which their citizenship entitled them. Following this address Mr. Hughes spoke before many other audiences in the city. At a meeting in Union Square former President Taft also spoke.

In the last days of October Colonel Roosevelt made a remarkable tour of the far Western States. In an address in Denver on October 21st, he placed emphasis on certain domestic policies upon which the Progressive party laid great stress in 1912, but which had largely dropped out of sight. He charged President Wilson with having neither enforced nor modified the Sherman Anti-Trust law, which he declared was negative and hostile to the progress of trade and industry. He declared himself in favor of the Progressive remedy for the evils of big business: regulation rather than suppression. He also advocated a vigorous use of the Federal taxing power and control of interstate commerce to secure an adequate standard of living for working men and working women. He praised the spirit of cooperation and public interest in the welfare of the individual which had given Germany such strength, and warned his hearers that without industrial organization the United States could not compete with European countries of superior collective efficiency. In his speech in Chicago on October 26th he denounced the disloyalty of "professional" German-Americans. In a speech in Brooklyn on October 28th he scored President Wilson for saying that in future great wars America would not be able to remain neutral.

On November 2nd, Colonel Roosevelt spoke before a large audience in Cleveland, Ohio, laying special stress on the alleged failure of the Wilson administration to protect American lives on the high seas and in Mexico. His last speech was delivered at Cooper Union on No-

vember 4th. In this he denounced President Wilson "as another Buchanan," and urged his hearers to follow the example of the men of 1860, who exchanged Lincoln for Buchanan. He accused the President of having adroitly and cleverly and with sinister ability appealed to all that is weakest and most unworthy of the American character.

**THE PROGRESSIVE POST-CONVENTION CAMPAIGN.** It was stated in discussing the Progressive national convention that Colonel Roosevelt, when he refused conditionally to accept the presidential nomination, promised to write to the members of the national committee when he had decided whether he could accept Mr. Hughes as a candidate. Following the dinner with Mr. Hughes noted above, Colonel Roosevelt on June 20th sent to the national committee a letter which was in effect his farewell to the party for whose formation he had been responsible. He said: "Our loyalty is to the fact, to the principles, to the ideal, and not merely to the name, and least of all to the party name. . . . With all my heart I shall continue to work for these great ideals. . . . The people under existing conditions are not prepared to accept a new party." He counseled his fellow-Progressives in the face of this fact, as follows:

"It is impossible for us Progressives to abandon our convictions, but we are faced with the fact that as things actually are, the Progressive national organization no longer offers the means whereby we can make these convictions effective in our national life. Under such circumstances our duty is to do the best we can, and not to sulk because our leadership is rejected. That we ourselves continue to believe that the course we advocated was in the highest interest of the American people is aside from the question. It is unpatriotic to refuse to do the best possible because the people have not put us in a position to do what we regard as the very best. It remains for us good humoredly and with common sense to face the situation and to endeavor to get out of it the best that it can be made to yield from the standpoint of the interests of the nation as a whole."

Mr. Roosevelt declared that the best interests of the country demand "the alignment under the leadership of the forces opposed to the continuance in power of Mr. Wilson and the Democratic party." He asserted that the present administration had been guilty of shortcomings more signal than those of any administration since the days of Buchanan. He asserted indeed "that no administration in our history has done more to relax the spring of the national will and to deaden the national conscience." Such an alignment, he asserted, was possible under Mr. Hughes, whom he regarded as a man whose public record was a guarantee that he would not only stand for such a programme before election, but would "resolutely and in good faith put it through if elected." For this reason he would "strongly support Mr. Hughes."

Mr. Roosevelt then proceeded to arraign the Wilson administration and to praise warmly the Republican candidate. He said: "Mr. Hughes has shown in his career the instinct of efficiency which will guarantee that under him the government will once more work with vigor and force. He possesses that habit of straight-

forward thinking which means that his words will be correlated with his deeds and translated into facts. His past career is the warrant for our belief that he will be the unfaltering opponent of that system of invisible government which finds expression in the domination of the party boss and the party machine. His past career is a guarantee that whatever he says before election will be made good by his acts after election. Morally his public record shows him to be a man of unbending integrity; intellectually it shows him to be a man of honest and trained ability. We have the alternative of continuing in office an administration which has proved a lamentable failure or putting into office an administration which we have reason to believe will function with efficiency for the interest and honor of all the people. I hereby bespeak my Progressive friends their ungrudging support for Mr. Hughes."

This letter marked the practical elimination of the Progressive party as a factor in national politics, at least during this campaign. It was to a larger extent than ever before in the history of political parties a personal party, and its continuance as a party depended entirely upon Colonel Roosevelt. There was, however, little disposition on the part of Progressives to criticize him for his reentrance into the Republican party, for it was realized that he acted from the highest motives, and that his sole purpose was to bring about the success of Republican policies which he advocated, and the defeat of President Wilson and those policies to which he was so bitterly opposed.

On June 26th the national committee of the Progressive party placed the name of Charles E. Hughes at the head of their ticket, in place of Theodore Roosevelt. No other action was possible following the letter from Mr. Roosevelt declining to accept the nomination. The more radical members of the committee offered to substitute the name of Victor Murdock, of Kansas, in place of Mr. Roosevelt. This was lost by a vote of 31 to 15. The vote to endorse Mr. Hughes was 26 to 6. The majority of the Progressive leaders in all parts of the country agreed to this action of the national committee, and promised their warmest support to the candidacy of Mr. Hughes. A few local organizations refused to abide by the action of the committee, and the Democratic party at once set measures on foot to win their support for President Wilson. Mr. McCormick, chairman of the national committee, asserted that he was confident of "sufficient Progressive support to make the reelection of President Wilson certain."

There were attempts on the part of certain Progressive leaders following the action of the national committee to refuse to endorse the candidacy of Mr. Hughes. New Jersey, at the meeting of the State committee, rejected the candidate of the Republicans. The chief opposition, however, came from the Southern Progressives, a majority of whom were never in the Republican party. The leader of this opposing element was John M. Parker, of Louisiana, the Progressive nominee for vice-president. He issued a call for a new convention for August 5th, to nominate an independent ticket. In his statement he set forth the reasons why Progressives should repudiate the endorsement of Mr. Hughes. He said:

"Earnest, patriotic and able men from every State in the Union worked to bring about a radical change which would enable the West and particularly the South to handle their own problems, develop, as they would do, amazingly, and take a virile part in national life.

"I joined the Progressive party from a deep-seated conviction that it stood for what was best for humanity, best for my country, best for my State, and best for the people of the South. To-day my views are stronger than ever that I was absolutely right.

"I did not want office then, and I do not want office now, and my appeal to the men and women of America and of every individual State is to call another convention to meet in Chicago on August 5, the fourth anniversary of the Progressive party, to nominate candidates for President and Vice-President, and let me labor in the ranks and on the stump to prove my loyalty for the purpose I believe in, and not for office elective or appointive."

The convention of the radical leaders of the party was held on August 3rd at Indianapolis, where plans for the reorganization and perpetuation of the Progressive party as a national political organization were made. The convention decided against the reassembling of the party for a national convention to fill the vacancy on the national ticket caused by the action of Colonel Roosevelt in declining the nomination for President. It was decided instead to put up an electoral ticket, bearing the name of Mr. Parker for Vice-President in every State where an organization was left, in the hope of perhaps nominating enough presidential electors who might have the balance of power in the event of a close contest between the two parties. The endorsement of Mr. Hughes was severely criticized by the party leaders. In spite of this action, however, the party as a whole did not take an active place in any of the States as a political factor, and carried no electoral votes.

On October 14th, John M. Parker accepted the Progressive nomination for the office of Vice-President. In his address of acceptance he virtually admitted that owing to the action of the party leaders in endorsing the Republican ticket, his candidacy was little more than a farce. His speech was divided between a vitriolic attack upon Colonel Roosevelt, Mr. Perkins, and other Progressives who had become identified with the Republicans, and a eulogy upon the progressive administration of Mr. Wilson. He promised to make an aggressive campaign for the Democratic candidate.

In not more than half a dozen States in the Union did Progressive electors appear on the ballot independently of other party tickets, and practically every attempt of the anti-fusionist Progressives to obtain a full national ticket failed.

**DEMOCRATIC POST-CONVENTION CAMPAIGN.** Immediately after the notification that he had been nominated, President Wilson on June 15th, appointed Vance C. McCormick, once Democratic and Progressive candidate for Governor of Pennsylvania, chairman of the Democratic national committee, and preparations were at once begun by Mr. McCormick to carry on an aggressive campaign. Mr. Wilson himself decided to make no campaign tours, but to remain quietly in his summer home, "Shadow Lawn," Long Branch, N. J. There was little activity in the Democratic campaign until President Wilson had been formally notified of his re-nomination. This was done on September 2nd at Shadow Lawn.

The most striking portions of his speech of acceptance are given herewith:

"I do not doubt that the people of the United States will wish the Democratic party to continue in control of the government. . . .

"Alike in the domestic field and in the wide field of the commerce of the world, American business and life and industry have been set free to move as they never moved before.

"The tariff has been revised, not on the principle of repelling foreign trade, but upon the principle of encouraging it. . . . and a tariff board has been created whose function it will be to keep the relations of America with foreign business and industry under constant observation, for the guidance alike of our business men and of our Congress. American energies are now directed toward the markets of the world.

"The laws against trusts have been clarified by definition, with a view to making it plain that they were not directed against big business, but only against unfair business and the pretense of competition where there was none, and a trade commission has been created with powers of guidance and accommodation which have relieved business men of unfounded fears and set them upon the road of hopeful and confident enterprise.

"By the Federal Reserve Act the supply of currency at the disposal of active business has been rendered elastic. . . .

"Effective measures have been taken for the recreation of an American merchant marine and the revival of the American carrying trade. . . . For the farmers of the country we have virtually created commercial credit by means of the Federal Reserve Act and the Rural Credits Act. . . . By an intelligent warehouse act we have assisted to make the standard of crops available as never before both for systematic marketing and as a security for loans from the banks. . . . The workmen of America have been given a veritable emancipation by the legal recognition of a man's labor as part of his life and not a mere marketable commodity, by exempting labor organizations from processes of the courts which treated their members like fractional parts of mobs and not like accessible and responsible individuals, by releasing our seamen from involuntary servitude, by making adequate provision for compensation for industrial accidents, by providing suitable machinery for mediation and conciliation in industrial disputes and by putting the Federal Department of Labor at the disposal of the workman when in search of work.

"We have effected the emancipation of the children of the country by releasing them from hurtful labor. We have instituted a system of national aid in the building of highroads such as the country has been feeling after for a century. We have sought to equalize taxation by means of an equitable income tax. . . . We have provided for national defense upon a scale never before seriously proposed upon the responsibility of an entire political party. We have driven the tariff lobby from cover and obliged it to substitute solid argument for private influence.

"This extraordinary recital must sound like a platform, a list of sanguine promises, but it is not. It is a record of promises made four years ago and now actually redeemed in constructive legislation. . . .

"The rights of our own citizens became involved; that was inevitable. Where they did, this was our guiding principle—that property rights can be vindicated by claims for damages when the war is over, and no modern nation can decline to arbitrate such claims, but the fundamental rights of humanity cannot be. The loss of life is irreparable. Neither can direct violations of a nation's sovereignty await vindication in suits for damages. . . .

"The passions and intrigues of certain active groups and combinations of men among us who were born under foreign flags injected the poison of disloyalty into our own most critical affairs, laid violent hands upon many of our industries and subjected us to the shame of divisions of sentiment and purpose in which America was forgotten. It is part of the business of this year of reckoning and settlement to speak plainly and act with unmistakable purpose in rebuke of these things, in order that they may be forever hereafter impossible. I am the candidate of a party, but I am above all things else an American citizen. I neither seek the favor nor fear the displeasure of that small alien element among us which puts loyalty to any foreign power before loyalty to the United States. . . .

"The Mexican people are entitled to attempt their liberty. . . . and so long as I have anything to do with the action of our great government I shall do everything in my power to prevent any one standing in their way. . . . The unspeakable Huerta betrayed the very comrades he served, traitorously overthrew the government of which he was a trusted part, impudently spoke for the very forces that had driven his people to the rebellion with which he had pretended to sympathize. The men who overcame him and drove him out represent at least the fierce passion of reconstruction which lies at the very heart of liberty, and so long as they represent,

however imperfectly, such a struggle for deliverance I am ready to serve their ends when I can. . . . Mistakes I have no doubt made in this perplexing business, but not in purpose. . . .

"There must be a just and settled peace, and we here in America must contribute the full force of our enthusiasm and of our authority as a nation to the organization of that peace upon world-wide foundations that cannot easily be shaken. No nation should be forced to take sides in any quarrel in which its own honor and integrity and the fortunes of its own people are not involved, but no nation can any longer remain neutral as against any willful disturbance of the peace of the world. . . .

"The nations of the world must unite in joint guarantees that whatever is done to disturb the whole world's life must first be tested in the court of the whole world's opinion before it is attempted. . . .

"Besides contributing our ungrudging moral and practical support to the establishment of peace throughout the world, we must actively and intelligently prepare ourselves to do our full service in the trade and industry which are to sustain and develop the life of the nations in the days to come.

"We have already been provident in this great matter and supplied ourselves with the instrumentalities of prompt adjustment. . . . It will only remain for the masters of enterprise among us to act in energetic concert and for the Government of the United States to insist upon the maintenance throughout the world of those conditions of fairness and of even-handed justice in the commercial dealings of the nations with one another upon which, after all, in the last analysis, the peace and ordered life of the world must ultimately depend. . . .

"We believe that the day of little Americanism, with its narrow horizons, when methods of 'protection' and industrial nursing were the chief study of our provincial statesmen, are gone and that a day of enterprise has at last dawned for the United States, whose field is the wide world.

"We hope to see the stimulus of that new day draw all America, the republics of both continents, on to a new life and energy and initiative in the great affairs of peace. We are Americans for big America and rejoice to look forward to the days in which America shall strive to stir the world without irritating it or drawing it on to new antagonisms. . . . and when all mankind shall look upon our great people with a new sentiment of admiration, friendly rivalry and real affection as upon a people. . . . to whom humanity is dearer than profit or selfish power."

The first speech of his campaign for reelection, made on September 23rd, President Wilson devoted to a defense of the Adamson law, which he strongly justified. He said: "You know that we have been a legalistic people. I say with due respect to some men for whom I have a high esteem that we have been too much under the guidance of the lawyers, and the lawyer has always regarded the relations between the employer and the employee as merely a contractual relationship, whereas it is, while based upon a contract, very much more than contractual relationship. It is a relationship between one set of men and another set of men with hearts under their jackets, and with interests that they ought to serve in common, and with persons whom they love and must support on one side and on the other. Labor is not a commodity, it is a form of coöperation, and if I can make a man believe in me, know that I am just, know that I want to share the profits of success with him, I get ten times as much out of him as if he thought I was his antagonist, and his labor is cheap at any price. That is the human side of it, and the human side extends to this conception. That laboring man is a partner of his employer. If he is a mere tool of his employer he is only serviceable as a tool. His enthusiasm does not go into it. He does not plan how his work shall be done. He does not work upon the business or enterprise as a whole, and wish to coöperate to the success of it as a whole. Human relationships, my fel-

low citizens, are governed by the heart. and if the heart is not in it, nothing is in it."

Making application of this conception of the relationship between the employer and the employee Mr. Wilson declared that when the controversy between the railroad employees and their employers engaged his attention he perceived at once that the principle of the eight-hour day is not arbitrable. He said: "We believe in the eight-hour day because a man does better work within eight hours than he does within an extended day, and that the whole theory of it, a theory which is sustained now by abundant experience, is that his efficiency is increased, his spirit in his work is improved, and the whole moral and physical vigor of the man is added to. This is no longer conjectural; where it has been tried it has been demonstrated. The judgment of society, the vote of every legislature in America that has voted upon it, is a verdict in favor of the eight-hour law." In reply to the railroad executives' assertion that the establishment of the eight-hour law would cost the roads an immense sum of money, he replied: "How do you know how much it would cost you?" and declared that the reasonable thing to do was to create the eight-hour law not because the men demanded it, but because it was right. He promised that if he could obtain authority from Congress he would appoint a commission to observe the results and report upon them, in order that justice might be done to railroads in respect to the cost of the experiment. Summing up the entire matter he said: "This thing ought to have been done, and it had to be done at the time that it was done, so as to bring about the reasonable trial of the eight-hour day, and a careful examination of the results of the eight-hour day."

On September 30th, President Wilson delivered an address before members of the Young Men's League of Democratic Clubs, who visited his home at Shadow Lawn. The speech was received with great enthusiasm. The President attacked the Republican party severely. He reminded his hearers that the Democratic party was the only party in the United States which had survived from the beginning of the government. He made the prediction that the Republican party would meet the fate of the Federalist and Whig parties. His faith in the permanence of the Democratic party and his conviction that the Republican party would pass away were founded on the fact that the Democratic party "is the only party all of whose life has been governed or at any rate inspired by definite principles, an absolute belief in the control of the people, their right to control, their capacity to control their own affairs, and shape them in the common interest." He declared that the Republican party as now composed and led believed in a government by the attorneys of special interests. He paid a warm tribute to the Progressive party, and declared that the Democratic party would do the things which the Progressive party had wanted to do, and could not do because they had not the power. He made the assertion that the Republican party wished merely to get control of the government, and that it consequently had no real principles. He declared that that party would make radical changes in the foreign policies of the United States, if it came into power, and asked

"if they are going to change it in what direction are they going to change it?" This question he answered as follows:

"There is only one choice as against peace, and that is war. Some of the supporters of that party, a very great body of the supporters of that party, outspokenly declare that they want war, so that the certain prospect of the success of the Republican party is that we shall be drawn in one form or other into the embroilments of the European war."

The President further asserted, commenting upon the Federal Reserve act, that in the days of Republican rule the administration of the Treasury of the United States was controlled by Wall Street. He asserted that the Republican leaders and the special interests behind them would be perfectly content with much of the important legislation passed by the Democratic party, including the Federal Reserve act, the tariff board law, and the rural credits law, if they could have the opportunities of the members of the boards created by those acts. In conclusion he said:

"But now you will notice we have returned to the good old days of Mark Hanna in the Republican party. Some of the very gentlemen who were prominent in that odious régime are now at the head of affairs in the management of the Republican campaign. The lieutenants of Mark Hanna have returned to authority, and the lieutenants of Mark Hanna represent the choices, the determinations, and, so much as we can conjecture, the policy of the Republican party. What they want to do is to get control and then determine the policy in private conference. We are not going to be taken into their confidence.

"It would not be wise for them to take us into their confidence. They want to control, possess. Those are the magic words for them. They do not think we have sense enough. They do not think we have coherence enough. They do not think a great body of free people know how to hang together in its own cause, and that a little body of men that always hangs together can in the long run manage the people, and it is up to us to show them that that is impossible. The people of the United States have frequently been fooled, but they are not often fooled several times in the same way, and this barefaced attempt to fool them in the same old way is, in my judgment, one of the most futile things that was ever attempted."

In the first week in October President Wilson made a trip to Omaha, where, on October 5th, he made an address.

In this he replied indirectly to the criticisms of his foreign policy made by Colonel Roosevelt and Mr. Root. He denied that he thought that America should refuse to take an active part in the affairs of Europe, but declared that at the present time he could not see the justification for any intervention in the present conflict. He said in part: "It will take the long inquiry of history to explain this war, but Europe ought not to misunderstand us. We are holding off, not because we do not feel concerned, but because when we exert the force of this nation we want to know what we are exerting it for.

"Nothing that concerns humanity, nothing that concerns the essential rights of mankind, can be foreign or indifferent to us, but in fight-

ting for these things, my fellow countrymen, we want to have a touchstone. We want to have a test. We want to know whenever we act what the purpose is—what the ultimate goal is.

"We want all the world to know that we are ready to lend our force without stint to the preservation of peace in the interests of mankind. What disturbs the light of the whole world is the concern of the whole world, and it is our duty to lend the full force of this nation, moral and physical, to the league of the nations which shall see to it that nobody disturbs without submitting his case first to the opinion of mankind."

Mr. Wilson made addresses also in Indianapolis on October 12th and in Chicago in October 19th. Returning to Shadow Lawn on October 21st he addressed several thousand Pennsylvanians. In this speech he repeated the accusation that the Republican party was still controlled by the reactionary Old Guard, both in the nation and in the State of Pennsylvania. He declared that the new constitution for New York was defeated in 1916 because the voters distrusted the Republican party, who had made it. He made a strong plea for a league of the nations, which would confront an offending nation with the combined power of the rest of the world. He also urged the voters to elect a Democratic congress, as the only way in which his administration could be made effective. In relation to the Sixty-fourth Congress he said: "There is something quite as important as the choice of the chief magistrate. I want you to remember that the real source of action and the real machinery of obstruction are in Congress, not in the presidency. Do you suppose that anything could have been accomplished in the last three and one-half years had there not been a determined and willing majority in the Congress?"

"I have not led these gentlemen; I have gone forward with them. I call your attention to the fact that there is nowhere recorded a single Wilson policy. Everything that I have asked Congress to do was written in the pledges of the party itself. And the only power I have exercised is the power of coöperation, the power that all men exercise when insisting upon the obvious duties of a great hour, when men take heart to do a great thing."

President Wilson, in forcing through Congress the Adamson law, won for himself the support of organized labor in so far as it was represented by its great organizations, and in the middle of October the American Federation of Labor through its labor representation committee issued a public statement to officers of organized labor, strongly favoring President Wilson and a Democratic Congress. The statement read in part as follows:

"Never at any time within the last fifty years have the workers had more at stake in any political campaign than in the one that is to be decided in the election on November 7.

"During the present administration and particularly in this campaign, there has been developed a clear-cut issue between the workers—the producers—and those who manipulate the products of the labor of others—the exploiters.

"During the present administration the organized labor movement has been able to secure recognition for the rights of human beings and opportunity for all to participate in the affairs of the nation in a degree that has never before been accomplished.

"The dignity of human life and the value of the

coöperation of those whose work is necessary to the processes of industry and commerce have been given an important place in considering all problems that concern the nation. This recognition has taken the form of legislation necessary to protect the interests of wage earners and in the ideals that have guided and directed national policies both at home and in our relations with other nations. . . .

"The interests that have been seeking to plunge our country into war not only with European countries but also with Mexico are the interests that are represented by the most selfish and most conscienceless element of Wall Street. These elements have not stopped with an effort to use existing mistakes and wrongs as an excuse for war, and have not hesitated to endeavor to create situations that brought the nation to the very brink of war. It was only by the determined resistance of the citizens who understood that an element of reasonableness was injected into the situation and action prevented until the true facts could be discovered and the will of the masses of the citizens could prevent the evil purposes and designs.

"The American seamen, the last group of workers who could under the law be compelled to perform compulsory service, have been made free men and given the right to quit their ships when in safe harbors. . . ."

Due to the initiative of President Wilson, the Congress extended the United States eight-hour law to include the workmen engaged in the operation of the railroad train service of the country, and a great national strike was averted.

President Wilson again made a speech in the Middle West on October 26th, where in Cincinnati he made a declaration that "this is the last war that involves the world that the United States can keep out of." He gave it as his belief that "the business of neutrality is over" and that "war has now reached such a scale that the position of neutrals sooner or later becomes intolerable."

The last days of his campaign for reelection Mr. Wilson devoted to New York and New Jersey. A Democratic rally was held in Madison Square Garden on November 2nd. Here President Wilson expressed confidence in his reelection and reviewed the conduct of the campaign. He declared that the Republicans in their struggle to get control of the country had dangerously aggravated class divisions, and the prejudices of different national elements of the American people. He defended the eight-hour law, and other measures passed during his administration. The President made several other addresses in New York City. His final address was delivered at Shadow Lawn on November 4th. A portion of this address was devoted to the local campaign in New Jersey. He charged the Republican candidate for governor with being a servant of "invisible government." Turning to national issues, he declared that the tariff was no protection to labor, since high wages were often paid in unprotected industries, and evil conditions prevailed in many industries that had received the benefits of high tariff. He denounced Republican business men for attempting to coerce a Democratic employee, and declared that the small and selfish group of capitalists, who formerly controlled the credit of the country, "now control nothing but the betting."

Surrounded by his family and a few intimate friends, Mr. Wilson awaited the result of the election at Shadow Lawn.

#### IV. THE RESULTS OF THE ELECTION

President Wilson was reelected by the narrowest margin of electoral votes that had determined an election since the Hayes-Tilden campaign of 1876. So close was the result in

several of the States that over a week elapsed before it was finally conceded that he had been elected. On the evening of November 7th, reports came in from all over the country showing that Mr. Hughes had carried what were conceded by both parties to be doubtful States, including New York, Illinois, Indiana, and others. At this time it was generally conceded that Mr. Hughes had been elected, and only the chairman of the Democratic National Committee, Vance McCormick, insisted that later returns would show the reelection of President Wilson. Returns coming in from States hitherto not heard from revealed on November 8th the accuracy of this forecast. The result hinged upon the count of votes in California and Minnesota, which had been regarded as Republican. In the former State, where an enormous vote had been cast on account of the participation of women in the election, returns showed that President Wilson had a lead of about 2000 votes, with a large number of precincts in Los Angeles still to be accounted for. In Minnesota Mr. Hughes had a lead of several hundred votes, and in New Hampshire and North Dakota the votes were so evenly divided that no one could foretell the final result until the last ballot had been accounted for.

The early election returns came largely from the States east of the Mississippi and showed unexpected Republican strength, especially in Illinois and New York. In addition to the States mentioned above, West Virginia and New Mexico were also doubtful, but eventually West Virginia and New Mexico were placed in the Republican column, and the other doubtful States in the Democratic column. The final results from California which decided the election gave the highest Democratic elector 466,289 votes, and the highest Republican elector 462,516 votes. This gave 13 electoral votes to President Wilson, and finally assured his reelection. In Minnesota Hughes received 179,544 votes, and Wilson 179,152, giving the 12 electoral votes of the State to Hughes. In New Hampshire Wilson received 43,779 votes, and Hughes 43,723. As will be noted from the table on page 745, President Wilson received 276 electoral votes, and Mr. Hughes 255. The popular vote cast for President Wilson was 9,116,296, and for Mr. Hughes 8,547,474. Thus President Wilson received 568,822 more votes than Mr. Hughes. It was the largest vote ever cast in the history of American politics. Aside from the natural increase in the vote in the four years from 1912, the fact that women voted in several of the States swelled the total. The total popular vote in 1912 was 15,045,294, while the popular vote cast for Wilson and Hughes in 1916 was 17,663,770.

A notable feature of the election was the falling off in the Socialist vote, which in 1912 amounted to 901,000. This fell in 1916 to 750,000. The vote for Hanly, the Prohibition candidate, was 225,101, compared with 207,928 for Chafin in 1912. The total increase in the popular vote was 3,593,549, which is to be accounted for by the increase in the population and the woman suffrage vote in the new suffrage States.

The result in Congress of the election was to increase considerably in both houses the Republican membership. In the Sixty-fifth Congress, the House of Representatives is composed of 217 Republicans, 212 Democrats, and 6 mem-

bers of other parties; thus the practical control of the House will be in the hands of members of Socialist and independent parties. In the Senate the Democrats retained their majority, which was cut from 14 to 12. Republicans succeeded Democrats in California, Maryland, New Jersey, New York, and West Virginia, and Democrats succeeded Republicans in Delaware, New Mexico, Rhode Island, Utah, and Wyoming. One of the new members elected to the Senate was Governor Hiram Johnson of California. In Indiana two Republican Senators were elected, defeating two Democrats who were candidates for reelection. For the first time in the history of the country a woman was elected to the House of Representatives. This was Miss Jeannette Rankin (q.v.), who was elected on the Republican ticket in Montana. (See MONTANA.) Woman suffrage was voted upon by the electorates of West Virginia and of South Dakota. (See *Politics and Government* under these States). Prohibition made important gains at the polls. Michigan, Montana, South Dakota, and Nebraska voted for prohibition, while Utah and Florida are expected to enact a prohibition law at the next session of the Legislature.

The table on page 745 shows the pluralities in the presidential elections of 1912 and 1916, indicating the vote cast for the three main parties in 1912, and the two parties in 1916. The figures were compiled by the Associated Press.

**ELECTORAL COLLEGE.** While the election was in doubt, and while it seemed that the successful candidate might have a majority of the electoral vote, and the minority of the popular vote which had happened only a few times in the history of political campaigns, there was considerable agitation for the abolition of the electoral college. Newspapers so differing in their policies as the *New York Sun* and the *New York World* both urged that this feature of the elections should be done away with as having outgrown its original purpose. There was introduced into the Senate by Senator Shafroth of Colorado a resolution proposing an amendment to the Constitution providing for the election of President and Vice-President without the intervention of the electoral college. Senator Shafroth in introducing the resolution gave the following reasons why the electoral college should be abolished:

"The electoral college at the time of the formation of our government was deemed a wise means of electing the President and Vice-President, as it was anticipated the members would exercise their best judgment in selecting such officers. Washington hoped that political parties would never come into existence. However, they soon developed and after they had made nominations for those offices, presidential electors exercised no judgment of their own as to the candidates, but with only one exception cast their votes for the party nominees. The purpose of the electoral college having thus been voided, the machinery by which the electoral vote was cast became not only cumbersome, but dangerous. Notwithstanding full explanations having repeatedly been made many voters when they go to the polls expect to vote directly for President and Vice-President, and consequently the list on the ballots of different groups of men as electors for such officers is confusing to them. The re-

sult is that some presidential electors receive more votes than their party associates, and the effect sometimes is to split the vote of the State in the electoral college. Four years ago the vote of California was so divided, as was also the vote of West Virginia in the recent election. Since the election of 1872, 11 other States have split their vote under this system. Such results are subversive of the true intent of the voters of those States. . . . The constitutional amendment proposed provides that the candidates for President and Vice-President shall be directly voted for by the qualified citizens of each State, and that whoever receives the highest number of votes in the State for such offices shall be entitled to the electoral vote of such a State; his electoral vote shall be equal to one vote for each Senator and representative of that State, as now provided by the Constitution. In other words the electoral representation is preserved but the dangerous machinery abolished.

"Some believe that the President should be elected by a majority of the total vote of the republic, but a moment's reflection will show the impracticability of such a procedure. Colorado has woman suffrage, Connecticut has not. Although those States have practically equal population, the vote of Colorado is twice as large as that of Connecticut. Connecticut would never agree that the large vote of Colorado should be counted as part of the total vote of the republic when her vote is only half as large. Hence it would be impossible for such an amendment to receive the approval of the legislatures of three-fourths of the States."

No action was taken on this resolution, and with the final result of the election indicating a popular plurality as well as an electoral majority for Mr. Wilson the movement for the abolishment of the electoral college subsided.

**CAMPAIGN EXPENSES.** The expenditures made by the Democratic national committee amounted to \$1,808,348, and disbursements to \$1,684,589. Of the total received, \$465,558 was in contributions of less than \$100. The largest individual contributors to the Democratic fund were Cleveland H. Dodge of New York, \$79,000, and Edward L. Dohaney of California, \$25,000. Other individuals gave from \$3000 to \$12,500 each.

The Republican national committee received \$2,455,421, and expended \$2,441,565. The total came from 34,205 contributors. The largest individual contribution was from Harry Payne Whitney, \$30,000. Several others gave \$25,000, and large numbers gave from \$5000 to \$10,000 each.

**UNITED STATES AND THE WAR. THE QUESTION OF ARMED BELLIGERENT MERCHANTMEN.** The most pressing question awaiting solution at the beginning of 1916 related to the rights of merchant vessels to carry guns for defense. This question had already been before the American government at the beginning of the war when, in a memorandum, Germany was notified that in the view of the United States government "a merchant vessel of belligerent nationality may carry armament and ammunition for the sole purpose of defense without acquiring the character of a ship of war." This memorandum was sent to Germany as an answer to the German protest against the refusal of the United States to intern as ships of war British liners leaving or entering New York

with guns mounted. The German government dissented from the view that any belligerent merchant ship could carry guns. The United States declined to modify its rulings, but informed Germany that recognizing "the desirability of avoiding a ground of complaint," it had disapproved of the use of American ports by British vessels if armed, and had made representations to Great Britain that no armed merchant vessel since December, 1914, with the exception of two, had entered an American port.

The issue came strongly to the front at the beginning of 1916 from the sinking in the Mediterranean of a British ship, the *Persia*, which had carried a gun. This event took place on Dec. 29, 1915, and among the victims was the American consul at Aden, Robert McNeely. This event in itself did not raise the issue because Germany, Austria-Hungary, and Turkey all denied that the liner had been sunk by any of their submarines. The sinking of the ship, however, gave a new element to the submarine controversy, and an impression became current in Germany that the American government contemplated a change of policy on the submarine issue. The impression was strengthened by a proposal made by Secretary Lansing to the Allied Powers suggesting the disarmament of merchant vessels to assure the safety of their passengers and crew if attacked. This proposal was not well received by the Allied Powers, and nothing came of it. The announcement by Germany that all merchant vessels armed would be sunk without warning brought the issue squarely before the American government, and on Feb. 18, 1916, a resolution came before the Senate proposing acquiescence by the United States in the notification of the Central Powers of the right of their submarines to sink armed merchantmen. The foreign policy of President Wilson was bitterly assailed by Republican senators. There was a division in the Senate as to the stand the United States should take and a still wider one in the House of Representatives where a feeling prevailed that the country was slowly but surely headed toward war with Germany. A minority of the Congressmen made a demand that the American government warn all citizens off armed merchantmen and a resolution was actually pending in the House forbidding Americans to travel on ships that were armed. Finally President Wilson in a letter to Senator Stone on Feb. 24, 1916, refused to assent to any such abridgment of the rights of American citizens. This announcement of the President's had the effect of allaying somewhat the feeling in the House of Representatives, and efforts were made to smother the resolutions pending in both the House and Senate forbidding Americans to travel on armed merchant ships. In the belief that the country was with him in his stand, the President decided that an impression ought not to prevail that there was a division of feeling in the government, and that the question should be determined as to whether or not Congress upheld him. On Feb. 29, 1916, he demanded a test on the resolutions pending. In a letter addressed to the chairman of the House rules committee, President Wilson said:

"The report that there are divided counsels in Congress in regard to the foreign policy of the government is being made industriously use of in foreign capitals. I believe that report to

be false, but as long as it is anywhere credited, it cannot fail to do the greatest harm and expose the country to the most serious risks. I, therefore, feel justified in asking that your committee will permit me to urge an early vote on the resolutions on armed merchantmen which have recently been so much talked about in order that there may be afforded an opportunity for full public discussion and action upon them, and that all doubts and conjectures may be swept away, and our foreign relations once more cleared of damaging misunderstandings."

The House resolution, which had been proposed by McLemore of Texas, was thereupon revived for immediate consideration. The President's demand for a vote upon it came on the eve of the date set by the Teutonic powers for inaugurating their submarine war on armed merchantmen, March 1, 1916.

The immediate effect of the President's demand for a vote was to clear the air regarding the strength of his supporters in Congress. Opposition, however, was not entirely quelled. Senator Gore of Oklahoma introduced in the Senate a resolution forbidding Americans to travel on armed ships. He declared that he had been informed that if the American government insisted on maintaining its attitude in regard to armed merchantmen war would certainly result, and attributed to the President a statement to this effect. President Wilson denied that he had uttered words to which such a meaning could be attached. After two days' debate the resolution was finally put to a vote, and was defeated on March 3, 1916, by a vote of 63 to 14. Before the voting, however, the resolution had been so modified as to change its meaning. In its final form it read as follows:

"Resolved by the Senate, that the sinking by any submarine without notice or warning of an armed merchant vessel of her public enemy resulting in the death of a citizen of the United States would constitute a just and sufficient cause for war between the United States and the German Empire."

This resolution so beclouded the issue in the Senate as to make it doubtful what the question at issue was. Senator Gore himself voted against his amended proposal. The defeat of the resolution technically put the Senate on record against declaring war on Germany, if any of her submarines sunk an armed merchantman without warning. Actually the defeat of the resolution supported the administration in its policy of upholding the rights of Americans to travel on belligerent ships, and the small number of senators who voted for the amended resolution were hostile to the administration's policy.

In the meantime in the House the vote on the McLemore resolution had been delayed, and after an effort to have it laid on the table without further action it was defeated on March 7th by a vote of 276 to 133.

Following this action of Congress, Secretary Lansing issued a ruling of the State Department, defining the status of armed merchant ships. Germany was notified that the United States recognized the equity of her argument—that if a vessel was armed and used its armament to attack a submarine the latter could not be called upon to give warning—since by its so doing the safety of the submarine and its crew

was imperiled. He repeated, however, that it had been frequently pointed out that each case must be judged by itself, and that only a belligerent ship which had been proven guilty of such an offense could be regarded as a warship. The presence of armament could not of itself be construed as a presumption of hostility. The question thus remained practically as it had been prior to the passage of the resolutions in Congress.

The question came to a sharp issue, however, through the sinking by German submarines of four ships having Americans on board. These were the *Eagle Point*, the *Manchester Engineer*, the *Englishman*, and the *Sussex*. All were sunk except the last named vessel, and the Americans were saved except on the *Englishman*, though not in several cases without injury.

**CASE OF THE SUSSEX.** The circumstances of the torpedoing of the *Sussex* provoked a final clash between the United States and Germany. This vessel was a Channel ferryboat plying between Folkstone and Dieppe. On March 24, 1916, while nearing the latter port with 436 persons on board, including 75 Americans, she was struck by a torpedo from a submarine. The disabled boat was towed to Boulogne, where a majority of the persons were landed. About 50 persons lost their lives, and 3 Americans were hurt.

The American State Department at once instructed the American ambassador at Berlin to ascertain whether the *Sussex* had been attacked by a German submarine. Unofficial denials that this was the case came from Berlin, and the German admiralty declined to deny or explain until reports had been received from all submarines operating off the French coast. The State Department made no effort to discuss the case with the German government, but placed the burden of proof upon Germany. The first informal explanation from the German government was that the *Sussex* had struck a British mine, but this was quickly disproved. For 11 days after the attack on the *Sussex* the Berlin authorities preserved a spirit of ignorance regarding the torpedoing, but the seriousness with which the case was viewed in the United States, coupled with the instructions from Washington to Ambassador Gerard, at length caused the German office to call upon the admiralty for a report on the destruction of the vessel or if any submarine commander could throw any light upon it. On April 10, 1916, the German government informed the State Department that the admiralty had subjected the affair to the fullest investigation, and that it had found that no German submarine attacked the *Sussex*, but that one torpedoed another vessel in the same place, and with the same result. A sketch of the vessel attacked made by the commander of the submarine was submitted to show that it was not the *Sussex*. The charge was again made that the vessel had been blown up by an English mine. The note concluded as follows:

"Should the American government have at its disposal further material for a conclusion upon the case of the *Sussex* the German government would ask that it be communicated in order to subject the material also to an investigation. In the event that difference of opinion should develop between the two governments the German government now declares itself ready to have the facts of the case estab-

lished through mixed commissions of investigation in accordance with the third title of the Hague agreement for the peace settlement of international conflicts, Nov. 18, 1907." In explaining the sinking of the other three vessels the German note professed to be unable to say whether the *Manchester Engineer* was attacked by a German submarine, but declared that in the case of the *Englishman* and the *Eagle Point* the vessels were attacked while attempting to escape.

This communication created the worst of impressions in the United States. The explanation of the German government was considered to be very unsatisfactory, and the fact that a vessel resembling in general the *Sussex* had been torpedoed at the same time and place, was taken as conclusive evidence that a German submarine had made the attack. On April 19, 1916, President Wilson addressed Congress on the issue. He declared that a situation had arisen which made it his plain duty to speak with the utmost frankness. He announced that he had notified Germany that "unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passengers and freight-carrying vessels the Government of the United States can have no choice but to sever diplomatic relations with the German government altogether." The address of the President was more or less a paraphrase of the note which had been on the same day sent to Berlin. In this note Secretary Lansing informed the German government that its note denying any attack on the *Sussex* but acknowledging that another vessel had been torpedoed under identical circumstances as to time, place, and result confirmed the inferences the American government had drawn from information that it possessed establishing "facts in the case of the *Sussex*." A statement of facts was included in the note. It comprised the testimony of passengers on board the vessel, and proved that the *Sussex* carried no armament; that the vessel had not been employed as a troop ship, only as a ferryboat, and was following a route not used for transporting troops; that a number of pieces of metal were found which were claimed by experts to be parts of a German torpedo. In regard to the drawing made by the German submarine commander, Mr. Lansing said in effect that this had no value as proof.

The German government waited 15 days before replying to this note. On May 15, 1916, it admitted the possibility that the ship was actually the *Sussex*. On the vital question of the conduct of submarine warfare the note yielded to the American demand. After a detailed exposition of the German attitude on the whole matter of sinking merchant vessels, the note said:

"In accordance with the general purpose of visit and search and the destruction of merchant vessels recognized by international law, such vessels both within and without the area declared a naval war zone shall not be sunk without warning and without saving human lives unless the ships attempt to escape or offer resistance."

After a repetition of its plea that the United States government should aid in restoring the principle of the freedom of the seas, the note continued:

"Accordingly the German government is confident that in consequence of the new orders issued to the naval forces the Government of the United States will also now consider all impediments removed which may have been in the way of a mutual coöperation toward restoration of the freedom of the seas during the war as suggested in the note of July 23, 1915, and it does not doubt that the Government of the United States will now demand and insist that the British government shall forthwith observe the rules of international law universally recognized before the war as they are laid down in the notes presented by the Government of the United States to the British government Dec. 28, 1914, and Nov. 5, 1915. Should steps taken by the Government of the United States not attain the object it desires, to have the laws of humanity followed by all belligerent nations, the German government would then be facing a new situation in which it must reserve to itself complete liberty of decision."

Although the German reply was as little conciliatory as words could make it, it did in fact yield to the United States government on the main issue. A response to the German note was sent three days later. After accepting the German declaration of its abandonment of its submarine policy, the note declared that:

"The Government of the United States feels it necessary to state that it takes for granted that the Imperial German government does not intend to imply that the maintenance of its newly announced policy is in any way contingent upon the course or result of diplomatic negotiations between the Government of the United States and any other belligerent government, notwithstanding the fact that certain passages in the Imperial government's note of the fourth instant might appear to be susceptible to that construction.

"In order, however, to avoid any possible misunderstanding the Government of the United States notifies the Imperial government that it cannot for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other government affecting the rights of neutrals, and non-combatants. Responsibility in such matters is single, not joint; absolute, not relative."

This exchange of notes for the time being settled the question. On May 8, 1916, the German government sent a further communication in which it practically acknowledged that it had been wrong in its assumption that the *Sussex* had not been destroyed by German submarines. It declared that an error had been made by the submarine commander in taking the boat for a British transport. It acknowledged error and promised to pay an adequate indemnity to the injured American citizens, and declared that the commander of the submarine had been appropriately punished.

THE CASE OF THE APPAM. The appearance of a captured British steamer, the *Appam*, in Newport News, Va., on Feb. 1, 1916, in charge of a German naval lieutenant and a prize crew involved the United States in new maritime difficulties with the belligerents. The *Appam* was captured by a German raider, *Moewe*, off Madeira, and was crowded with passengers, crews,

American Ambassador to Germany

and German prisoners taken from a number of other ships sunk by that vessel. Lieutenant Berg, the commander of the *Appam*, sought refuge in an American port, and claimed for his prize the privilege of asylum under the protection of American laws until he chose to leave. Count von Bernstorff, the German ambassador, immediately notified the State Department that Germany claimed the *Appam* as a prize under the Prusso-American treaty of 1828, and would contend for possession of it. The British government contested the German claim by demanding the release of the *Appam* under the Hague Convention of 1907. This treaty provided that merchantmen prizes could only be taken into a neutral port under certain circumstances of distress, injury, or lack of food, and that if she did not depart within a stipulated time the vessel could not be interned, but must be restored to her original owner with her whole cargo. The owners of the *Appam*, the English Navigation Company, brought suit in the Federal courts for the possession of the vessel on the ground that having been brought into a neutral port she had lost her character as a German prize, and must be returned to her owners. In the meantime the *Appam* was seized by Federal marshals under instructions from the United States district court. The case was heard at Norfolk, in May, 1916, by Judge Waddill. The German ambassador protested against the suit being permitted to proceed, as the *Appam* flew the German naval flag, and belonged to the German government. He requested the internment of the *Appam* in the American port for the remainder of the war under article 19 of the Prusso-American Treaty of 1799, and asked for the immediate dismissal of the suit through action of the Department of Justice. Secretary Lansing denied this request, on the ground that the treaty is applicable only to prizes brought to American ports by vessels of war. Judge Waddill gave his decision on July 29th. He held that the *Appam* lost her status as a prize when she entered American territorial waters, to remain indefinitely. He rejected the German contention that the Prusso-American Treaty of 1799 permitted German prizes to be laid up in American waters. "The court's conclusion," he said, "is that the manner of bringing the *Appam* into the waters of the United States, as well as her presence in those waters, constitutes a violation of the neutrality of the United States; that she came in without bidding or permission; that she is here in violation of the law; that she is unable to leave for lack of a crew, which she cannot provide or augment without further violation of neutrality; that in her present condition she is without lawful right to be in and remain in these waters; that she, as between her captors and owners, to all practical interest and purposes must be treated as abandoned and stranded upon our shores, and that her owners are entitled to restitution of their property, which this country should award irrespective of the prize court proceedings of the Court of the Imperial Government of the German Empire, and it will be so ordered." The German embassy took steps to appeal from this decision and to carry the case to the United States Supreme Court.

DISPUTES WITH GREAT BRITAIN. A dispute arose in January, 1916, over the opposition to

the Trading with the Enemy act, one of Great Britain's war measures, the provisions of which were enlarged to forbid British merchant ships trading with any person or firm that, while domiciled in a neutral country, had German trade connections. The United States objected to the prohibition as constituting a future unlawful interference with the trade. It held that in war time trade of such a person or firm domiciled in a neutral country had a neutral status, and consequently was not subject to interference. Hence the goods in transit to such a trader were not subject to confiscation by a belligerent unless contraband or consigned to an enemy country.

Another difficulty which led to repeated protests on the part of the United States was Great Britain's rigid censorship of neutral mails. Charges were made in the United States Senate that the British mail censorship was using this means to obtain trade information for the benefit of British merchants. Great Britain promptly disavowed this assertion, and pointed out that the examination of letters in the trade branch of the postal service was confined to first, direct trading with the enemy; second, indirect trading with the enemy; third, trading by unauthorized persons in the British Empire in munitions of war; fourth, the discovery of intermediaries, that is, evidence that persons or firms in neutral countries are acting as intermediaries for the enemy in correspondence or business; fifth, the intercepting of any information of interest concerned with trading or finance in relation to the war, such as the economic condition of enemy countries, or the supply of, or demand for, or price of, important commodities and munitions. The American government on May 24, 1916, sent a strong protest to Great Britain, warning her that the United States would be compelled to place claims for damages against the Allied Powers for serious mail losses suffered by American citizens. Secretary Lansing claimed in this protest that important papers which could not be duplicated, had been lost through the examination by English authorities; that delays in receiving shipping documents had caused great loss and inconvenience, that business opportunities were lost by failure to get bids, specifications, and contracts, and that great embarrassment had been felt through other matters. The method of seizing mails was denounced in indignant terms. To this Great Britain replied in a note in which it was promised to facilitate the passage of innocent mails with a minimum delay after inspection.

Great Britain's method of policing the seas resulted in several protests on the part of the United States government and in one case at least resulted in representations being made which eventually forced Great Britain to surrender to the American demand. A British cruiser had stopped an American vessel, the *China*, somewhere off Shanghai, and had taken from her 38 men of various nationalities, and confined them to military barracks. After the American government had been informed that none of these subjects of the Central Powers belonged to the war forces of their respective countries the action of the British cruiser in seizing these despite the protests of the American captain was considered to be an unwarrantable invasion of the sovereignty of the American

vessels on the high seas. The American ambassador was instructed to demand the immediate release of the men. The British government defended its action on the ground that the arrested men were involved in a plot to make Manila the base for the perpetration of unneutral acts against the Allies. The United States government repeated its demand for the release of the men on the ground that none of the British arguments had any validity, and in May, 1916, they were finally released after being held as prisoners for almost three months.

Measures taken by the British government to prevent commercial transactions of whatever character with Germany through other countries resulted in considerable friction with the American government, as noted above. British firms were forbidden to trade with foreign firms suspected or known to have dealings with German agencies in any parts of the world. Early in 1916 Secretary Lansing asked Ambassador Page to convey to the British government that these acts were deemed to be "pregnant with possibilities of undue interference with American trade." The act had been framed with the object of bringing regulations controlling British trade with the enemy into greater harmony with those adopted by the French government. France, and other countries, too, held the doctrine that their nationals could not trade with an enemy no matter where he was domiciled. The old British theory had been that trading with the enemy could only be forbidden if the enemy was domiciled in enemy countries. This view was now revised, and the government decided to prohibit persons domiciled in the United Kingdom from trading with a limited number of individuals, firms, or companies, of enemy nationality under the same penalties as though they were actually trading with the enemy.

In answer to Secretary Lansing's objections the British government readily admitted the right of persons of any nationality resident in the United States to engage in legitimate commercial transactions "with any other person," but it declined to concede that this right can in any way limit the right of other governments to restrict the commercial activities of their nationals in any manner which may be desirable to them by the imposition of prohibition and penalties which are operative solely on persons under their jurisdiction.

On Jan. 27, 1916, the British government blacklisted 82 firms or companies domiciled in the United States with whom British subjects were forbidden to trade. (See FINANCIAL REVIEW.) On July 26th, the United States government sent a protest against it, condemning the issue of the blacklist as embodying a policy of arbitrary interference with neutral trade. In this note it was declared that "American citizens were entirely within their rights in attempting to trade with the peoples and governments of any of the nations now at war, subject only to well-defined international practices and understandings which the Government of the United States deems the Government of Great Britain to have too lightly and too frequently disregarded."

Further discussions on the way of trading with foreign countries arose through British attempts to curb neutral trade with the Netherlands Overseas Trust. Under a scheme to ra-

tion the neutral countries Norway, Sweden, Denmark, and Holland, restricting their imports to their estimated domestic needs, further licenses granted to British exporters to trade with these countries were discontinued. This action was taken for fear of a surplus of supplies reaching Germany through neutral channels. A check on American exports followed, by Great Britain's forbidding the Overseas Trust to accept further consignments of certain commodities from the United States for Holland, and by her refusal to grant letters of assurance safeguarding American shipments destined for the three other countries. The effect was that certain American consignments destined for Holland were stopped altogether, while countries trading with the United States and Scandinavia could not take cargoes without British assurances of safe discharge at the ports of destination. The British official view was that excessive exports from Great Britain to these countries could not very well be forbidden, while permitting them from the United States and other neutral sources. Congress gave President Wilson certain discretionary powers for trade reprisals against the countries whose governments interfered with American trade during the war. One of these measures provided for the creation of a shipping board, and empowered the Secretary of the Treasury to forbid clearance to any vessel whose owners or agents refused to accept consignments offered for transport by an American citizen for reasons other than lack of space, or inadaptability of the vessel to carry the cargo offered. Another measure, the Omnibus Revenue law, contained provisos for retaliation for the Allied blacklist of German-American firms, and the various blockades and embargoes in operation against American products. On October 10th, Lord Grey addressed to the American government a long communication intended to make plain the attitude of Great Britain in putting into effect the blacklist and other measures regulating trade. The substance of the note was that Great Britain maintained the right in this crisis to withhold facilities to those who conducted trade for the benefit of her foes. Lord Grey characterized this right as so obvious that he could not believe that the United States seriously contested the inherent privilege of a sovereign state to exercise it except under a misconception of the scope and intent of the measures taken. On October 12th, Lord Grey addressed another communication to the United States government in regard to the censorship of mails. It threw no new light on the subject. These controversies remained in this condition at the end of the year.

THE DEUTSCHLAND. One of the greatest surprises of the year was the sudden appearance in Chesapeake Bay on July 9th of a German submarine merchantman, the *Deutschland*. This vessel, the first of its kind to be constructed, left Bremen on June 24th, and proceeded to Helgoland where she remained for four days, training the crew for the long voyage, and testing the equipment. After a voyage in which she escaped notice entirely, she arrived in Baltimore. The *Deutschland* was officially classified as an unarmed merchant vessel. She carried no guns. Her gross tonnage was 791, and she carried 29 officers and sailors. The vessel was about 25 feet wide, and was propelled by two

Diesel engines of 600 horse power. Her cargo was mainly dyestuffs and chemicals, valued at about \$750,000. Great Britain and France protested against the presence of this vessel in an American port, on the ground that she was potentially a warship. Mr. Polk, acting Secretary of State, announced on July 15th that there was no reason to regard the *Deutschland* as a warship. This ruling entitled the submarine to the benefit of visit and search. After remaining in Baltimore until August 2nd, the *Deutschland* sailed for Bremen, where she arrived on August 23rd, carrying a cargo of rubber, crude metal, and a consignment of gold. It was reported that a still larger submarine merchantman, the *Bremen*, would follow the *Deutschland* but she did not arrive. The *Deutschland* arrived on a second trip in the harbor of New London, on the morning of November 1st. She made the trip without special incident. She sailed again for Germany on November 17th.

**THE EXPLOITS OF THE U-53.** An even greater surprise than the visit of the *Deutschland* was the unheralded arrival at Newport, R. I., on October 7th, of a German submarine, the *U-53*. It remained at Newport long enough to deliver a message to Count von Bernstorff, to pay a ceremonial visit to Admiral Knight, the American commander, and obtain a parcel of American newspapers. It then left the harbor and disappeared. On the following day the submarine appeared off Nantucket where, in quick succession, it sank five merchant ships, three British, one Dutch, and one Norwegian. The *U-53* then disappeared and was not again heard of up to the end of the year. This episode involved the United States government in diplomatic difficulties with the Allied Powers. The vessels destroyed were, to be sure, outside the three-mile limit. The ships struck were the *Strathdene*, British, the *West Point*, British, *Bloomersdijk*, Dutch, the *Christian Knudsen*, Norwegian, and the *Stephano*, a British passenger liner sailing regularly between New York and Halifax. Among the *Stephano's* passengers were a number of Americans. During the destruction of these vessels by the *U-53* a number of American destroyers remained in the vicinity, and commanders and crews were actual witnesses of the sinking and took part in assisting the victims of the vessels to safety. The American destroyer *Balch* rescued passengers and crew of the *Stephano* numbering 140, and other destroyers took on board crews of the four freighters.

There was much public alarm over the incident, and President Wilson found it necessary to assure the country "that the German government will be held to the complete fulfillment of its promises to the United States. I have no right to question its willingness to fulfill them." After deliberations on the part of the government officials it was decided that the *U-53* had not ignored the German pledge in that it had first warned the vessels and given time for the people on board to be safely transferred to boats and carried to safety. The incident passed as one in which no action could be taken by the United States. The Allied governments did not protest against the decision of the United States government that the *U-53* exploits were within the law. There were, however, many derogatory comments in the foreign

press, and on the part of public speakers in France and England.

**FURTHER SUBMARINE DIFFICULTIES.** Following the agreement arrived at between Germany and the United States government in regard to submarine warfare in May, there was comparatively little friction between the two governments over the issue. There were, however, Americans aboard vessels which had been sunk by German submarines. These include the *Rowanmore*, British freighter bound from Baltimore to Liverpool, sunk on October 25th, in which there were two Americans and five Filipinos; the *Marina*, a British horse carrier, bound from Glasgow to Newport News, sunk on October 29th, when six Americans lost their lives; the *Arabia*, a passenger liner, sunk on November 6th, with one American on board; and the *Columbian*, an American steamer sunk off the Spanish coast on November 8th. The *Marina* and *Arabia* carried cargoes, and Germany justified the sinking of these vessels on this ground. It was alleged that the *Rowanmore* attempted to escape, and that, therefore, its destruction was justified. It was also alleged that the *Marina* and *Arabia* were engaged in transport service. This was denied by the American government. In the case of the *Arabia* 450 passengers were on board, including women and children who were saved only because the vessel sank gradually. Germany admitted liability for sinking the *Columbian*, and agreed to pay for the value of the vessel and the contraband cargo which she carried. The case of the *Marina* was considered by the State Department as a clear violation of Germany's pledge to the United States. Her gun was not used, and no opportunity was afforded for using it. No final decision was taken on these cases at the end of the year, and negotiations were side-tracked in December by the consideration of peace proposals on the part of Germany, and the efforts of President Wilson to bring about an agreement for the consideration of peace on the part of the contestants.

**GERMAN PROPAGANDA IN THE UNITED STATES.** German efforts to influence public opinion in the United States took much less aggressive forms in 1916 than in the previous year. The German military attaché, Franz von Papen, who was recalled at the request of the United States government, at the end of 1915, arrived at Falmouth, England, on January 5th, under a safe conduct for his person only. His baggage was examined by the English authorities, and it was shown by his check-book and other documents that he had paid out considerable sums of money to persons who had been involved in secret service work on the part of the German government in the United States. On February 8th Consul-General Bopp and others were indicted by the Federal grand jury in San Francisco on charges of conspiracy to interfere with commerce under the Anti-Trust act, and for conspiracy to organize a military expedition. In addition to the Consul-General a number of officers attached to the consulate were indicted. All were involved in alleged plots to blow up Canadian tunnels and American powder mills. These indictments were the first which the United States had attempted to secure against any foreign representative. The defendants were found guilty. Arguments in the appeal

of Werner Horn, indicted for illegally transporting dynamite in an attempt to blow up the international bridge at Vanceboro, Me., on Feb. 2, 1915, were heard by the Federal Circuit Court of Appeals in Boston on February 2nd. A commission appointed to examine Horn as to his sanity declared him sane. The court decided, on April 27th, that Horn must stand trial. It denied his application for a writ of habeas corpus. There were no further developments in the case during the year. Ignatius T. T. Lincoln, who had confessed himself to be a German spy and was arrested at the request of the English government, escaped on January 15th, but was rearrested on February 19th. Lincoln appealed from the decision of the Federal district court of New York which refused to release him on habeas corpus, to the United State Supreme Court. The latter court, on May 1st, affirmed the judgment of the District Court, and he was taken under guard to London on May 27th, arriving on June 6th. After a preliminary hearing at the conclusion of which he was committed for trial he pleaded guilty on June 19th. Paul Koenig, head of the Bureau of Investigation of the Hamburg-American Steamship line, was arrested on January 11th. The charge made against him was that he was in coöperation with Frederick Schleindel, a clerk in the National City Bank, who had been arrested on Dec. 17, 1915, charged with having stolen from the bank documents containing information of munition shipments to the Allies. Capt. Hans Tauscher, American representative of the Krupp Gun Works, and husband of Madame Johanna Gadski, the grand opera singer, was arrested in New York City on May 30th on the charge of planning to blow up the Welland Canal in Canada. The chief evidence against him was furnished by Horst von der Goltz, a German propagandist, who was released from the Tower of London and was sent to New York to testify in cases regarding German breaches of neutrality. This was the second alleged plan to destroy this canal, the first having been organized, it was said, by Paul Koenig, who is referred to above. Captain von Papen, who had been recalled to Germany, was, on April 17th, indicted by a Federal grand jury as one of the heads of this conspiracy. It was the first time in the history of the country that a man had been indicted who was an accredited diplomatic representative of a foreign power at the time the offense alleged in the indictment was committed. In addition to Captain von Papen four others were named in the indictment, Wolf von Igel, former secretary to Captain von Papen, Captain Tauscher, Captain Boy-Ed, former German naval attaché, and Franz von Rintelen, a German agent whose activities had previously been under investigation by the Federal grand jury. Von Igel was arrested on April 18th. He protested that he was under the protection of the German embassy and was immune from arrest. He was released on \$20,000 bail. Count von Bernstorff, the German ambassador, demanded his release and the return of documents seized from his office. These documents were said to connect high officers in the German diplomatic service with the plot to blow up the Welland Canal, and with many bomb outrages on ships carrying munitions. The documents were photographed and the copies sent to Washington. The State Department an-

nounced on April 21st that it would return any of the papers that might be pointed out as German embassy documents. Count von Bernstorff declared that von Igel's office in New York City was a part of the German embassy, but this was denied by United States officials. Captain Tauscher was tried on the charge of conspiracy, and was found not guilty on June 30th. Practically the only witness against him was von der Goltz, the German agent, whose evidence Judge Hand, who presided at the trial, declared was not conclusive under the circumstances. Franz von Rintelen was indicted on May 26th by a Federal grand jury, as the basis of a demand by the Federal authorities for his extradition. The indictment charged von Rintelen with fraud in connection with his procurement of an American passport.

On April 12th four men charged with complicity in manufacturing fire bombs to be placed aboard ships carrying munitions and supplies to the Allies were arrested by agents of the Department of Justice acting with the New York police. They were Ernest Becker, an electrician, Capt. Charles von Kleist, superintendent of the New Jersey Agricultural and Chemical Company, Capt. Otto Wolpert, superintendent of piers of the Hamburg-American line, and Capt. Enno Bode, also superintendent of piers for this line. The arrests were the result of investigations which had been carried on since June, 1915, when the French government complained to the State Department that unexploded bombs had been found in sugar bags aboard the steamship *Kirk Oswald*. Four other German subjects, engineers on the North German Lloyd liner *Friedrich der Grosse* laid up in Hoboken, were arrested on April 12th. All these men were indicted on April 28th. No action was taken on these cases at the end of the year. On May 18th, Count von Bernstorff informed Secretary Lansing that he had issued instructions to all German consuls in the United States to admonish all German subjects to abide by the laws of the United States, this action being taken under direct orders of the Berlin Foreign Office. It was unexpected, as the United States government had made no representations which could have called forth the warning. Following this statement there was a great falling off in the activity of German agents in the United States. Lieut. Robert Fay, who had been convicted in a conspiracy to blow up munitions ships of the Allies, escaped from the Federal prison in Atlanta, Ga., on August 29th. A companion who escaped with him was recaptured on September 9th, in New York City. Fay was not recaptured.

EXPLOSIONS IN MUNITIONS PLANTS. There were, during the year, several explosions in munitions plants, but in no case was the result traced directly to malicious intent on the part of enemies of the Allies. On January 10th, a portion of the Du Pont Powder Works at Kearney's Point, N. J., exploded. Several men were killed. Another plant of this company at Gibbstown, Pa., was blown up on May 15th, when 14 men were killed and about 30 injured. On July 30th, property loss estimated at \$25,000,000 was caused by a series of terrific explosions of ammunition which was awaiting shipment on Black Tom Island, a small strip of land in New York Bay, off Jersey City, N. J. Following the explosion fire started,

and destroyed 13 warehouses owned by the National Storage Company on the island, in which was stored merchandise valued at between \$12,000,000 and \$15,000,000. Evidence indicated that fire started in a barge which had been moored alongside the railroad dock. Several investigations were made as to the cause of the explosion but no definite conclusion was arrived at. It had the result, however, of causing the State and city governments to prohibit storage of munitions where communities would be endangered. The Secretary of War also took action and on October 17th stated that regulations would be put into effect permitting only "unfixed" ammunition of low destructive power to be loaded in New York Bay.

**UNITED STATES AND PEACE.** The Ford Peace Expedition which sailed from New York in the latter part of 1915, with the object of bringing about immediate peace among the warring countries, failed of its object. Mr. Ford himself returned to New York on Jan. 1, 1916. The party which had landed at Copenhagen went from there to The Hague on January 6th and 7th. In that city a permanent conference was formed, including delegates from neutral countries, and William J. Bryan, Mr. Ford, Dr. Aked, Jane Addams, and Mrs. Fels were elected American members. It was planned that the permanent peace board should sit in Europe indefinitely for the purpose of using all efforts to settle the war. About 150 members of the party returned to the United States in the latter part of January, 1916. On March 10th, Madame Rosika Schurmmmer, who was credited with having originally planned the peace trip, retired from the permanent peace board. On July 25th Dr. Aked resigned as chairman of the American committee to the peace conference, at Stockholm, because he declared the conference had utterly failed in its object of bringing about peace. Miss Jane Addams made an extended tour through neutral countries during the first part of the year, and on her return made a number of addresses on the general subject of peace.

There were in the latter part of the year rumors from various sources that Germany desired to bring about peace on whatever terms she could best command. The general subject of such efforts does not belong properly to this article. (See **WAR OF THE NATIONS**.) Here will be considered only the relations of the United States and efforts to bring about a situation where peace at least might be discussed. The German government sent to the United States as well as to other neutral countries a note on December 12th in which it suggested that the time had come for some definite effort to bring about a condition of peace. The note contained the following passage: "Our aims are not to shatter or annihilate our adversaries. In spite of our consciousness of our military and economic strength, and our readiness to continue the war, which has been forced upon us, to the bitter end if necessary; at the same time prompted by the desire to avoid further bloodshed, and to make an end to the tragedies of war, four allied Powers propose to enter forthwith into peace negotiations. If in spite of this offer of peace and reconciliation the struggle should go on the four allied Powers are resolved to continue to a victorious end, but they disclaim responsibility for this before humanity

and history." This note was transmitted by the United States government to the Entente Powers without comment. It became known on December 20th that on December 18th, the day prior to the date on which President Wilson had transmitted to the Entente Powers the German note of December 12th, Secretary Lansing had sent to the American diplomatic representatives in the warring countries the following communication:

"The President directs me to send you the following communication to be presented immediately to the minister of foreign affairs of the government to which you are accredited:

"The President of the United States has instructed me to suggest to the [here is inserted a designation of the government addressed] a course of action with regard to the present war, which he hopes that the government will take under consideration as suggested in the most friendly spirit, and as coming not only from a friend but also as coming from the representative of a neutral nation whose interests have been most seriously affected by the war and whose concern for its early conclusion arises out of a manifest necessity to determine how best to safeguard those interests if the war is to continue.

[The third paragraph of the note as sent to the four Central Powers—Germany, Austria-Hungary, Turkey, and Bulgaria—is as follows:]

"The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by a desire to play a part in connection with the recent overtures of the Central Powers. It has, in fact, been in no way suggested by them in its origin, and the President would have delayed offering it until those overtures had been independently answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

[The third paragraph of the note as sent to the 10 Entente Allies—Great Britain, France, Italy, Japan, Russia, Belgium, Montenegro, Portugal, Rumania, and Serbia—is as follows:]

"The suggestion which I am instructed to make the President has long had it in mind to offer. He is somewhat embarrassed to offer it at this particular time, because it may now seem to have been prompted by the recent overtures of the Central Powers. It is, in fact, in no way associated with them in its origin, and the President would have delayed offering it until those overtures had been answered but for the fact that it also concerns the question of peace and may best be considered in connection with other proposals which have the same end in view. The President can only beg that his suggestion be considered entirely on its own merits and as if it had been made in other circumstances.

[Thenceforward the note proceeds identically to all the powers, as follows:]

"The President suggests that an early occasion be sought to call out from all the nations now at war such an avowal of their respective views as to the terms upon which the war might be concluded and the arrangements which would be

deemed satisfactory as a guaranty against its renewal or the kindling of any similar conflict in the future as would make it possible frankly to compare them. He is indifferent as to the means taken to accomplish this. He would be happy himself to serve, or even to take the initiative in its accomplishment, in any way that might prove acceptable, but he has no desire to determine the method or the instrumentality. One way will be as acceptable to him as another, if only the great object he has in mind be attained.

"He takes the liberty of calling attention to the fact that the objects, which the statesmen of the belligerents on both sides have in mind in this war, are virtually the same, as stated in general terms to their own people and to the world. Each side desires to make the rights and privileges of weak peoples and small states as secure against aggression or denial in the future as the rights and privileges of the great and powerful states now at war. Each wishes itself to be made secure in the future, along with all other nations and peoples, against the recurrence of wars like this and against aggression or selfish interference of any kind. Each would be jealous of the formation of any more rival leagues to preserve an uncertain balance of power amid multiplying suspicions; but each is ready to consider the formation of a league of nations to insure peace and justice throughout the world. Before that final step can be taken, however, each deems it necessary first to settle the issues of the present war upon terms which will certainly safeguard the independence, the territorial integrity, and the political and commercial freedom of the nations involved."

Following the sending of this note several explanatory statements were made in regard to it. Secretary Lansing issued a statement to the public in which he said:

"It isn't our material interests which we had in mind when the note was sent, but more and more our own rights are becoming involved by the belligerents, on both sides, so that the situation is becoming increasingly critical.

"I mean by that that we are drawing nearer the verge of war, and therefore we are entitled to know what every belligerent seeks in order that we may regulate our conduct in the future.

"The sending of this note will indicate the possibility of our being forced into the war. That possibility ought to serve as a restraining and sobering force safeguarding American rights. It may also serve to force an earlier conclusion of the war."

Still another statement was issued by Secretary Lansing in which he said of his first statement: "My intention was to suggest the very direct and very necessary interest which this country as one of the neutral nations has in the possible terms which the belligerents may have in mind, and I did not intend to intimate that the country was considering any change in its policy of neutrality, which it has constantly pursued in the face of constantly increasing difficulties."

The immediate effect of the President's note was one of surprise and bewilderment on the part of the public, both in the United States and in Allied countries. Resentment was especially felt in France and England, that President Wilson apparently placed the belligerent

powers on the same footing. On further consideration, however, it was finally conceded that the note would have a salutary effect if it were taken literally as written.

Germany was the first of the countries at war to answer President Wilson's request. A note sent on December 17th was brief and evasive. The German government declined to be drawn into stating its peace terms. It declared that as President Wilson had left open the choice of road an immediate exchange of views seemed to be the most appropriate method in order to reach the desired result. It proposed therefore an immediate meeting of delegates of the belligerent states at a neutral place. The German government stated moreover that it was of the opinion that the great work of preventing future wars can be begun only after the present war is over, "when it would be pleased to collaborate with the United States in that exalted task."

The answer of the Allied Powers to the original German peace proposal came on Dec. 30, 1916. It was, in effect, a summing up of the cause of the Allies, and an assertion that peace could not be secured without reparation, restitution, and assurance of the impossibility of further warfare on the part of Germany. The Allies had not replied to President Wilson's note at the end of the year.

See also WOMAN MOVEMENT.  
**UNITED STATES COMMISSION ON INDUSTRIAL RELATIONS.** See INDUSTRIAL RELATIONS COMMISSION.

**UNITED STATES DEPARTMENT OF AGRICULTURE.** In his annual report for 1916 the Secretary of Agriculture briefly summarizes the achievements of the present administration along the lines of rural economics, including especially the marketing of farm products, rural finance, and rural organization. Attention is called to the creation and development of the Office of Markets and Rural Organization, which has already become one of the large Bureaus of the Department, its appropriation for 1916-17 aggregating \$1,242,000. "Today the nation possesses the largest and best trained and supported staff of experts dealing with the distribution of agricultural commodities and rural organization to be found anywhere in the world. It is engaged in investigating all the larger and more difficult problems confronting farmers in this new field."

Among the results of the Department's activities in this direction was the enactment of the Cotton Futures act, the United States Grain Standards and Warehouse acts, the Federal Farm Loan act, and the Federal Aid Road act. (See AGRICULTURE and AGRICULTURAL LEGISLATION.) The great force of extension agents cooperatively employed by the Department, the State agricultural colleges, and the counties (see AGRICULTURAL EXTENSION WORK) is also largely engaged in diffusing among the farmers information bearing on their economic problems, as well as on those relating to agricultural production, and is aiding them to form effective organizations for economic and social purposes.

Discussing the food supply of the United States the Secretary points out that while our population during the past 16 years has increased 33 per cent the per capita production of poultry, eggs, fish, cereals, potatoes, and vegetables has remained approximately the same

or has increased. Only in the case of meats and dairy products has there been a decrease. The Department, as well as the State Experiment Stations, is actively engaged in efforts to increase meat production (1) by checking and eliminating diseases and parasites and (2) by increasing and improving stock raising. Much is also being done to increase and stabilize crop production by extension of areas of production, increase of yields per acre, and control of insects and plant diseases. The campaign to standardize manufactured food products, maintain their purity, and improve their quality is being actively prosecuted.

Important legislative and administrative developments in connection with the national forests occurred in 1916. As the result of progress in classification of the lands included in these forests several million acres were restored to the public domain or opened to entry under the forest homestead act. On July 1, 1916, there remained in public ownership 155,420,280 acres. The forests were more fully equipped with roads, timber sales were increased, nearly three-fourths of a million head were added to the live stock grazed in these forests, mining activities were stimulated, and there was a broader use of the forests for recreation and health. Some confusion has arisen from the administration of the national forests and the national parks by the Departments of Agriculture and the Interior. The Secretary of Agriculture therefore recommends that the transfer of the administration of the parks to his Department should be considered.

A division of agricultural meteorology was established in the Weather Bureau. In addition to the continuance of efforts to prevent crop losses by warnings of adverse conditions, studies will be made on the relation of the environmental factors in climate to the growth of plants and the production of crops. The effect of weather and climate on the factors of plant growth, including critical periods in the development of plant life, will be investigated. The co-operation of the State Agricultural Experiment Stations in this work has been enlisted.

The appropriations for the Department for the year ended June 30, 1916, amounted to \$22,971,782 for ordinary expenses, in addition to permanent and special appropriations amounting to \$7,490,412, making a total of \$30,462,194.

The appropriations for the year ending June 30, 1917, for ordinary expenses amounted to \$24,948,852, in addition to permanent and special appropriations amounting to \$12,240,000, making a total of \$37,188,852. This includes material increases of funds for marketing studies, the eradication of the cattle tick in the South, the combating of rabies in the Rocky Mountain States, and the farmers' cooperative demonstration work in the North and West. It inaugurates a market news service and studies of methods for obtaining potash on a commercial scale. It provides \$3,000,000 for additional purchases of forest lands in the White and Appalachian Mountains. Among the permanent appropriations are \$5,000,000 for construction of rural post roads, \$3,000,000 for meat inspection, and \$1,580,000 for cooperative agricultural extension work. The appropriation for printing and binding, carried in the Sundry Civil Act, was increased from \$500,000 to \$600,000.

In 1916 the Department issued 1038 new pub-

lications and a large number of reprints, aggregating more than 39,000,000 copies. The library now contains 138,000 books and pamphlets, mainly on agriculture and agricultural science, and currently receives 2280 periodicals.

There were 17,176 employees on July 1, 1916, of whom 3976 were employed in Washington. The number of women employed was 2145.

**UNITED STATES INDIAN TRAINING AND INDUSTRIAL SCHOOL.** See INDIAN TRAINING AND INDUSTRIAL SCHOOL.

**UNITED STATES MILITARY ACADEMY.** (West Point, N. Y.) On September 1, 1916, the beginning of the academic year, the total strength of the United States Corps of Cadets (students at the academy) was 769. Including all administrative officers the instructors numbered 128. On July 1st Col. (now General) Clarence Page Townsley, Coast Artillery Corps, U. S. A., was relieved as superintendent and commandant of the academy by Col. John Biddle (q.v.), Corps of Engineers, U. S. A. For the fiscal year ending July 1, 1916, the academy received from government appropriations \$279,553 and \$240,244 was disbursed. The library contains 95,000 volumes.

Important changes in West Point were contemplated in 1916 with a view to greatly enlarging its capacity. By an act of Congress approved May 4, 1916, the corps of cadets as now constituted consists of two from each Congressional district, two from each Territory, four from the District of Columbia, two from Porto Rico, four from each State at large, and 80 from the United States at large, 20 of whom are to be selected from among the honor graduates of educational institutions having officers of the regular army detailed as professors of military science and tactics. They are to be appointed by the President. The President is also authorized to appoint cadets from among enlisted men of the regular army and the national guard, between the ages of 19 and 22 years, who have served as enlisted men not less than one year. The total number selected is not to exceed 180 at one time. The increase provided for in this act is divided into four annual increments. Under the apportionment of members of Congress according to the 13th census, the number of cadets can reach a maximum of 1332.

The superintendent of the academy in his report for 1916 comments upon the change here noted and discusses the urgent need for new buildings to meet the increase. A board of officers consisting of Maj.-Gen. Hugh L. Scott, Maj.-Gen. Tasker H. Smith, Brig.-Gen. Enoch H. Crowder, Brig.-Gen. Henry T. McCain, and Colonel Townsley, the superintendent, approved plans which ask for increased appropriations totaling \$3,074,079. The chief items were: mess hall, barracks, hospital, and laundry (all for cadets); officers' quarters; new roads, quarry work, etc.; and fees of architect and consulting engineers. In addition, changes in the plant will continue to be made in accordance with improvement plans approved in 1904 and 1916. In his report, the superintendent urged that before candidates take the West Point entrance examination, they should be required to pass competitive entrance examinations in each district and State. He also advised that the military academy be made an exception to the operation of the detached service law so that officers

might be detailed as instructors for four years regardless of any other detached service they may have had. The report discusses the recently initiated plan of granting admission to the academy by certificate from certain schools and colleges as well as by examination. Such certificate applies only to mental qualifications. Out of 1058 candidates examined in the March and June entrance examinations, 124 qualified both mentally and physically in March and 67 in June. In the former month three Filipino candidates were examined and one qualified.

**UNITED STATES NATIONAL MUSEUM.** Various collections—scientific, historical, artistic, and industrial—belonging to the government are housed in the National Museum at Washington under the custody and supervision of the Smithsonian Institution (q.v.). Many of the investigators and explorers sent out by the Institution are officially connected with the Museum. The most important event of many years for the Museum and the Institution was the action of Mr. Charles L. Freer. In 1906 Mr. Freer presented to the Museum a collection of objects of art, stipulating that it remain in his ownership during his life. This condition he has now removed and the collection passes into the hands of the government. Mr. Freer also gave \$1,000,000 to erect a suitable building on the Smithsonian reservation in Washington. At the end of the year construction was about to begin, Mr. Charles A. Platt of New York serving as the architect. The original collection consisted of 2300 items. At the end of 1916 there were 5346, of which 535 were added during the year (23 paintings and sculptures by American artists and 512 oriental objects). The division of the National Museum which has charge of this collection is known as the National Gallery of Art. The Gallery also received during the year from the Department of State a collection of 82 drawings by contemporary French artists, presented to the people of the United States by the citizens of France in recognition of American war relief work.

Specimens to the number of 243,733 were received by the National Museum during the year in the following departments: Anthropology; zoölogy; botany, geology and mineralogy; paleontology; textiles, woods, and other animal and vegetable products; mineral technology; and National Gallery of Art. Important additions were made in the field of American history. Mr. Walter G. Peter loaned many objects once the property of General and Mrs. Washington, and the valuable loan collection of memorials of Gen. W. T. Sherman was given into the permanent keeping of the Museum. An important exhibition of the year was that arranged by the government in the Museum, February 21-27. Inspired by the "Safety First" idea, it was participated in by 20 government bureaus, the American National Red Cross, and the Washington metropolitan police department. During the week 35,447 visitors attended the exhibition. Richard Rathbun is assistant secretary, in charge of the Museum.

**UNITED STATES NAVAL ACADEMY.** (Annapolis, Md.) At the beginning of the academic year 1916-17 there were 1230 undergraduates (midshipmen) enrolled in the Naval Academy and 66 postgraduates. Including the postgraduate department, the faculty numbered

173. For the fiscal year ending June 30, 1917, the sum of \$703,946.92 was appropriated by Congress. The library contains 55,600 volumes. Much public attention was called to the academy when on February 11th Secretary Daniels approved a recommendation of the academy board that 82 midshipmen be dismissed for failure in their studies. Upon recommendation of the Navy Department, the 63rd Congress reenacted a law providing for the apportionment of two midshipmen to each member of Congress, but the succeeding Congress passed a bill increasing this number to three, thus providing for 531 additional midshipmen in a year. On February 16th President Wilson signed a bill which had passed the Senate without a dissenting vote, providing for increasing the entrance class at Annapolis by 300. This was one of the first of the national defense bills. Superintendent, Capt. Edward W. Eberle.

**UNITED STATES SHIPPING BOARD.** See SHIPPING BOARD, UNITED STATES.

**UNIVERSALISTS.** There were in the United States and its possessions in 1916, 58,300 members of this denomination. They had also 662 ministers and 865 churches. This represented a gain over 1915 of 3300 members, 6 ministers, and 102 churches. The Sunday schools had over 50,000 pupils. The Commission on Social Service, established in 1910, carries on social work, and in 1916 continued the educational task of stimulating interest in the subject among ministers, divinity students, men's clubs, women's societies, and young people's societies. Social service information is exchanged through the church press, and social service topics are discussed at church gatherings. The denomination carries on foreign missionary work in Japan and China. The institutions of higher education are: Tufts College, at Medford, Mass.; St. Lawrence University, Canton, N. Y.; Buchtel College, Akron, Ohio; and Lombard College, Galesburg, Ill.

**UNIVERSITIES AND COLLEGES. BENEFACCTIONS FOR HIGHER EDUCATION.** The report of the United States Bureau of Education shows that the sum of \$31,357,398 was given and bequeathed to education in 1914. Of this amount \$26,670,017 was for universities and colleges, \$1,558,281 for theological schools, and \$1,495,773 for law schools. The report shows that since 1896 sums aggregating \$407,000,000 have been given by private donors. During 1916 the following institutions have reported gifts and bequests of \$100,000 or more: Amherst College received \$250,000 for a library and \$100,000 from Mrs. Rufus Pratt Lincoln; Columbia University, \$600,000 from an anonymous donor to construct a building for the School of Business, \$10,000 from Mr. James N. Jarvie, and \$100,000 from the estate of Emil C. Bondy; Davis and Elkins College, \$100,000 by will of Henry Gassoway Davis; Haverford College, \$409,321 from T. Wistar Brown and \$100,000 by wills of Edith and Walter Scull; Johns Hopkins University, \$150,000 by will of Miss Jessie Gillender; Lafayette College, about \$250,000 as residuary legatee of Albert N. Seip; Massachusetts Institute of Technology, a total of \$2,200,000—\$800,000 coming from members of the DuPont family and \$200,000 from four alumni; Northwestern University, \$134,000 from Mr. James A. Pattan; Princeton University, by will of William Watson Lawrence, received residue of estate

valued at \$750,000; Union Theological Seminary, \$1,840,000 from an anonymous giver; University of Buffalo, actual and provisional gifts to the amount of \$750,000; University of Chicago, for new medical school, \$4,000,000, and \$300,000 from Mr. Frederick H. Rawson; University of Pennsylvania, \$400,000 by will of Dr. J. William White and also gift of \$600,000; University of Vermont, \$100,000 from Gen. Rush C. Hawkins; University of Virginia, \$250,000 from anonymous giver; Vassar College, completed endowment of \$1,000,000; Washington Medical School, \$1,000,000 from anonymous giver; Wellesley College, \$150,000 from a graduate; Western Reserve University, about \$500,000 by will of Robert R. Rodes and \$110,000 from John L. Severance; Yale University, \$500,000 by will of Charles W. Harkness.

**CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING.** The 10th annual report of the president and of the treasurer of the Carnegie Foundation for the Advancement of Teaching was issued during the early part of 1916. It covers the year ending Sept. 30, 1915. The report shows that the total assets of the General Endowment are \$14,129,000 and of the endowment of the Division of Educational Enquiry \$1,250,000. The income from the General Endowment was \$697,892.54 and from the endowment of the Division of Educational Enquiry \$50,300.50. The total expenditures from the General Endowment were \$712,852.78. Of this sum \$473,989.38 was granted as retiring allowances and pensions to 257 professors and officers in accepted institutions, \$99,850.81 as retiring allowances and pensions to 70 professors and officers now in accepted institutions, \$80,152.31 to 97 widows of professors and officers in accepted institutions, and \$20,752.47 to 27 widows of professors and officers not in accepted institutions. The average amount of allowance for professors and officers on the accepted list was \$1900 on the basis of age or service, and \$1280 on the basis of disability. The average allowance for widows of professors and officers in accepted institutions was \$940. The expenses of administration were \$36,550.93. The total expense of the Division of Educational Enquiry was \$54,633.62. The cash balance of the General Endowment was \$104,673.63, and of the Division of Educational Enquiry \$4016.64. The report states that during the year the Foundation had studied engineering education in cooperation with a joint committee of the National Engineering Society. A study of the training of teachers in Missouri was also in progress.

**COLLEGE ADMISSION REQUIREMENTS.** Four women's colleges, Mount Holyoke, Smith, Vassar, and Wellesley, have announced a new method of admission to supersede the present system of admission by certificate. In 1919 the new method will entirely replace admission by certificate and it may be used earlier if desired. The present method of admission by examination in all subjects will be continued as an alternative to the new plan. No change is made in the subjects now required for admission; no addition nor diminution in the amount prescribed for admission is proposed. The new plan is similar to that adopted by Harvard, Princeton, and Yale in prescribing a test of the quality of the applicant's scholarship and intellectual power.

The examinations required in this plan are

of the type known as comprehensive examinations to be offered by the College Entrance Examination Board beginning in June, 1916.

The new method depends on two kinds of evidence:

1. Evidence submitted by the school, consisting of
  - a. A school report covering the entire record of subjects and grades for four years.
  - b. A statement from the school principal including an estimate of the applicant's scholarly interests, special ability, and character.
2. Evidence submitted by the candidate, consisting of four comprehensive examinations, selected from each of the following groups:
  - (1) English or History, selected by the applicant.
  - (2) A foreign language, selected by the applicant.
  - (3) Mathematics, or chemistry, or physics, selected by the applicant.
  - (4) A fourth subject, designated by the applicant from the subjects which may be offered for admission. This choice must be approved by the Committee on Admission of the respective colleges.

These four examinations must be taken at one time.

At least two examinations must cover more than two admission units each.

In each subject chosen the comprehensive examination covering all the units offered by her for admission must be taken by the applicant.

Under the new plan the candidate, if admitted to college, will be admitted free from all conditions. Failure to meet completely the standard in both kinds of evidence required will not necessarily involve the rejection of the applicant; the committee may accept unusual excellence in one part of the credentials submitted as offsetting unsatisfactory evidence or even failure in another part. If the candidate fails of admission in June she will not be debarred from taking examinations under the old system in September, but she may not take the comprehensive examinations for admission under the new plan before June of the following year.

This plan substitutes a uniform method of administration in place of the various certificate forms now used by the four colleges and gives the preparatory school entire freedom in the sequence of its work, making no requirements of certain subjects in the last years.

Comprehensive examinations according to the new plan will be given by the College Entrance Examination Board in June, 1916, and thereafter, and applicants may enter college by satisfying these tests and furnishing the required evidence from their schools at any examination period before 1919, though this new plan will not entirely supersede admission by certificate until that date.

Other universities have also made changes in their entrance requirements. The University of Wisconsin has established a course leading to the degree of Bachelor of Philosophy. The requirements of this course will be similar to those for the Bachelor of Arts degree except that a more extensive study of English, natural sciences, and mathematics will be required in

place of a foreign language. "The entrance requirements of the College of Letters and Science have been changed so that the six units required of all students are two units of English, two units of mathematics, and two units of foreign language or science or history."

After 1920 Syracuse University will grant but one degree in the College of Liberal Arts. This will be the degree of Bachelor of Arts. Latin has been made optional as an entrance requirement.

The trustees of Columbia College at their May meeting abolished Latin as a required subject in the college curriculum. They have also abolished the degree of Bachelor of Science. "Hereafter all students registered in Columbia College, whether they take the 'straight college' course or one of the combined courses (college and law, college and medicine, and the like), will be candidates for the degree of Bachelor of Arts." The *Columbia Alumni News*, commenting on this departure, says, "It is a good thing for the classics to be put on a strictly voluntary basis. A man studies better the subject of his choosing than the subject prescribed for him. The department has already proved, by its popular sophomore courses, that it can attract and hold men beyond the minimum requirement, and under the new régime the courses in freshman Latin ought to show that the classics can be taught in such a way as to demonstrate their value even to the somewhat obtuse and skeptical freshman mind." The degree of B.S. will now be given by the university only upon the completion of work in one of the scientific schools. The degree of B.S. in medicine will be given at the end of two years of work in the Medical School following two years of college work.

**FACULTY PARTICIPATION IN COLLEGE AND UNIVERSITY ADMINISTRATION.** Various cases of alleged breach of academic freedom involving Lafayette College, the University of Utah, and the University of Pennsylvania have served to call attention to the need of some method of faculty participation in the administration of colleges and universities. During 1916 several institutions took important steps in this direction. On April 29th the trustees of Cornell University adopted the following resolutions:

*A Resolved*, That the faculty of each college located at Ithaca, except the State colleges, be invited from time to time to select two of its members who, with the dean of such a faculty, shall constitute a committee to meet as often as desired with the committee on general administration, the committee on finance, or the committee on buildings and grounds (according to the nature of the matter) for the consideration of questions affecting the welfare of such college; that the members of such committee other than the dean shall be selected by ballot and for definite terms or as each occasion for conference arises and under such conditions as may be provided by the faculty selecting them.

*B Resolved*, That the university faculty be authorized and invited for and during the period of three years commencing June 1st next to select delegates who shall represent it in the board of trustees. Said representatives shall not at any time exceed three in number. They and their successors shall be selected by ballot and for such terms, respectively, not extending beyond the period above mentioned, as shall be fixed

by the faculty. They shall have the right to meet with the board of trustees and the committee on general administration and shall possess the usual powers of trustees except the right to vote.

Early in June a special meeting of the university faculty was called and three professors were duly elected professorial trustees by ballot.

Upon the resignation of President A. W. Harris of Northwestern University the Board of Trustees decided that no president should be elected. The board appointed a committee to formulate and report a plan for the administering of the university work. The proposals presented contained the following provisions:

1. The trustees shall elect a president *ad interim* as general executive officer of the university with power of initiative within certain defined limits.

2. Recommendations on matters of educational policy, before going to the trustees for adoption, shall be laid before the university council, and the findings of the council shall be reported to the trustees.

The university council as at present constituted consists of the deans and directors of the various schools and an equal number, or nearly so, of members elected by the faculties. The deans recommended that the council be enlarged by doubling the number of elective members.

3. The deans and directors shall constitute an administrative board before which shall be laid any matter concerning two or more schools, not involving a question of policy. Matters affecting a single school shall be presented to the dean of that school before going to the trustees.

On April 10th the Board of Trustees of the University of Pennsylvania passed an amendment to its statutes making it possible for the alumni to select members for the board of trustees. In explanation it was stated by a member of the board "that the plan had been worked out to avoid the undesirability of an amendment to the charter granted to the university by the State, which states that the board shall fill two out of every three vacancies, the alumni being privileged to name candidates for the board in the third vacancy. 'It is an endeavor to retain in the board the actual power to elect its own members called for by the charter,' he said, 'but it expresses the board's willingness to confine its choice within the lines indicated.'"

A committee of the directors of Bryn Mawr, after consultation with the members of the faculty, reported the following recommendations regarding faculty participation in the government of the college:

1. Representation at meetings of the board of directors.

2. A committee elected by the faculty to make recommendations to the directors as to reappointments and terminations of appointments.

3. Provisions safeguarding the tenure of office of full professors after a certain number of years of service.

In conformity with these recommendations a definite plan outlining the duties and responsibilities of the president, the faculty, the academic council, the senate, and the officers of instruction was adopted.

**GENERAL EDUCATION BOARD.** The General Education Board issued its annual report for the fiscal year 1914-15 during the early part of 1916. The report shows that during its exist-

ence the board had appropriated directly \$16,862,147.71. Of this amount \$10,848,064.07 had been paid and the remainder was awaiting the fulfillment of the conditions under which the money had been appropriated to the various institutions. Universities and colleges had received appropriations amounting to \$11,672,460.16 and medical schools \$2,870,874.11. The resources of the board amounted to \$33,958,848.40. The gross income for 1915 was \$2,230,425.41. The board announced the following important appropriations during 1916:

Maryville College, \$75,000 toward an endowment fund of \$300,000; Western College for Women, \$100,000 toward an endowment fund of \$500,000; Milwaukee-Downer College for Women, \$100,000 toward an endowment fund of \$500,000; Washington University, \$250,000; Coker College, \$50,000; Colby College, \$125,000; Rockford College, \$75,000; Albion College, \$100,000; George Peabody College for Teachers, \$200,000; Hamline University, \$100,000.

The General Education Board in cooperation with the Rockefeller Foundation has appropriated \$2,000,000 to the University of Chicago for the establishment of a medical school. The university is required to appropriate at least the same amount. The new school will start with an initial endowment of almost \$8,000,000.

**NEW PRESIDENTS.** During 1916 the following college presidents were elected: David R. Kerr, Bellevue College; Howard C. Parmalee, Colorado State School of Mines; J. G. Crabbe, Colorado State Teachers College; Ernest Martin Hopkins, Dartmouth College; Weir C. Kelter, Grove City College; A. S. MacKenzie, Lenox College; Joseph M. Tilden, Lombard College; Mrs. Aurelia Henry Reinhardt, Mills College; U. G. Leazenby, Moores Hill College; U. V. W. Darlington, Morris-Harvey College; Thomas Franklin Kane, Olivet College; James W. Campbell, Simpson College; Mrs. Emilie McVea, Sweetbriar College for Women; Henry W. Elson, Thiel College; Walter A. Jessup, University of Iowa; Robert R. Moton (principal), Tuskegee Institute; J. A. Widtsoe, University of Utah; Robert E. Vinson, University of Texas; Chauncey P. Colgrove, Upper Iowa University; Wallace B. Fleming, West Virginia Wesleyan College; Ethelbert D. Warfield, Wilson College; J. Campbell White, College of Wooster.

During the year Dr. George L. Vincent, president of the University of Minnesota, resigned to accept the presidency of the Rockefeller Foundation, succeeding John D. Rockefeller, Jr. (See ROCKEFELLER PHILANTHROPIC BOARDS.)

**NEW SCHOOLS AND DEPARTMENTS.** The trustees of Columbia University provided for the establishment of a School of Business. The new school opened for instruction in September. The work within the school will consist of the theoretical basis of business and then as far as possible practical training will be given. The courses are at present designed for the college student who may choose to begin this work at the close of his sophomore year. One of the objects will be to prepare students thoroughly for the State examination for the certificate of certified public accountant. The National City Bank has offered scholarships to students recommended by this school and by others in order to equip graduates for work in the foreign departments of their institution. The school will re-

ceive graduate students who are candidates for higher degrees, students who have spent at least two years in some approved college, high school graduates who have completed through extension work the equivalent of the first two years of a college course, and students over 21 years of age who are actively engaged in business and who are qualified to undertake certain courses. The latter will be admitted as special students but not as candidates for a degree. It will be open to both men and women.

The Rockefeller Foundation has established an Institute of Hygiene and Public Health in connection with Johns Hopkins University. This institution will devote its attention to the problems of sanitation in cities and men will be trained to meet these problems. The announcement says: "The possibilities of usefulness of men so equipped have been found to be without limit in such efforts as those made by the American Red Cross in combating typhus in Serbia and by the International Health Board of the Rockefeller Foundation in its campaign against hookworm disease throughout the world.

"An institute of hygiene will become the central feature of the new school. Funds will be provided by the foundation for the erection of a suitable building in proximity to the hospital and the medical laboratories of Johns Hopkins University. In this building will be housed various laboratories and departments needed in such a school, such as those of sanitary chemistry, of physiology as applied to hygiene, of bacteriology and protozoology, of epidemiology and industrial hygiene, of vital statistics, a museum, and library. Additional facilities for instruction and research will be supplied by the schools of medicine, engineering, and social science, the hospital, and other departments of the university. Funds will be provided by the foundation for the maintenance and development of the school in accordance with plans which are being matured. No pains will be spared to develop an institution which, in its own field, will compare in usefulness with the Rockefeller Institute for Medical Research."

The Yale University Corporation voted to admit hereafter to their school of medicine a limited number of graduates of approved women's colleges.

The trustees of Columbia University also voted to admit women to their school of medicine. The date at which these may be admitted was left uncertain and was made contingent upon the college's ability to provide proper accommodations.

The first school to be devoted exclusively to the training of women to become dental hygienists was opened in New York City in connection with Hunter College and the Vanderbilt Dental Clinic of the College of Physicians and Surgeons, Columbia University. Under the Seeley Bill passed by the State Legislature the women will be graduated as dental hygienists. In addition to the practical instruction the students will devote a number of hours each week to work in the Vanderbilt Dental Clinic under supervision of specialists.

**PENSIONS FOR COLLEGE TEACHERS.** Under date of April 15, 1916, President Henry S. Pritchett of the Carnegie Foundation for the Advancement of Teaching issued "A Comprehensive Plan of Insurance and Annuities for College Teachers," President Pritchett had sub-

mitted the plan to the trustees of the foundation in November, 1915. They took no action concerning it except to express their approval of the president's efforts and to request that the report be presented to the associated institutions for their careful consideration and for suggestions. The new plan of insurance and annuities to take the place of the present pension system has called forth the most intense discussions on the part of college instructors and their institutions. The pension system which is at present in force provides the following benefits:

"1. An old-age pension available at age 65 or later and amounting usually to something like 60 per cent of the active pay of the teacher during the last five years of service. The rules are so framed that the teacher having very small pay receives a larger proportion. Thus the pension of a teacher whose salary is \$3000 is \$1900; the pension of the teacher whose salary for the last five years was \$1200 would be \$1000.

"2. A disability pension granted in cases of total disability, but only after 25 years of service as professor or 30 years of service as professor and instructor. This benefit amounts on the average to something like 40 per cent of the active pay.

"3. To the widows of teachers who have fulfilled either of these two conditions a pension is paid equivalent to one-half of that which the husband either was receiving or to which he was eligible."

Seventy-three institutions are associated in the enjoyment of these pension benefits. For the year 1914-15 there were 289 pensioned teachers, 95 pensioned widows, and the total annual payment was \$554,121.69. The report points out the fact that the pension system is "costing at the present time something over two-thirds of the income available to the foundation. According to actuarial computations its ultimate loan would be somewhere between one million and one million and three-quarters annually, according to the working of certain factors."

Among the faults of the present system are these: "It is available for only a limited number of universities and colleges. It restricts the migration of teachers from one institution to another. It has been considered part of the teacher's compensation, and a substitute for increased salary. It has resulted in the adoption by numerous institutions of a fixed age for retirement, which is unfortunate. It provides no protection for the teacher until he has been a professor for 25 years. A system of free pensions relieves both the teacher and his institution from an economic and moral responsibility. No pension system which is based, as practically all present systems are, upon future salaries, can calculate its future obligations or place them upon a contractual basis."

In place of the present system of pensions the president of the foundation "proposes a system of term insurance to the age of 65 or later, followed by an annuity for life, accumulated by contributions from the teacher and his institution. The foundation will contribute protection against disability, and guarantee pensions for widows, a good rate of interest on all accumulations, and all expenses of administration, using its entire income, as at present, for

the maintenance and development of the system. This plan may be extended to a larger number of institutions than the 73 now associated with the foundation, it will be conducted under the scrutiny of the State banking and insurance departments, the teachers will participate in its direction, and each contributor will have a contract guaranteeing definite benefits."

The board announced that "whatever plan is finally adopted will be devised with scrupulous regard to the privileges and expectations which have been created under existing rules."

A committee of the American Association of University Professors consisting of representatives from some 20 of the larger institutions has issued a report on this proposed plan. They ask that more definite information be secured and interpreted before any change is made and that the representatives of the American Association of University Professors be permitted to be present and to be heard at the meeting of the trustees. They also urge that "the consideration of this and other problems affecting the interests of university teachers would be facilitated and greater coöperation insured if the policy were adopted of electing university teachers to the board of trustees of the Carnegie Foundation from time to time as opportunity presents." Committees representing the various interested bodies have been invited by President Pritchett to coöperate with him in formulating plans that will be acceptable to all concerned.

**SURVEYS OF HIGHER EDUCATIONAL INSTITUTIONS. 1. Iowa.** In the early part of 1915 the Iowa State Board of Education requested the Hon. P. P. Claxton, United States Commissioner of Education, to make a survey of the institutions of higher learning in the State. More particularly the State board desired to have definite information regarding the matter of duplication of courses between its three institutions. Commissioner Claxton accepted the invitation and associated with himself the following persons: Dr. James R. Angell, University of Chicago; Dr. Kendrick C. Babcock, University of Illinois; Dr. Liberty H. Bailey, formerly director of the New York State College of Agriculture; Dr. Hollis Godfrey, president of Drexel Institute; Dr. Raymond M. Hughes, president of Miami University; and Dr. Samuel P. Capen, specialist in higher education of the Bureau of Education, who acted as chairman. The report of the Survey Commission was issued as Bulletin, 1916, No. 19, of the Bureau of Education. Chapter 3 deals with duplication and the principle of major lines. The summary of recommendations states:

- "1. The adoption of the principle of 'major and service lines of work' at the three State institutions.
- "2. The creation of a conference consisting of members of the faculties of the institutions and the State Board of Education to adjust questions of overlapping not automatically determined by the establishment of major lines for each institution.
- "3. The readjustment of the work in engineering at the State university and the State college, according to one of three methods:
  - (a) A horizontal division, assigning graduate work to one school and undergraduate work to the other.

- (b) The union of the two schools at one place.
- (c) A vertical division of work, assigning some branches of engineering to one institution and some to the other.
- "4. The discontinuance of the last two years in liberal arts at the Iowa State Teachers College, with suggestion of three-year non-degree courses for rural and grade teachers.
- "5. The enlargement of facilities for practice teaching at the State Teachers College.
- "6. The establishment of additional normal schools.
- "7. The addition of men to the faculty of the State Teachers College, to give half of their time to instruction and half as members of the staff of the State Superintendent of Public Instruction and the supervision of work in the normal-training high schools."

"By the principle of 'major and service lines,' each State educational institution has assigned to it certain 'major' fields which it may develop to the fullest extent. 'Service' lines are such subordinate subjects as are essential to the proper cultivation of a 'major' line. For example, agriculture at the Iowa State College of Agriculture and Mechanic Arts is a 'major' line, and English a 'service' line. On the other hand, English is described as a 'major' line at the State University and a 'service' line at the State College. On this principle no State would attempt to maintain two or more extensive and elaborate educational plants doing the same type of special work in the same field, and no institution would duplicate the work of another except to the extent that such work is necessary to the main task of the college."

2. *Washington.* The United States Commissioner of Education conducted an education survey of the State of Washington. The report, consisting of three sections, deals with higher education, public schools, and the State normal schools. The question of duplication of work in the higher institutions is considered in detail. The report states that "in the judgment of the committee the most important reform which may be wrought in the public education in Washington is the provision for the definite and permanent coördination of higher institutions." It suggests different methods for bringing about such coördination. As in the case of Iowa, the committee recommends the recognition of "major and service lines of work."

3. *North Dakota.* A survey commission has made recommendations to the Board of Regents of North Dakota relative to the readjustment of courses in the educational institutions of the State. The purpose is to prevent wasteful duplication. According to the recommendations the State University should be made an institution for professional and classical work and for the training of teachers for high schools, county superintendents, and supervisors. The agricultural college should deal with agriculture, vocational and industrial education, and also train teachers in these subjects. Farm engineering should be given a more important place in the college and a strong home economics department should be built up. The commission also proposes a division of work between the normal schools and recommends the establishment of a

fourth State normal school. The State School of Forestry should abandon forestry as its primary work and devote its efforts to building up a high-class school correlating with the State Agricultural College.

**TUITION CHARGES IN COLLEGES.** The 10th annual report of the president and of the treasurer of the Carnegie Foundation for the Advancement of Teaching presents a detailed statement of tuition charges for the past 10 years as reported by each of 100 representative institutions. The representative or medium fee has increased during the decade from about \$80 to about \$100. Twenty-nine of these institutions made no change in their charges during these 10 years. Fifteen other institutions report no charge for tuition. These, with one exception, are institutions supported by public funds. Three institutions reduced their charges during this period. There is a general tendency to include all incidental charges in the increased tuition. See also **ARCHITECTURE.**

**UNTERMAYER, LOUIS.** See **LITERATURE, ENGLISH AND AMERICAN, Poetry, American.**

**UPPER SENEGAL AND NIGER.** A colony of French West Africa (q.v.).

**URANUS.** See **ASTRONOMY.**

**URBAN, JOSEF.** See **DRAMA.**

**URUGUAY.** A South American republic bounded by Brazil and Argentina and bordering the Atlantic Ocean and the Rio de la Plata. The capital is Montevideo.

**AREA, POPULATION, ETC.** A planimetric calculation of the area of Uruguay shows that the 19 departments comprising the republic cover 186,925 square kilometers (68,996 square miles). Other published estimates of the area are 72,172 square miles, 72,153 square miles, and 72,210 square miles. The estimated population in 1915 was about 1,400,000; it seems not unlikely that this figure is somewhat excessive. The 1908 census returned a population of 1,042,686 (530,508 males, 512,178 females). Natives numbered 861,464, and foreigners 180,722; of the latter, 62,357 were Italians, 54,885 Spaniards, 27,789 Brazilians, and 18,600 Argentines. The population of the city of Montevideo, which was 291,465 at the 1908 census, was estimated at 378,446 at the end of 1915. Paysandú had, in 1908, 20,953 inhabitants; Salto, 19,788; Mercedes, 15,667.

In 1908, the population over five years of age numbered 873,231, of whom 347,491 were illiterate. Primary instruction is nominally compulsory. In 1914, public primary schools numbered 997, with an enrollment of 94,940; private schools, 219, with an enrollment of 20,006. There are several secondary, normal, and special schools, many religious seminaries, and at Montevideo an important university.

**INDUSTRIES AND COMMERCE.** Among Uruguay's industries the raising of live stock continues to hold first place. The estimated number of sheep is about 27,000,000, Uruguay thus having more sheep per square mile than any other country of the world. Cattle number upwards of 8,200,000. The number of horses returned by the live stock census of 1908 was 556,307. The wool clip constitutes one of the chief sources of wealth. Jerked beef is an important product, being exported to Brazil, Cuba, Porto Rico, etc. Much of the cattle supply is consumed by the frozen-beef and beef-extract establishments. Without minimizing the im-

portance of stock-farming, the government realizes that the essential requirement of permanent national prosperity is cultivation of the soil; hence, by the distribution of large quantities of seed, especially wheat, and in other ways, the government encourages agriculture. A falling off in cereal production was expected in the crop year 1916-17 on account of drought and locusts.

The table below shows the area, in hectares, of cereal crops, the production in metric quintals, and the yield per hectare in the crop year 1915-16:

	Hectares		Quintals		Qs.
	1914-15	1915-16	1914-15	1915-16	
Wheat ..	316,962	384,290	978,551	2,685,433	7.0
Corn ....	318,501	.....	2,891,082	.....	..
Oats ....	33,149	42,518	185,458	331,333	7.8
Barley ..	2,113	3,924	8,619	25,126	6.4
Linseed ..	40,923	17,863	149,388	99,217	5.6
Rye .....	76	30	250	184	6.1
Canary seed ..	.....	2,371	.....	13,350	5.6

Other products include wine, olives, and tobacco.

Imports of merchandise for consumption and exports of domestic produce have been reported as follows, in thousands of pesos (par value of peso, \$1.03424):

	1910	1911	1912	1913	1914	1915
Imports ..	40,814	44,798	49,380	48,717	37,235	34,780
Exports ..	41,023	44,537	53,042	62,637	58,234	73,291

The principal imports include provisions, cotton goods, manufactures of iron and steel, and building materials. The exports are almost wholly products of grazing and the meat industry. Thus, in 1915, out of a total export value of 73,290,671 pesos grazing and the meat industry were credited with 70,535,539 pesos; the more important classes were: meats and extracts, 30,333,922 pesos; wool, 20,089,178; hides and skins, 16,663,120; grease and tallow, 1,540,475; live animals, 1,088,874.

For the period September, 1915-February, 1916, the reported value of imports was 18,453,177 pesos, and of exports 30,170,926 pesos. Imports from and exports to the United States in this period were 4,653,910 and 5,963,547 pesos respectively; Argentina, 3,693,205 and 4,946,587; United Kingdom, 3,341,942 and 4,567,671; Brazil, 2,291,066 and 395,609; Spain, 1,211,925 and 1,791,670; Italy, 1,096,560 and 6,225,300; France, 964,639 and 5,151,708.

Shipping entered in 1914 totaled 12,092,482 tons; cleared, 12,028,456 tons.

COMMUNICATIONS. Uruguay has about 2240 miles of national roads and about 3100 miles of departmental roads. There are open to traffic about 1600 miles of railway (standard gauge), of which about five-eighths are under government guarantee. There has been train service between Montevideo and Porto Alegre, Brazil, since May, 1913.

FINANCE. The standard of value is gold. The monetary unit is the peso; its par value is \$1.03424. The budget for the fiscal year ending June 30, 1917, showed estimated revenue of 29,086,428 pesos and estimated expenditure of 29,406,445 pesos. The principal estimated receipts were as follows: customs duties, 12,500,000 pesos; property tax, 4,160,000; trade licenses,

1,600,000; tax on alcohol, spirits, wines, beer, tobacco, medicines, sugar, matches, live stock, and inheritance, 3,890,000; other taxes and stamps, 7,376,428. Larger estimated disbursements: for the public debt, 8,506,349 pesos; war and marine, 5,185,549; interior, 3,277,982; public instruction, 3,276,972; pensions, etc., 2,361,277; finance, 2,104,248; public works, 1,376,500. The foreign debt at the end of 1914 amounted to 141,144,140 pesos, consisting of the foreign consolidated debt of 121,482,175, the international debt of 2,135,000 pesos, and the internal debt of 17,526,465 pesos.

GOVERNMENT. The executive power is vested in a president, elected for four years by the General Assembly and ineligible for the next term. In case of the president's death or disability, the presiding officer of the Senate assumes the presidency. The president is assisted by a cabinet, appointed by himself and responsible to the House of Representatives. The legislative power is exercised by the General Assembly, or Congress, consisting of the Senate and the House of Representatives. Senators, 19 in number, one for each department, are elected by indirect vote for six years. Representatives, 90 in number, are elected by popular vote for three years. The franchise is held by male citizens over 20 years of age. The president in 1916 was Feliciano Viera, elected for the term ending March 1, 1919, in succession to José Batlle y Ordóñez.

UTAH. POPULATION. The estimated population of the State on Dec. 31, 1916, was 438,974. The population in 1910 was 373,351.

The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16 were as follows:

	Acreage	Prod. Bu.	Value
Corn .....	1916 13,000	429,000	\$493,000
	1915 13,000	442,000	354,000
Wheat ....	1916 326,000	6,900,000	10,488,000
	1915 320,000	8,225,000	7,074,000
Oats .....	1916 103,000	4,480,000	2,733,000
	1915 100,000	4,700,000	2,115,000
Potatoes ...	1916 20,000	3,600,000	4,680,000
	1915 20,000	2,500,000	1,575,000
Hay .....	1916 384,000	8,445,000	12,675,000
	1915 394,000	985,000	7,880,000
Rye .....	1916 12,000	144,000	144,000
	1915 13,000	202,000	181,000
Barley ....	1916 34,000	1,224,000	930,000
	1915 34,000	1,445,000	751,000

a Tons.

MANUFACTURES. The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments ..	749	1,109
Average number of wage earners .....	11,785	13,894
Capital invested .....	\$52,627,000	\$71,843,000
Wages .....	8,400,000	10,852,000
The value of materials used ..	41,266,000	62,233,000
The value of products .....	61,989,000	87,112,000

MINERAL PRODUCTION. The estimated coal production was 3,500,000 tons, which is the largest amount produced up to this time. This was an increase of 391,000 tons, or nearly 13

per cent. Except for short periods of car shortage the transportation facilities were ample for the first 10 months of 1916, but in November and December the car supply was reduced, and the production was somewhat curtailed. In the latter part of the year there was a considerable shortage of labor. The consumption of Utah coal by railroads increased, and the market on the Pacific Coast was extended largely by reason of the decrease in the water-borne fuel from Australia and Japan, and from the Atlantic coast of the United States. The activity of the smelter and metal mines was a large factor in causing the output of both coal and coke.

The value of gold, silver, copper, and zinc was \$55,105,070, an increase of \$17,953,477 compared with 1914. More than 59 per cent of the total value was for copper. The production of gold increased from \$3,265,347 in 1914 to \$3,609,109 in 1915, and silver increased from \$6,168,669 to \$6,242,795. Lead increased in value \$2,176,868 over 1914, while zinc showed an increase from \$815,453 in 1914 to \$3,012,238 in 1915. The value of the gold produced in 1915 was \$3,609,109, an increase of \$343,762 over 1914. The silver production was 12,313,205 ounces, valued at \$6,242,795, an increase of 1,158,289 ounces in quantity, and \$74,126 in value. The mined production of copper in 1915 was 187,671,188 pounds, valued at \$32,842,458, an increase of 35,637,186 pounds in quantity, and \$12,621,936 in value. The production of lead in 1915 was 199,957,437 pounds, or 28,644,300 pounds more than the output of 1914. The production of 1915 was the largest in the history of the State. The production of zinc in 1915 was 24,292,240 pounds, valued at \$3,012,238, compared with 15,989,267 pounds, valued at \$815,953 in 1914.

The mining in Utah established a new record in 1916. The output of gold, silver, copper, lead, and zinc had a total value of about \$97,000,000, according to the estimates of the United States Geological Survey. This is an increase of nearly 77 per cent or \$42,000,000 over the output of 1915. All the metals showed increases, and there were record outputs of copper, lead, and zinc. About 14,000,000 tons of ore were mined in 1916, compared with 10,451,445 tons in 1915. The gold output showed a slight increase from \$3,609,109 in 1915 to \$3,647,000 in 1916. The production of silver was 8 per cent greater in 1916 than in 1915, increasing from 12,313,205 ounces in 1915 to 13,357,000 ounces in 1916, amounting to an increase of over \$2,500,000. The copper production of the State in 1916 broke all records, increasing from 187,671,188 pounds in 1915 to 242,000,000 in 1916, an increase of 29 per cent in quantity, and over \$33,000 in value. The lead production also surpassed all former records, increasing from 199,957,437 pounds in 1915 to over 215,000,000 pounds in 1916, an increase of about 7 per cent in quantity, and over \$5,000,000 in value. The metallic zinc produced amounted to about 29,000,000 pounds, compared with 24,292,240 pounds in 1915. The increase in value was nearly \$1,000,000.

TRANSPORTATION. The railway mileage in 1915, the latest date for which statistics are available, was 2354. The railways having the longest mileage are the Denver and Rio Grande, 762; Central Pacific, 273; the Oregon Short Line,

242; San Pedro, Los Angeles, and Salt Lake, 498; Western Pacific, 121; Union Pacific, 75.

EDUCATION. The total school population of the State in 1916 was 128,344. The total enrollment was 108,369. The average daily attendance was 87,655. The female teachers numbered 2252, and the male teachers 917. The average yearly salary of male teachers was \$879, and of females \$656.

FINANCE. The latest available figures are for the fiscal year 1915. The receipts for that year amounted to \$4,358,004. The total disbursements amounted to \$4,889,893. There was a balance on Nov. 30, 1914, of \$1,366,482, and a balance on Nov. 30, 1915, of \$834,953. The principal items of expenditures are for the maintenance of State institutions, and for State roads. The bonded debt at the close of the year amounted to \$3,060,000.

CHARITIES AND CORRECTIONS. The charitable and correctional institutions include State Industrial School, State Mental Hospital, State Prison, and the State School for the Deaf and Blind.

POLITICS AND GOVERNMENT. Utah furnished one of the chief surprises of the election. The State has for many years been strongly Republican, and in 1912 was one of two States, the other being Vermont, which cast its vote for Mr. Taft. In the election of 1916 the Democrats succeeded in defeating for United States Senator George Sutherland, who for many years had represented the State in the Senate. His opponent, William H. King, who was the candidate of the Democrats and Progressives, received 80,895 votes, compared with 56,862 cast for Sutherland. The Socialist candidate received 4497 votes. The Democrats also elected their candidate for Governor, Simon Bamberger, defeating M. L. Morris, Republican. Candidate Bamberger received 73,298 votes, Morris 59,522. The Democrats elected two congressmen and all the State officers. For President, Wilson received 84,025 votes, and Hughes 54,136. The overturn of the Republican party in the State was due chiefly to local conditions.

STATE OFFICERS. Governor, Simon Bamberger; Secretary of State, Harden Bennion; Attorney-General, Dan B. Shields; State Auditor, Joseph Ririe; State Treasurer, D. O. Larson; Superintendent of Public Instruction, E. G. Gowans.

JUDICIARY. Supreme Court: Chief Justice, J. E. Frick; Justices, W. M. McCarty and Corfman; Clerk, H. W. Griffith.

STATE LEGISLATURE:

	Senate	House	Joint Ballot
Democrats .....	13	42	55
Republicans .....	3	..	3
Progressives * .....	2	3	5
Socialists .....	0	1	1
Democratic majority..	8	38	46

\* Progressives were elected on a fusion ticket.

UTAH, UNIVERSITY OF. A co-educational State institution at Salt Lake City, Utah. It was founded in 1850. In the academic year 1915-16 there were 2835 students and the faculty numbered 125. During the year Dr. John Andreas Widsøe, formerly president of the Agricultural College of Utah, was appointed president of the university and Elbert D.

Thomas acting secretary. The percentage of the State tax allowed the university yields, with other sources of revenue, an average annual income of \$300,000. There are 40,012 bound volumes in the library, and 18,625 pamphlets. The library is the United States depository for Utah and also a depository of the Carnegie Institution of Washington.

**VACCINATION.** Another contribution to this question is that of Gins, who states that 500 men and 500 women were recently vaccinated at Berlin against smallpox before they were allowed to serve as nurses to the wounded. The reaction to the vaccination was recorded in each instance and classified according to four grades of intensity. Ten responded with a typical pustule, among those under 20; 16.9 per cent of those between 21 and 25; 19 per cent, 26 to 30; 30.4 per cent, 31 to 35; 62.7 per cent, 36 to 40; and over 40, about 65 per cent. These and other figures cited show that the German custom of vaccination of infants, and revaccination at the age of 12, Gins believes, protects till near the age of 40 a large per cent of those treated; while after 40 only about a third remain immune to smallpox. At the same time, the testimony presented indicates that when there is no reaction or only a faint response to the revaccination at 12, the subject runs no danger of ever having smallpox. The only really safe method is to revaccinate every three years, and also whenever an epidemic threatens.

**VACCINE THERAPY.** Asthma is the latest disease to be treated by this method and promising results have been reported by Rogers in a number of cases. His method is as follows: Cultures were made from freshly obtained sputum; sub-cultures were made from the fine pneumococcal and streptococcal-like colonies, a number of them being taken up so as to get as many strains as possible in the tubes used for making the vaccine. Occasionally the culture consisted so purely of fine colonies that the vaccine could be prepared from the primary culture, but this was exceptional. A solution of 5 c.c. of sterile salt was added to each tube, which was then heated to from 58 to 60 C. for one hour; one-half per cent of phenol was added, and after mixing well, the fluid was put up in doses of one-half and one c.c. The first dose was one-half c.c. which usually contained about 50,000,000 organisms. If only a little local reaction occurred, without fever, a dose of one c.c. was given after five days, and repeated weekly. Occasionally the dose was increased to one and one-half or two c.c., but as a rule this was unnecessary.

**WEIL'S DISEASE.** Ido and his co-workers have employed a serum from recovered patients and another serum obtained from actively immunized horses in the treatment of 35 patients suffering from Weil's disease. Among these there were seven deaths. The usual mortality in this disease in Japan is said to be between 30 to 48 per cent. The serum apparently destroys the spirochetes contained in the blood and promotes the development of antibodies. See **JAUNDICE**, **HEMORRHAGIC**.

**VACHELL**, HORACE ANNESLEY. See **LITERATURE**, **ENGLISH AND AMERICAN**, *Fiction*.

**VACUUM PUMPS.** See **PHYSICS**.

**VALPARAISO UNIVERSITY.** A co-educational non-sectarian institution at Valparaiso, Ind., founded in 1873. In the autumn of 1916

there were 5444 students and 220 faculty members. During the year a department of agriculture was established, headed by a dean of agriculture. Otherwise the faculty remained unchanged. For the use of the department of agriculture the university received a \$50,000 tract of farm land. From another source \$84,000 was received. In 1916 the university had in productive funds \$134,000. In tuition fees it received \$196,489. There were 17,000 volumes in the library. President, Henry B. Brown.

**VALUATION, RAILWAY.** See **RAILWAYS**.

**VANDERBILT UNIVERSITY.** A co-educational non-sectarian institution at Nashville, Tenn., founded in 1872. The total enrollment in all departments in the fall of 1916 was approximately 950 and the faculty numbered 145. During the year there was added to the endowment \$1,000,000, of which \$700,000 came from the Vanderbilt family and the General Education Board. Altogether the productive funds of the university amounted to \$2,600,000 and the income was \$275,000. There were 62,000 volumes in the library. Chancellor, James Hampton Kirkland.

**VAN HORN**, ROBERT THOMPSON. An American journalist and legislator, died in Kansas City, Mo., Jan. 3, 1916. Born at East Mahoning, Pa., in 1824, he became a printer's apprentice at 15. After some years in Pennsylvania, Indiana, Ohio, and New York, he went to Kansas City, where he purchased an interest in the *Weekly Enterprise* (1855). He changed the name to the *Journal*, of which for 40 years he was the editor. During the Civil War he served in the Union army as lieutenant-colonel, participating in the battle and siege of Lexington, Mo., the battle of Shiloh, and others. Although before the war he had been a Democrat, he turned Republican and is credited with having saved Kansas City to the Union. Afterward he served as mayor of that city, for three years as member of the State Senate, and for four terms as Representative in Congress.

**VAN VLECK OBSERVATORY.** See **ASTRONOMY**.

**VASSAR COLLEGE.** A non-sectarian institution for the education of women, at Poughkeepsie, N. Y. It was founded in 1861. In all departments in the fall of 1916 there were 1094 students registered and the faculty numbered 130. During the year the task of raising a \$1,000,000 endowment fund was completed. The productive funds of the institution amounted to \$1,406,900. In the library there were 92,000 catalogued books and pamphlets. In 1916 occurred the death of Dr. James M. Taylor (q.v.), president emeritus of the college. President, Henry Noble MacCracken. See also **HORTICULTURE**; **UNIVERSITIES AND COLLEGES**.

**VEGETABLES.** See **HORTICULTURE**.

**VEILLER**, BAYARD. See **DRAMA**.

**VENEREAL DISEASES.** See **PROSTITUTION**.

**VENEZUELA.** UNITED STATES OF. A republic of northern South America, situated between Colombia and British Guiana and extending from the coast south to Brazil. The capital is Caracas.

**AREA, POPULATION, ETC.** The estimated area is 1,020,400 square kilometers (393,976 square miles). Estimated population June 30, 1915, 2,816,484. There is reason to believe that this estimate is excessive. The following estimates of urban populations were published in 1916:

Caracas, 86,798; Valencia, 64,861; Maracaibo, 48,490; Barquisimeto, 32,776; Ciudad Bolivar, 21,595; San Cristóbal, 20,759. Births in 1914, 75,817; deaths, 51,697; marriages, 7492; immigrants, 10,810; emigrants, 10,742.

Primary instruction is free and nominally compulsory, but illiteracy is prevalent. The number of primary schools, public and private, is about 1600, with an enrollment of about 50,000 pupils. There is a considerable number of establishments for secondary, higher, and special instruction. The state religion is Roman Catholicism.

**PRODUCTION AND COMMERCE.** The crops of Venezuela include coffee, cacao, sugar-cane, corn, beans, cotton, etc. The area under coffee is about 200,000 acres. Coffee and cacao form the largest exports; the cotton output is consumed almost wholly in the mills of Valencia, Caracas, and Cumaná. The forests yield rubber, balata, copaiba, chicle, tonka beans, dividivi, and vanilla. Cattle raising is of considerable importance. There are large mineral resources; the principal minerals exploited are gold, asphalt, copper, iron, and petroleum.

Imports and exports in 1915 were valued at 69,793,970 and 121,266,459 bolivars respectively, as compared with 72,473,913 and 111,505,354 in 1914. Imports and exports valued in thousands of dollars (converted from bolivars at 19.3 cents) have been as follows:

	1910	1911	1912	1913	1914	1915
Imports	12,238	18,895	20,569	18,080	13,987	13,470
Exports	17,949	22,684	25,261	20,484	21,521	23,404

Leading imports in 1914 and 1915, in thousands of bolivars: cotton goods, 13,638 and 13,280; flour, 4531 and 5730; machinery, 2626 and 2638; drugs and medicines, 2457 and 3226; rice, 2064 and 3222; stearin, 1342 and 1819; agricultural implements and machinery, 1137 and 1698; lard, 689 and 1499; automobiles and accessories, 823 and 1269; wines, 1527 and 1251; bagging, 1254 and 1185. The table below shows the principal exports, in bolivars:

	1913	1914	1915
Coffee	83,919,796	63,958,085	60,868,909
Cacao	25,154,061	20,301,832	25,077,148
Cattle hides	7,456,887	6,947,888	8,536,875
Gold	1,795,295	2,628,434	6,633,244
Balata	10,532,993	3,619,812	4,089,763
Asphalt	2,959,356	1,498,785	1,703,510
Chicle	189,912	504,159	1,611,942
Frozen beef	68,331	303,132	1,402,352
Goat and kid skins	1,738,522	2,134,090	1,317,862
Beef cattle	3,119,193	1,423,014	1,299,450
Copper ore	1,525,000	1,319,900	1,094,000
Raw sugar	486,131	1,401,128	888,496
Cigarettes	3,250,985	163,012	861,858
Rubber	1,158,695	656,370	728,411

Trade by countries is shown below, in thousands of dollars:

	Imports		Exports	
	1914	1915	1914	1915
United States	6,015	7,943	9,379	13,170
United Kingdom	2,893	2,907	1,427	2,041
Netherlands	1,456	788	908	3,199
France	778	655	6,019	2,978
Spain	482	652	1,091	1,080
Italy	548	485	288	524
Germany	1,590	.....	1,930	.....

Total, including others 13,987 13,470 21,521 23,404

**COMMUNICATIONS.** The roads of Venezuela, in general, are in poor condition, but recently the government has shown considerable activity in road construction and improvement. There is a large amount of traffic by water; navigable rivers total some 11,000 miles. The railways extend from coastal points to the interior, but are not connected to form a system. There are 12 lines of railway. The total railway mileage of Venezuela was 539 miles, including the five miles of the Macuto and Coast Line Railway, an electric tramway. The Central Railway of Venezuela operates between Caracas and Yare, the extension of about five miles, from Santa Teresa to Yare, having been opened to traffic. The Bolivar Railway worked with regularity during 1915, and the new branch line to San Felipe was later opened to traffic as far as Marin, close to San Felipe. In the Maracaibo district three railways were operating in 1916, viz.: The Gran Ferrocarril de Tachira, about 72 miles in length, which runs from Encontrados on the river Catatumbo to Tachira, and from that town there is a good road to San Cristobal; the Gran Ferrocarril de La Ceiba, which starts from La Ceiba and runs for some 58 miles into the interior of the State of Trujillo; and the Santa Barbara Railway, which starts from Santa Barbara on the river Escalante, and runs about 50 miles into the state of Merida. Telegraphs, 211 offices, with 8780 kilometers (5455 miles) of line. Post offices, 296.

**FINANCE.** The standard of value is gold. The monetary unit is the bolivar, equivalent to the franc, its par value being 19.295 cents. The budget for the fiscal year ending June 30, 1916, balanced at 39,594,500 bolivars; for the following fiscal year, 44,180,000 bolivars. Principal estimated receipts in 1916-17: customs, 10,700,000 bolivars; reserve funds of the treasury, 5,960,000; salt monopoly, 5,500,000; tax on cigarettes, 5,500,000; tax on liquors, 4,000,000. The larger estimated disbursements were: for the public debt and the department of finance, 14,930,175 bolivars; war and marine, 9,640,346; interior, 9,236,643; public works, 3,175,400; fomento, 3,036,490; public instruction, 2,599,563. Public debt as reported for March 15, 1915: foreign, 101,267,650 bolivars; internal, 60,154,287; total, 161,421,937.

**GOVERNMENT.** Venezuela is a federal republic, consisting of 20 states, two territories, and a federal district; the states are autonomous. The present constitution bears date of June 13, 1914. The national executive power is vested in a president, elected by the Congress for seven years and assisted by a cabinet of seven members, whom he appoints and who are responsible to him. The legislative power is exercised by a congress of two houses, the Senate and the Chamber of Deputies. Senators, 40 in number (two for each state), are elected by the state legislatures for three years. Deputies are chosen by direct vote for three years, each state having one deputy for each 35,000 inhabitants and an additional one for an excess of 15,000.

On April 19, 1914, the Congress elected as provisional president Gen. V. Márquez Bustillos, to succeed Gen. Juan Vicente Gómez, who had been president since 1909. General Gómez became commander in chief of the army, but on May 3, 1915, was elected by the Congress to suc-

ceed Márquez Bustillos. The latter, however, continued as provisional president, while Gómez retained his post of commander in chief.

**VENIZELOS, ELEUTHERIOS.** A Greek statesman, who in September, 1916, set up a provisional government at Canea, Crete, later transferred to Saloniki. M. Venizelos was born in 1864 at Murniaes, Crete, of humble parentage. His given name means "liberty." At 23, having returned from law studies in Athens, he was elected to the Cretan Assembly and became leader of the Liberal party. Thereafter he was a conspicuous figure in the affairs of the island, especially in 1890, when he led the revolt against outside attempts to stabilize the government. In 1909 he was invited to Athens to become leader of a new party founded by the Military League, an organization working for constitutional reform. Gifted with great power and persuasiveness as a speaker, Venizelos within a year had been chosen Prime Minister. His influence became so great that a number of factions united to oppose his policies. It was he who brought about the participation of Greece in the first and second Balkan Wars, and after the opening of the European war he led the movement to range the country on the side of the Entente Allies. For his part in the political events of 1915-16 see the article GREECE, section on *History*, and the article WAR OF THE NATIONS in this and the preceding YEAR BOOK. Consult G. Keroflios, *Eleutherios Venizelos, His Life and Work* (New York, 1916); Crawford Price, *Venizelos and the War* (London, 1916).

**VERDUN.** See WAR OF THE NATIONS.

**VERHAEREN, EMILE.** A Belgian poet, killed while boarding a train at Rouen, France, Nov. 27, 1916. He was born at Saint-Amand, near Antwerp, May 21, 1855. After attending a school at Ghent, he studied at the University of Louvain, and in 1881 was admitted to the bar at Brussels. His early radical journalistic enterprises, *La Semaine* and *Le Type*, were suppressed by the authorities, but presently he found surer footing with the reviews *La Jeune Belgique* and *L'Art Moderne*. To these he gave himself with enthusiasm, particularly as a champion of the impressionist painters who were then struggling for acceptance. Verhaeren at first allied himself with the French Parnassians, but he refused to be bound by the limitations of this school. With him in the "Young Belgium" group of writers who effected a literary renaissance were Maeterlinck and Georges Rodenbach.

Emile Verhaeren is essentially the national poet of Belgium, and especially of the Flemish Belgium that produced him. His verse is inspired largely by a passionate devotion, not to the nation as an entity, but to the land, the people, and the cities. The stark realism of his first work, *Les flamandes* (1883) brought most of the critics about his ears, but a few gave him encouragement. Three years later the young poet put out *Les moines*. This was followed by a trilogy that expressed the depths of morbidity and self-analyzed suffering reached by Verhaeren during a nervous breakdown. Written chiefly in England, it comprised *Les soirs* (1887), *Les débâcles* (1888), and *Les flambeaux noirs* (1890). Then came a gradual return to a vigorous interest in life and the world. Intense intellectualist that he was, he put behind him the struggle to solve the riddle of human des-

tiny. *Les apparus dans mes chemins* (1891), *Campagnes hallucinées* (1893), *Les villages ilusoires* (1894), and *Les villes tentaculaires* (1895) were the products of his convalescence. At this period he could regard cities only as "tentacled," like an octopus, ready to suck up the best life of the countryside and leave it desolate. Later, when he came to glory in the violent activity of commercial and industrial centres, he wrote *Les forces tumultueuses*, *La multiple splendeur*, and *Les rythmes*.

His affection for his homeland is perhaps best expressed in the series called *Toute la Flandre*, begun in 1904 with *Les tendresses premières* and continued with *La guirlande des dunes*, *Les héros*, *Les villes à pignons*, and *Les plaines*. Other volumes here to be noted include: *Les heures claires*, *Les visages de la vie*, *Les petites légendes*, *Les bords de la route*, and *Les blés mouvants*. Verhaeren wrote four dramas: *Les aubes* (1898), translated by Arthur Symons as *The Dawn*; *Le cloître* (1900), translated as *The Cloister*; *Philippe II* (1901); and *Hélène de Sparta* (1912). *Le cloître* was put on the stage in Brussels and Paris. Best known among his critical writings is his *Rembrandt* (1904). Since the beginning of the European war, betaking himself to France, Verhaeren had written *La Belgique sanglante* (translated as *Belgium's Agony*), had contributed to *The Book of Belgium's Gratitude*, and had prepared an appreciation of the English poet, Rupert Brooke. Much of his work, besides the books already noted, has been published in English. In 1915 Alma Strettel translated selected *Poems of Emile Verhaeren*, and in 1916 appeared *The Sunlit Hours* and *The Love Poems of Emile Verhaeren* (written to his wife before and after their marriage). His *Œuvres* were published in two series (1912 and 1914) by the *Mercur de France*. Consult numerous articles in the reviews during recent years and: H. B. Samuel, *Modernities* (New York, 1914); Stefan Zweig, *Emile Verhaeren* (London, 1914), with bibliography; Amy Lowell, *Six French Poets* (New York, 1915).

**VERMONT. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 364,322. The population in 1910 was 355,956.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16 were as follows:

		Acreage	Prod. Bu.	Value
Corn	.....1916	45,000	1,935,000	\$2,128,000
	.....1915	47,000	2,256,000	1,895,000
Wheat	.....1916	1,000	25,000	41,000
	.....1915	1,000	30,000	32,000
Oats	.....1916	80,000	2,560,000	1,664,000
	.....1915	81,000	3,483,000	1,846,000
Potatoes	.....1916	23,000	2,576,000	3,581,000
	.....1915	24,000	2,592,000	2,100,000
Hay	.....1916	980,000	a 1,666,000	20,992,000

	.....1915	12,000	420,000	315,000

a Tons. b Pounds.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned, in December, 1916, disclosed the fol-

lowing comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments....	1,958	1,772
Average number of wage earners	83,788	82,704
Capital invested .....	\$73,470,000	\$79,847,000
Wages .....	17,272,000	18,617,000
The value of materials used...	34,823,000	42,706,000
The value of products .....	68,310,000	76,991,000

**TRANSPORTATION.** The total railway mileage of the State is about 1080. There has been practically no construction of roads in the last three years.

**EDUCATION.** The total school population of the State in 1916 was 75,977. The total enrollment was 65,050. The average daily attendance was 53,000. The male and female teachers numbered 3000. The average yearly salary of teachers was \$450.

**FINANCE.** The total receipts for the fiscal year 1916 amounted to \$3,960,725. There was a balance at the beginning of the year of \$107,848. The disbursements amounted to \$3,824,579, leaving a balance on hand on July 1, 1916, of \$243,994.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the State Penitentiary at Windsor, the House of Correction at Rutland, Industrial School at Vergennes, State Asylum for the Insane at Waterbury, Soldiers' Home at Bennington, and the State Sanatorium at Pittsford. There were also 10 hospitals under the control of the State authorities. The State has no board of State charities.

**POLITICS AND GOVERNMENT.** The year 1916 was a momentous one for Vermont politically. The Legislature of 1915 passed a bill providing for the substitution of State-wide prohibition for the local-option, high-license law passed by the Legislature at its biennial session in 1902 and adopted by the people in the referendum of the following year. The new law was to take effect in 1917, if the voters in a referendum held in connection with the town meetings throughout the State in March, 1916, gave a majority vote in its favor. Otherwise, it was not to take effect until 1927, thus assuring the continuance of local option, even if a subsequent Legislature should fail to keep the implied faith and repeal the rejected bill. The Legislature at its session in 1915 also passed a bill providing for the adoption of the direct primary system in Vermont, to take effect in connection with the elections, State and national, in 1916, provided the voters at the annual town meetings in March gave the measure a majority vote. A spirited campaign was waged over the prohibition issue, but little attention was devoted to the direct nomination measure. A large vote was cast throughout the State in the respective town meetings in March. To the surprise of many voters local option had a majority of 13,489 over prohibition, the vote standing 32,142 for the existing law to 18,653 in favor of prohibition. Equally surprising was the adoption of the direct primary, the majority for the new system being 3537. Under the new primary law delegates to the national conventions are chosen by State conventions, instead of by State and district conventions as formerly. Candidates for United States Senators, Congressmen, State and county officers, and for both the State Senate and House of Representatives are nominated in an open primary, with the tickets

of all political parties printed on one ballot, there being separate ballots for United States Senator, State officers, and so on. Under the new primary law the candidates of a political party for State officers and for both branches of the Legislature hold a State convention at the call of the State chairman of that party's committee for the formulation of a State platform and the nomination of candidates for election as presidential electors.

The primary contest under the new law in September was one of the most spirited ever conducted in Vermont. The principal struggle was that over the Republican nomination for the United States Senate. The candidates were Senator Carroll S. Page, who desired to be his own successor, former Governor Allen M. Fletcher, and Governor Charles W. Gates. The only other contests of State-wide interest were those between Ex-Senator Roger W. Hulburd and Speaker John E. Weeks over the Republican nomination for Lieutenant-Governor, and between Secretary of Civil and Military Affairs Benjamin Gates and Thomas H. Cave over the Republican nomination for State auditor of accounts. Senator Page was renominated by a vote of over 23,000 to 8000 in round numbers for ex-Governor Fletcher and 6650 for Governor Gates. Hulburd was nominated for Lieutenant-Governor and Gates for Auditor.

At the presidential election in November the lead of Charles E. Hughes in the State was 17,542. The Republican candidate for the electoral college receiving the most votes had 40,250, the Democratic candidate 22,708, the Prohibition 709, and the Socialist 798, with 10 votes scattering.

The State election, formerly held in September, occurred under the amended State constitution in connection with the national election in November. Horace F. Graham, who was nominated in the September primaries without opposition, had a plurality of 25,738 over Dr. W. B. Mayo, the Democratic candidate, and the entire State Republican ticket had a similar margin. United States Senator Page defeated O. C. Miller, the Democratic candidate, by one of the largest majorities on record.

The election in Vermont in 1916 was significant for the entire disappearance of the Progressive party so far as a separate organization in the State is concerned.

By the purchase of an additional tract of 200 acres of land on the east side of Mount Mansfield, the Mansfield State Forest was increased in April to a total area of 5000 acres. It is now the largest State forest in Vermont, and excepting the Crawford Notch Forest in New Hampshire, the largest in New England.

In July the United States Supreme Court entered upon the consideration of a suit to determine the boundary line between Vermont and New Hampshire. This point has been in controversy since 1792. It became acute in the winter of 1916 when the New Hampshire boundary line commission reported to the Legislature fixing the boundary at high water mark on the west bank of the Connecticut River, which would give to New Hampshire much valuable property now paying taxes in Vermont. Vermont contends that the line should be at the western edge of the water, at its average and mean stage during the year.

**STATE OFFICERS.** Governor, Horace F. Gra-

ham; Lieutenant-Governor, Roger W. Hulburd; Secretary of State, Guy W. Bailey; Treasurer, Walter F. Scott; Auditor, Benjamin Gates; Adjutant-General, Lee S. Tillotson; Attorney-General, Herbert G. Barber; Commissioner of Education, Milo G. Hillegas; Commissioner of Agriculture, Elbert S. Brigham; Commissioners of Insurance, Guy W. Bailey and Walter F. Scott—all Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Loveland Munson; Associate Justices, John H. Watson, William H. Taylor, Seneca Haselton, George M. Powers; Clerk, L. C. Moody.

**STATE LEGISLATURE:**

	<i>Senate</i>	<i>* House</i>	<i>Joint Ballot</i>
Republicans .....	80	188	218
Democrats .....	..	40	40
Socialists .....	..	1	1
Republican majority..	80	147	177

\* House also has 17 additional members. Political affiliations not stated.

**VERMONT, UNIVERSITY OF.** A co-educational State institution at Burlington, Vt., founded in 1791. In 1865 the Vermont Agricultural College was incorporated with the university. In the fall of 1916 the total number of students was 659 and the faculty numbered 110. During the year Dr. James H. Worman was appointed professor of Spanish. The university had productive funds amounting to \$943,423 and drew an income from all sources of \$299,416. The library contained 94,353 bound volumes and 36,457 pamphlets. President, Guy Potter Benton.

**VERNER VON HEIDENSTAM, KARL GUSTAF.** A Swedish poet and novelist, awarded the Nobel prize in literature for 1916. He was born at Olshammar in 1859 and early studied painting at the Stockholm Academy and under Gérôme in Paris. Possessed of ample means, he traveled widely and his first published work (1888) was a collection of lyrical poems entitled *Vallfart och Vandringsdr* ('Pilgrimage and Years of Wandering'). This at once gained attention. In the same year appeared a volume of prose sketches, also on travel, entitled *Från Col di Tenda till Blocksberg. Hans Alienus* (1892), one of his most important works, is a romance describing a pilgrimage in search of beauty. The volumes entitled *Dikter* (1895) and *Nya Dikter* (1915) give him rank as the leading Swedish poet of his time. Although some of his verse is subjective and of mystical tendency, he is best known and liked for poems that voice a vigorous national spirit. Of his prose works, *Karolinerna* (1897-98), historical fiction relating to the time of Charles XII, was translated into English as *A King and His Campaigners*.

**VERSE.** See LITERATURE, ENGLISH AND AMERICAN; and articles on French, German, and other literatures.

**VETERINARY MEDICINE.** The fifty-second annual meeting of the American Veterinary Medical Association was held at Detroit, Mich., from August 21st to 25th, with an unusually large attendance. C. E. Cotton of Minneapolis was elected president and L. A. Merillat of Chicago, secretary. The association voted that all members on the honor roll, a roll established for long and faithful service, hereafter be known

as fellows of the association. A recommendation was adopted requiring a curriculum of 28 months involving four years, commencing with the session of 1916-17, at veterinary colleges on the accredited list of the association. After many years of effort the standing and scientific service of the veterinary medical profession was recognized by Congress in the National Defense Measure passed and approved by President Wilson, in which army veterinarians are given commissions with the rank of first and second lieutenant, captain, and major.

**FOOT-AND-MOUTH DISEASE.** The eradication of foot-and-mouth disease (see YEAR BOOK for 1915) was accomplished during the year after having appeared in 22 States and the District of Columbia. The last herd of cattle affected by the natural spread of the disease, in Christian County, Ill., was disposed of in February, 1916, and the only subsequent case was on a previously infected farm among some animals placed there to test the efficiency of the disinfection. Late in November Nebraska cattle received at the Kansas City stockyards were found to be suffering with sore mouths and a quarantine was established, but investigations demonstrated the infection to be a vesicular stomatitis. In the course of the year and a half of eradication work 77,240 cattle, 85,092 swine, 9767 sheep, 114 goats, and 9 deer were slaughtered. The expenditures by the Federal government amounted to \$4,600,000, while the total cost of eradication, including a similar sum by the States, was approximately \$9,000,000. This sum, large as it is, is trivial compared to the colossal damage which would have been inflicted if the disease had escaped control and become permanently established in the United States. To care for future outbreaks of this or other diseases which may seriously threaten the live stock industry, an appropriation of \$1,250,000 was made by Congress.

**TEXAS FEVER AND TICK ERADICATION.** The work of eradicating the cattle tick which transmits splenic or Texas fever proceeded more rapidly than ever before. During the fiscal year ended June 30, 1916, 31,158 square miles were released from quarantine, 9493 square miles were released on September 15th, and 15,117 square miles on December 11th. Up to the latter date 309,131 square miles in 13 States, including all of the infested area in California, Kentucky, Missouri, and Tennessee, or 43 per cent of the original tick-infested territory, had been released from quarantine.

**TUBERCULOSIS.** In his annual report for 1916 the Secretary of Agriculture called attention to the wide dissemination of tuberculosis of farm animals, which may be transmitted to man and is the source of annual losses in the United States estimated at \$25,000,000, and outlined plans for its eradication. Statistics indicated that over 10 per cent of the dairy cattle in the United States were affected with tuberculosis, and in the Federal meat inspection 2.5 per cent of the beef cattle and 9 per cent of the hogs inspected during the year were found to be so affected.

**HOG CHOLERA.** The work with this disease was continued by the Federal Bureau of Animal Industry, with an appropriation of \$360,000 for the fiscal year 1916-17. The field work consisted (1) of experiments to determine the practicability of eradicating hog cholera from se-

lected sections of the country, and (2) demonstration and educational work with the object of enlisting the aid of farmers. In 14 counties where field demonstrations were carried on there was an increase of 474,734 hogs in the number raised in 1915 over 1912 and a decrease of 121,628 in the number lost during the same period, or a total gain of 596,362 hogs, thus demonstrating what can be accomplished by the use of serum and sanitary measures. Results from the treatment of infected herds with antihog-cholera serum, either alone or in combination with hog cholera virus, lead to the conclusion that it should reduce the loss to 14 or 15 per cent, if applied promptly, instead of an average loss of 80 to 85 per cent without treatment. A new method of the Bureau for the economical production of a clear sterilized antihog-cholera serum consisted in the addition of a small amount of extract from ordinary white navy beans to the defibrinated hog cholera immune blood, resulting in a serum which could be heated to a point which would absolutely kill any germs of foot-and-mouth disease. Preliminary work for the commercial application of this method was begun by certain establishments. Experimental work showed it to be unwise to use hogs for serum production unless they had been inoculated simultaneously at least 60 days prior to hyperimmunization. It was determined that the diluted virus possessed no advantages over the undiluted virus. Studies of the persistence of hog cholera virus in simultaneously treated pigs indicated that it persisted in the blood for a period of approximately two weeks, and that where sufficient serum was given to prevent the development of symptoms of the disease following inoculation the virus disappeared from the blood before the 28th day. Treatment after the appearance of clinical symptoms of cholera with larger doses of the serum than usually employed had noticeable effect on the course of the disease. Investigations by Healy and Gott in Kentucky indicated that the virus of hog cholera on incubation with hyperimmune blood for 48 hours at 37° C. was so modified that when injected it would no longer render normal hogs sick but would protect them when later exposed to hog cholera.

**CONTAGIOUS ABORTION.** An appropriation of \$50,000 was made by Congress for the development of means for controlling contagious abortion, a disease which had reached such proportions as to threaten seriously the cattle-raising industry, its exceedingly rapid spread among range animals being an outstanding feature. The use of the agglutination test had been found by Schroeder to be a very reliable and inexpensive means of detecting infected animals. Since cows that have never aborted and regularly produce seemingly normal calves may be chronic carriers and disseminators of abortion bacilli, this test should be applied to every new animal purchased before it is permitted to come into contact with the uninfected herd.

**HEMORRHAGIC SEPTICEMIA OR SHIPPING FEVER OF CATTLE.** This disease of cattle recognized in the United States for the past 20 years was the source of heavy losses, numerous outbreaks having occurred during the fall of 1915 and the spring of 1916 in the Central and Northwestern States.

**GLANDERS.** During the course of an outbreak of glanders at Newport News, Va., in which

about 300 samples of blood serum were tested by the complement-fixation test, post-mortem examinations substantiated the results of the serum test in practically every case. The results obtained so far from work with mules were encouraging and indicated that the conglutination test was not only specific but of particular value in the testing of sera possessing anticomplementary or nonspecific fixing bodies.

**ANTHRAX.** Further experiments confirmed the efficacy of the combined serum and spore treatment of anthrax, as described by Eichhorn in a bulletin of the Federal Department of Agriculture. Reports upon the use during the year of approximately 7500 doses of anthrax serum and spore vaccine for the simultaneous method of immunization against the disease in the control of outbreaks in various parts of the country fully established the value of this method of immunization. A considerable quantity of the serum was supplied for the treatment of anthrax in man and animals and proved a valuable remedy.

**BLACKLEG OR SYMPTOMATIC ANTHRAX.** A blackleg serum prepared in Kansas was used on some 25,000 head of calves in Kansas with practically no loss. This serum, a sterile filtered product of animals highly immunized against blackleg by *Bacillus chauveauxi*, was found not only to protect animals against the disease but often to check it if given in its early stages. As the serum will protect animals for only 10 days to two weeks it must be followed in three days with a very strong dose of vaccine in order to insure a long period of immunity, and when thus produced the immunity lasts for more than 12 months.

**SWAMP FEVER.** This disease was increasing in economic importance, having gained a foothold in New York State, where it was first recognized in 1914.

**DOURINE.** This disease was found to be much more widely distributed among horses in some States than had been supposed. Good results were accomplished in eradication work in Montana, Wyoming, North and South Dakota, Nebraska, and Arizona. The complement-fixation test was made of blood serum from 45,100 animals, of which 1400 or 3.1 per cent gave positive reactions. The microscopic agglutination test for the diagnosis of dourine was devised during the year. This test supplements the complement-fixation test and is of particular value in certain cases since it greatly facilitates the rapid diagnosis of large numbers of samples.

**SCABIES ERADICATION.** As a result of work by the Federal Department of Agriculture sheep scabies was fast being eliminated from the sheep of the Western States. In California 43,243 square miles were released from quarantine during the fiscal year 1916. In the eradication work with cattle scabies 12,691 square miles in Texas were released from quarantine during the fiscal year.

**WHITE DIARRHEA OF CHICKS.** In the campaign against bacillary white diarrhea of chicks in Connecticut 14,617 fowls in 107 flocks were given the microscopic agglutination test and 9.85 per cent of the fowls found to be infected.

**RABIES.** Work was carried on under appropriations made by Congress for the suppression of rabies among wild animals in the infested area of southeastern Oregon, northeastern California, northern Nevada, and southwestern

Idaho. The loss of live stock from this source has been very heavy, a single rabid coyote having caused the loss of 27 steers in one feed lot.

**MISCELLANEOUS.** Feeding experiments at the Mississippi Experiment Station showed *Claviceps paspali* on Paspalum grass to be poisonous for cattle. Investigations by Yoshida in Formosa resulted in the discovery that two fresh water crabs are intermediate hosts of the lung distome (*Paragonimus westermanni*). Meyer, Traum, and Roadhouse in California have found *Bacillus enteritidis* to be responsible for certain forms of infectious diarrhea in calves. Experiments by Lamson in Connecticut have shown serious losses of chickens to be caused through feeding upon rose chafers, which contain a neurotoxin that has a direct effect upon the heart. Gutberlet has furnished evidence that the intermediate or cysticeroid stage of the tapeworm *Choanotania infundibuliformis* of chickens occurs in the common house fly.

**NECROLOGY.** Among the veterinarians who died during the year D. Arthur Hughes, Ph.D., D.V.M., whose death took place in Chicago, February 14th, at the age of 46 years, was perhaps the best known. Dr. Hughes was a professor at the Chicago Veterinary College and inspector of food supplies for the quartermaster corps of the United States army at Chicago. He was a voluminous writer, having frequently contributed to American and English veterinary journals.

**Bibliography.** Among the works published during the year were the following: E. T. Baker, *Sheep Diseases* (Chicago); R. E. Buchanan and C. Murray, *Veterinary Bacteriology* (2nd ed. rev., Philadelphia); W. Chenevard, *Maladies des Volailles* (Paris); R. Edelmann, trans. by J. R. Mohler and A. Eichhorn, *Textbook of Meat Hygiene* (3rd rev. ed., Philadelphia, 1916); H. B. Hemenway, *Essentials of Veterinary Law* (Chicago); E. W. Hoare, *Veterinary Therapeutics—A Guide to the Treatment of Disease in the Domestic Animals* (3rd ed. rev., Chicago); F. Hutyrá and J. Marek, *Special Pathology and Therapeutics of Domestic Animals* (2nd rev. and enl. ed., Chicago); J. V. Lacroix, *A New and Complete Work on Lameness of the Horse* (Chicago); L. A. Merillat, *The Principles of Veterinary Surgery* (2nd ed., rev. and enl., Chicago, 1915); G. Müller and A. Glass, *Diseases of the Dog and Their Treatment* (4th ed., rev. and enl., Chicago); R. Pearl, F. M. Surface, and Maynie R. Curtis, *Diseases of Poultry: Their Etiology, Diagnosis, Treatment, and Prevention* (New York, 1915); T. B. Rogers, *Veterinary Handbook and Visiting List* (Philadelphia and London); M. R. Steffen, *Special Cattle Therapy* (Chicago, 1915); H. Zinsser, J. G. Hopkins, and R. Ottenberg, *A Laboratory Course in Serum Study* (New York).

**VICKERS-MAXIM MACHINE GUN.** See MILITARY PROGRESS, *United States*.

**VICTORIA.** A state of the Commonwealth of Australia, lying south of New South Wales and east of South Australia. After Tasmania it is the smallest of the Australian states, the area being 87,894 square miles, which is about 3 per cent of the area of the Commonwealth. The population according to the census of 1911 was 1,315,551 (655,591 males, 659,960 females), exclusive of full-blooded aborigines. The increase per cent in the decade 1901-11 was 9.53, in 1891-1901 5.37, in 1881-91 32.30. At the end

of 1914 the number of inhabitants was estimated at 1,430,667, of which the town population was 893,700. The capital of Victoria is Melbourne, which is also the temporary capital of the Commonwealth; its population at the 1911 census was 103,598; including suburbs, 588,971; estimate of Dec. 31, 1914, 674,000.

The executive authority rests with a governor, who is appointed by the crown and is assisted by a responsible ministry of 12 members. The Parliament consists of two chambers, the Legislative Council (34 members) and the Legislative Assembly (65 members); members of the Council are elected for six years, and those of the Assembly for the duration of Parliament, which is limited to three years. The franchise was extended to women by an act of 1908. The governor in 1916 was Sir Arthur Lyulph Stanley, K.C.M.G., who was appointed in January, 1914; premier and treasurer, Sir Alexander James Peacock, K.C.M.G. See AUSTRALIA.

**VILLAS.** See ARCHITECTURE.

**VILLA-URBUTIA, MARQUÉS DE.** See SPANISH LITERATURE.

**VINCENT, FRANK.** An American explorer and author, died June 19, 1916, at Woodstock, N. Y. His home was in New York. He was born in Brooklyn, N. Y., in 1857, was educated at Yale, and spent most of his life in travel in various parts of the world. He became most famous for his explorations in India, and for his book called *The Land of the White Elephant* (1874), telling of his journey to Mandalay, which he reached a decade before the British occupation, and describing among other things the ruins of Cambodia in Farther India. The King of Siam and the heads of eight other governments decorated him for his discoveries, and Yale gave him an honorary degree of A.M. Among other lands that Mr. Vincent visited were Indo-China, Lapland, Brazil, and the Congo Free State. Alone he traveled across Lapland, and for 1000 miles into Brazil, where he discovered the double cataract of the River Iguassu, which he named Daly Falls, in honor of the president of the American Geographical Society. Besides the book already mentioned, Mr. Vincent published *Through and Through the Tropics; Norsk, Lapp, and Finn; Around and About South America; In and Out of Central America; The Lady of Cawnpore; and Actual Africa*.

**VINCENT, GEORGE EDGAR.** See ROCKEFELLER PHILANTHROPIC BOARDS, *Rockefeller Foundation*.

**VIRGINIA.** POPULATION. The estimated population of the State on Dec. 31, 1916, was 2,202,522. The population in 1910 was 2,061,612.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16 were as follows:

	Acreage	Prod. Bu.	Value
Corn . . . . . 1916	2,140,000	60,990,000	\$56,721,000
1915	2,125,000	60,562,000	42,999,000
Wheat . . . . . 1916	1,800,000	16,250,000	26,812,000
1915	1,230,000	16,974,000	18,382,000
Oats . . . . . 1916	250,000	5,750,000	3,622,000
1915	225,000	5,625,000	3,094,000
Potatoes . . . . . 1916	125,000	16,250,000	22,262,000
1915	140,000	17,500,000	10,675,000

	Acreage	Prod. Bu.	Value
Hay .....	1916 790,000	a 1,066,000	\$15,990,000
	1915 700,000	945,000	14,886,000
Tobacco ...	1916 190,000	b 129,200	18,863,000
	1915 192,500	144,375	13,571,000
Cotton .....	1916 44,000	c 29,000	2,682,000

See also AGRICULTURAL EDUCATION.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned, in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments..	5,685	5,508
Average number of wage earners .....	105,676	102,820
Capital invested .....	\$216,892,000	\$261,501,000
Wages .....	88,154,000	44,874,000
The value of materials used.	125,583,000	155,319,000
The value of products.....	219,794,000	264,089,000

**MINERAL PRODUCTION.** The estimated output of coal in the State in 1916 was 9,150,000 net tons, an increase compared with 1915 of 1,727,000 tons, or 21 per cent. The quantity of coal made into coke is estimated to have increased nearly 600,000, and shipments to have increased more than 1,000,000 tons. The demand for coal and coke from the Virginia fields was strong throughout the year. In the last six months the demand was considerably in excess of the supply. There was a scarcity of labor practically throughout the year, and the supply of cars was inadequate from June to the end of the year.

The production of iron in the State in 1915 was 348,042 gross tons, compared with 378,520 tons in 1914. The value of the ore shipped from the mines in 1915 was \$696,920 compared with a value in 1914 of \$719,415.

The production of coal in the State in 1915 was 8,122,596 short tons, valued at \$7,952,934. This was an increase over the production of 1914 of 163,061 tons. The number of men employed decreased from 9003 in 1914 to 8059 in 1915.

**TRANSPORTATION.** The total railway mileage of the State in 1916 was 4705. The roads having the longest mileage are the Norfolk and Western, 1176; Southern Railway Company, 884; the Chesapeake and Ohio Railway Company, 783; the Virginian Railway Company, 333.

**EDUCATION.** The total school population of the State in 1916 was 658,925. The total enrollment was 474,210. The average daily attendance was 317,140. Teachers male and female numbered 12,507. The average yearly salary of teachers was \$332.19. The most striking feature of the legislation affecting education in Virginia has been the adoption of laws designed to increase the efficiency of rural schools, particularly the one and two room schools, and laws prescribing educational qualifications for division superintendents. The laws adopted by the Legislature of 1916 also aimed to extend the usefulness of the agricultural high schools and offer much more liberal terms to school districts which wish to borrow from the State's Literary Fund, for the erection of school buildings.

**FINANCE.** The latest statistics available for finance are for the fiscal year ending October, 1914. There was on Oct. 1, 1913, a balance in the treasury of \$482,823. The receipts from all sources amounted to \$7,797,532, and the disbursements to \$7,645,357, leaving a balance on hand on Oct. 1, 1914, of \$835,417.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the Virginia Penitentiary at Richmond, State Farm at Lassister Post Office, Central State Hospital at Petersburg, Southwestern State Hospital at Marion, Western State Hospital at Staunton, the Virginia State Epileptic Colony and the Virginia Colony for the Feeble-Minded at Madison Heights, the Catawba Sanatorium, the Virginia School for the Deaf and Blind at Catawba, and the Virginia State School for the Colored Deaf and Blind at Newport News.

A number of other institutions are supported by the State, but are not under the control of the State Board of Charities. This board also has charge of the almshouses and jails in the cities and counties.

**POLITICS AND GOVERNMENT.** Virginia in the year 1916 had no political campaign of note, save that in one congressional district, the ninth, there was a rather warm contest between the Democrats and the Republicans, the latter retaining the Congressman. Except for the election of one United States Senator, who had no opposition, and the Congressmen, no other officers were chosen. All State officers are chosen in "off years," for a term of four years, following the presidential elections. In 1916 President Wilson increased his vote over that of four years ago by some 13,000 and his majority by approximately the same figure. The Republican presidential vote also showed an increase. The total vote for all presidential candidates was: Wilson, 102,824; Hughes, 49,356; Hanly, 1062; Benson, 683; Reimer, 67. Total, 154,012. United States Senator Claude Augustus Swanson, of Pittsylvania, ran ahead of the national ticket of the Democrats, many Republicans voting for him, his total vote being 133,056, approximately 30,000 ahead of the nominee for President. There were no issues, save that the Democrats endorsed and approved the administration of President Wilson in every respect, and the increased vote for him reflects that sentiment. He was given unanimous and hearty endorsement at the Roanoke convention of June 1st.

For Congress, all the old members, save one—Judge Thomas W. Harrison of Winchester succeeding Judge James Hay, now of the Court of Claims—were returned by the following vote: First district—Jones (D.), 9772; Butzner (R.), 2823. Second—Holland (D.), 10,123; Way (R.), 1939. Third—Montague (D.), 10,967; Maxey (Socialist), 751. Fourth—Watson (D.), 8119; Alfred (R.), 424. Fifth—Saunders (D.), 10,614; Davis (R.), 7601. Sixth—Glass (D.), 9119; Wilson (R.), 2920. Seventh—Harrison (D.), 10,052; Paul (R.), 6064. Eighth—Carlin (D.), 9168; Crupper (R.), 3450. Ninth—Slemp (R.), 17,848; Trinkle (D.), 16,460. Tenth—Flood (D.), 11,282; Nair (R.), 4583. There were several candidates for Congress on various divisions of the Socialist party, but the vote of none of them would have changed the result in the least in any case, some of them receiving so few votes as not to warrant consideration. However, they had candidates in

each district in the State. Hopewell, the newest city in the State, with a population of more than 25,000, cast just 28 votes for President of the United States, this being due to the fact that no person who had not lived for a year in the city limits could vote, while those who had not been in the State for two years could not vote, and the city was only developed in the last 18 months, with a population that is shifting at all times.

All of the candidates on the Democratic ticket were the result of primary elections, save that in the ninth a convention was held. On the other hand, all the Republicans were named by conventions. Under the laws of the State parties can make nominations by any plan that they may prefer, but in primaries the general election laws obtain. All candidates, whether successful or not, must file complete statements of all expenses, regardless of manner of nomination.

LEGISLATION. The Legislature met in 1916, and enacted many important measures. A record of these follow:

Court clerks were authorized to appoint as deputies women over 21. Provision was made for a public defender in cities of over 50,000, appointed for two years and removal to be made by the judge appointing him. Laws relating to procedure of criminal trials were amended. Trial judges were authorized to substitute road work for jail sentence in misdemeanor cases. The bureau of markets was established in the Department of Agriculture. Discrimination against persons wearing the United States or State militia or naval uniform was made a misdemeanor. The practice of optometry, and medicine and surgery were regulated. It was also made a misdemeanor for physicians to divide fees. The food laws were amended in important details. It was made a misdemeanor for any one using intoxicants to operate an engine, car, automobile, or train. It is declared that the father and mother are equally entitled to the custody, services, and earnings of legitimate children. The uniform land registration or Torrens system law was adopted, but does not apply to certain cities and counties until approved on referendum.

A prohibition law went into effect on March 1st. Although a large part of the State had previously voted dry in local option elections, the new law closed more than 800 saloons, chiefly in Richmond, Norfolk, Newport News, Lynchburg, Petersburg, Roanoke, and Bristol. The law is one of the most drastic ever passed by the State Legislature. No beverage showing a trace of alcohol, except cider, is allowed; and possession of more than one gallon of whiskey, one gallon of wine, and three gallons of beer are regarded as prima facie evidence of intent to violate the law. Together with the prohibition measure and to insure its enforcement the Legislature passed a bill which provided that ouster proceedings may be brought against State or municipal authorities who show a laxity in putting it or any other measure into effect. In addition a commissioner is provided to see that the law is enforced.

The House of Delegates in April defeated a bill already passed by the Senate providing for the establishment of a coordinate college for women at the University of Virginia. The vote was 46 to 48.

A new law went into effect during the year

under the provisions of which public officials may be removed for failure to enforce any statute.

STATE OFFICERS. Governor, Henry C. Stuart; Lieutenant-Governor, J. T. Ellyson; Secretary of Commonwealth, B. O. James; Auditor, C. Lee Moore; Treasurer, A. W. Harman; Superintendent of Instruction, R. C. Stearnes; Attorney-General, J. Garland Pollard; Adjutant-General, W. W. Sale; Commissioner of Agriculture, George W. Koiner; Commissioner of Insurance, Joseph Button—all Democrats.

JUDICIARY. Supreme Court of Appeals: President, George M. Harrison; Justices, S. G. Whittle, Joseph L. Kelly, Frederick W. Sims, Robert R. Prentis; Clerk, H. Stewart Jones.

STATE LEGISLATURE:

	Senate	House	Joint Ballot
Democrats .....	36	88	124
Republicans .....	4	12	16
Democratic majority..	32	76	108

VIRGINIA, UNIVERSITY OF. A State institution for the education of men at University, Va. It was founded in 1819. The total student enrollment in the fall of 1916 was 1087. The faculty numbered 79. In gifts, \$250,000 was received. The productive funds of the institution amounted to \$2,215,859, and the total income to \$374,256. In the library were 90,000 volumes. President, Edwin Anderson Alderman.

VIRGIN ISLANDS. A presidency of the Leeward Islands (q.v.).

VITALISM. See ZOOLOGY, *Vitalism*.

VITAL STATISTICS. INFANT MORTALITY. A statistical bulletin and chart, recently issued by the New York Milk Committee, gives the infant mortality rate in 144 cities in the United States. According to these figures only four of these cities were giving adequate attention to this important subject. These cities, with their infant death rates, are La Crosse, Wis. (30.6); Ogden, Utah (39.8); Omaha (47.1); and East Orange, N. J. (48.8). The highest infant death rate in the whole series is that of Passaic, N. J. (193.5), but in this "bad eminence" Passaic is closely rivaled by Montgomery, Ala. (185.1), Nashville, Tenn. (182.3), and Perth Amboy, N. J. (176.7). No city with a population of 200,000 or over has an infant death rate as large as those just mentioned, but not one of them has the permissible rate of 50, and few even approach this limit. The lowest rates among cities of this class are those of Seattle, Wash. (53.1), and Portland, Ore. (57.7). The highest are those of Jersey City, N. J. (132.9), and Indianapolis, Ind. (131.6). To quote: "Of cities with a population of 100,000 or more, a baby born in Omaha was found to have four times as good a chance to live to celebrate the first anniversary of its birth as a baby born in Nashville, Tenn., or Fall River, Mass. In the cities under 100,000 and over 50,000 population, a Salt Lake City baby has over three times the chance of surviving the first year of life that a Passaic, N. J., or Holyoke, Mass., baby has; while in cities between 25,000 and 50,000 population a La Crosse, Wis., baby has an advantage more than six to one over a Montgomery, Ala., or Perth Amboy, N. J., baby."

J. W. Nicon, in a paper read before the Royal

Statistical Society, London, discusses the effect of war on national vital statistics. He analyzed the statistics of births, deaths, and marriages in France and Prussia for the period of 1868-73 and showed that both countries experienced a rise in the death rate in 1870 and 1871—the increase in the number of “civil” deaths being greater than the number of “military” deaths. This was especially marked in the case of France, the number of “civil” deaths being 437,000 more in 1870-71 than in 1868-69, when the number of “military” deaths was at the most 150,000. The rise in the death rate was felt at all ages and shared equally by the two sexes. Not only the two belligerents but the three surrounding neutral states of Belgium, Holland, and Switzerland all showed a period of maximum mortality in 1871. England and Wales remained unaffected. After the war, rapid recoveries set in in all countries except Prussia, the death rate in France falling in 1872 to 22 per thousand, the lowest on record. A serious fall in fertility was experienced by France and Prussia in 1871, and the three neighboring neutrals similarly suffered a reduction in their birth rates. There was a sudden decrease in marriage rates in France and Prussia in 1870; but in the year 1872 in both countries the marriage rate reached the highest on record. During the present war, England, France, and Germany are experiencing a serious fall in the birth rate. The death rate has not been seriously affected in England, the slight rise in 1915 being due to some extent to the bad winter and to an epidemic of measles. On the marriage rate the effect has been the reverse of that in the Franco-Prussian War, a large rise having taken place in 1916. The theory advanced early in the war that it was having the effect of increasing the proportion of male births—an old superstition—was found to be groundless. The serious effect which the war has on the vital statistics of the nation is shown by the fact that the “natural increase” of population in 1913 was 377,000. In 1915 it fell to 252,000, exclusive of deaths of soldiers abroad.

A report of the registrar-general on vital statistics for England and Wales shows that the population was in the year 1914 estimated at 36,960,984; males numbered 17,877,052, and females 19,083,632. There were 294,401 marriages during the year. The birth rate was 23.8 per thousand, the lowest on record. The total number of deaths registered in the year was 516,742. This gives a rate of 14 per thousand population, 0.2 higher than in the preceding year, but 1.4 below the average for the 10 preceding years. Of the total number of deaths registered, 91,971 or 17.8 per cent were those of infants under one year of age. This corresponds to an infant mortality rate of 105 per thousand births, being the lowest on record, excepting an equal rate in 1910 and a lower one in 1912. The provisional infant mortality rate for 1915 shows an increase to 110 per thousand births—no doubt because of the disturbing influence of the war.

A community having an infant mortality rate of zero, for a period of 10 years, has just been discovered. This is Villiers-le-Duc, a little commune in the south of France. Between 1893 and 1903 no child under one year of age died. During the preceding 90 years the rate has been from 20 to 30 per hundred, except from

1854 to 1863, when it fell to 15 per hundred. This fall was attributed to a mayor who was interested in public health and particularly in children. Similarly, the zero rate for 1893 to 1903 is attributed to measures taken by another mayor, son of the former official, who was also interested in saving the lives of babies. The measures introduced included the care of the mother before childbirth, assistance being given when necessary, strict regulation of midwives and their procedures, and supervision of the mother and nursing. Other regulations provide for the sterilization of milk and the welfare of infants placed out to nurse. Dr. Moore, of Huddersfield, England, who writes of this community, does not give the population or other vital statistics relative thereto, so that it is impossible to estimate the value of his report.

**CONTAGIOUS DISEASES.** The following statistics as to contagious diseases throughout the world are compiled from the United States Public Health Reports. While in many instances incomplete and misleading, they are the best obtainable:

*Smallpox.* Algeria, 1 case; Argentina, 97 cases; Austria-Hungary, 1539 cases, 37 deaths; Brazil, 602 cases, 145 deaths; British East Africa, 8 cases, 6 deaths; Canada, 34 cases; Canary Islands, “epidemic”; Ceylon, 14 cases, 2 deaths; China, 408 cases, 238 deaths; Cuba, 2 cases; Egypt, 233 cases, 84 deaths; France, 10 cases; Germany, 10 cases; Great Britain, 71 cases, 6 deaths; Greece, 178 cases, 37 deaths—“present in virulent form”; Guadalupe, “present”; Hawaii, 1 case; India, 4263 cases, 1920 deaths; Indo-China, 498 cases, 47 deaths; Italy, 6 cases; Japan, 140 cases, 22 deaths; Java, 503 cases, 120 deaths; Malta, 7 cases, 1 death; Mexico, 978 cases, 1108 deaths; Netherlands, 54 cases, 6 deaths; Persia, 140 deaths; Philippine Islands, 5 cases; Portugal, 63 cases; Russia, 1533 cases, 543 deaths; Siam, 2 cases, 1 death; Spain, 313 cases, 389 deaths; Straits Settlements, 152 cases, 42 deaths; Switzerland, 151 cases; Turkey in Asia, 97 cases, 41 deaths; Union of South Africa, 102 cases; Uruguay, 1 case; Venezuela, 2 cases, 3 deaths—“present”; Zanzibar, 1 case.

*Plague.* Argentina, 49 cases, 11 deaths; Azores, “present”; Brazil, 27 cases, 13 deaths; British East Africa, 7 cases; Ceylon, 140 cases, 218 deaths; Chile, 17 cases; China, 29 cases, 30 deaths; Ecuador, 830 cases, 319 deaths; Egypt, 1693 cases, 825 deaths; Great Britain, 11 cases, 4 deaths; Greece, 24 cases, 16 deaths; India, 125,830 cases, 102,589 deaths; Indo-China, 652 cases, 416 deaths; Java, 1109 cases, 1061 deaths; Mauritius, 17 cases, 8 deaths; Persia, 20 cases, 14 deaths—“present”; Peru, 456 cases, 240 deaths; Russia, 16 cases, 13 deaths; Siam, 449 cases, 402 deaths; Straits Settlements, 18 cases, 13 deaths; Union of South Africa, 46 cases, 36 deaths; Orange Free State, 36 cases, 23 deaths.

*Cholera.* Austria-Hungary, 1752 cases, 894 deaths; Borneo, 2 cases; Ceylon, 1 case, 1 death; China, 10 cases, 26 deaths; Egypt, 117 cases, 44 deaths; Germany, 1 death; Greece, 15 cases, 38 deaths; India, 632 cases, 2215 deaths; Indo-China, 3591 cases, 2171 deaths; Japan, 1676 cases, 706 deaths; Java, 144 cases, 186 deaths; Korea, 4 cases, 1 death; Persia, 136 cases, 176 deaths; Philippine Islands, 7245 cases, 4579 deaths; Russia, 4 cases, 1 death; Siam, 39 cases, 39 deaths; Straits Settlements, 9 cases, 4

deaths; Turkey in Asia, 793 cases, 348 deaths; Turkey in Europe, 168 cases, 82 deaths; at sea, 26 cases, 23 deaths.

**Yellow Fever.** Barbados, 20 cases, 8 deaths; Ecuador, 242 cases, 137 deaths; Martinique, 1 case, 1 death; Mexico, 32 cases, 12 deaths.

**Typhus Fever.** Algeria, 2 cases, 2 deaths; Argentina, 2 deaths; Austria-Hungary, 4060 cases, 7 deaths; Belgium, 1 death; Canada, 4 cases; Canary Islands, 3 deaths; China, 18 cases, 4 deaths; Colombia, "epidemic"; Cuba, 2 cases, 1 death; Egypt, 1909 cases, 811 deaths; France, 1 case, 1 death; Germany, 128 cases, 68 deaths; Great Britain, 49 cases, 18 deaths; Greece, 491 deaths; Italy, 55 cases, 15 deaths; Japan, 443 cases; Java, 274 cases, 69 deaths; Mexico, 6581 cases, 702 deaths; Netherlands, 1 death; Norway, 1 death; Russia, 2846 cases, 280 deaths; Spain, 4 deaths; Sweden, 16 cases; Turkey in Asia, 1286 cases, 269 deaths.

**VITAMINS.** Due to a certain dietary deficiency, there develops a nervous disease known as polyneuritis, which is speedily relieved by adding to the food ingested by the patient certain accessory food substances.

A variety of polyneuritis, called beriberi, is caused by a diet of rice from which has been removed the brownish envelope by over milling. This disease is cured by feeding unmilled rice, or foods that contain the accessory food substance which is found in the rice husk, in peas, beans, barley, or yellow corn meal. Fraser and Stanton, in 1912, dissolved the protective substance out of rice polishings with hydrochloric acid solution. Chamberlain and Vedder, in 1911, showed that the substance was water soluble, alcohol soluble, not ether soluble, dialyzable, and absorbed by animal charcoal. Casimir Funk obtained in the same year a crystalline base from rice polishings to which he gave the name "vitamin," believing he had isolated the substance in chemical purity. Although Funk presented an empiric formula for it, it is thought now that he had not isolated the pure substance, and it is claimed by chemists that the substance is not really an amin. The experiments and researches of others show that there are several accessory food substances which are very important in metabolism, and must be noted in preparing diets in institutions, and in combating such diseases as polyneuritis, pellagra, etc., while their exact rôle has not been determined. Each deficiency disease is probably caused by the absence of its particular vitamin. It has been shown by experiments with rats, by Funk and McCallum, that diets which produce neither scurvy nor beriberi may still be deficient in accessory food substances, and the rats fail to grow. The failure is due to the absence of two substances: one water soluble, one soluble in butter fat, both of which must be present in the food or there is no growth. More facts are necessary to determine the relations of these substances to each other, assuming that there is a group of vitamins. But it is a settled fact that they are essential to health and growth. See PELLAĞRA.

**VIVATOR.** See RESUSCITATION.

**VODKA.** See LIQUORS.

**VOGRICH, MAX.** An Austrian composer and pianist, died in New York, June 10, 1916. For some years he had been resident in the United States. Born in Szeben, Transylvania, in 1852, as a boy he gave great promise, so that he was

sent to study under Reinecke, Richter, Moscheles, and other great teachers. Between 1870 and 1878 he toured widely in concert, on the Continent, in the United States, and in South America. From 1882 to 1886 he lived in Australia, teaching and playing, and then he came to New York. His oratorio, *The Captivity*, was given by the Metropolitan Society in New York in 1891, and besides this he composed several operas, cantatas, masses, symphonies, and other music.

**VOGÜÉ, CHARLES JEAN MELCHIOR, MARQUIS DE.** A French historian and archaeologist, died in Paris Nov. 10, 1916. He was born in Paris in 1829. After an education at the Collège Henri IV, Paris, he became an attaché of the embassy at St. Petersburg. As a young man he was enabled to travel widely in Palestine and other Oriental countries, and the fruits of his explorations and studies were soon put into published form. In 1871 he was appointed Ambassador to Turkey and in 1875 was transferred to Austria, but left the diplomatic service five years later. In 1901 he was chosen a member of the French Academy, and he was also made a commander of the Legion of Honor. In the War of 1870 he served as vice-president of the French Red Cross and during the European war had been its head. He was also president of the Agricultural Society and of the Jockey Club. His earliest important archaeological work was *Les églises de la Terre Sainte*, in which he discussed the influence of East on West and vice versa at the time of the crusades. *Le Temple de Jérusalem, l'architecture civile et religieuse du Ier au VIème siècle dans la Syrie centrale* brought him admission to the Académie des Inscriptions et Belles-Lettres in 1868. *Jérusalem* and *Mélanges d'archéologie orientale* were other publications in this field, and often the illustrative drawings were by his own hand. The Marquis de Vogüé's historical works included: *Villars d'après sa correspondance* (2 vols.); *Lettres inédites du duc de Bourgogne et du duc de Beauvilliers, Malplaquet et Denain, Catalogue de la collection de Clerg; et Une famille vivaroise* (annals of his own distinguished family).

**VOLAVY, MARGARET.** See MUSIC, Artists, Instrumentalists.

**VOLCANOES.** Lassen Peak, Sierra Nevada Mountains, California, displayed evidences of activity at irregular intervals in 1916 as a continuation of the phase of spasmodic eruption which began in May, 1914. The stage of quiescence has not yet been reached, apparently, and there is still a possibility that a violent outburst may occur such as has seemed imminent at different times. The ejected materials have consisted of dust and broken and comminuted lava from earlier eruptions, with large quantities of steam, but no molten lava has been given out so far as known. The mud flows that were so prominent a feature in the first period and a cause of much damage to forest and agricultural lands in the vicinity have not been so much in evidence during the year.

**ELECTRIC POWER FROM VOLCANOES.** A notable power plant was put into operation in Italy during the year 1916 where the subterranean steam from a volcano in Central Tuscany near Volterra is used to generate power. Since 1903 Prince Ginori-Conti had experimented in this region and holes from 12 to 20 inches in diameter were bored in the ground and

pipes driven down to the source of the steam, usually about 300 to 500 feet below the surface. The borax salts and gases mixed with the steam made it impossible to use the steam directly in an ordinary engine, but by using it as a source of heat for an ordinary multi-tubular boiler in which steam was produced at a pressure of two atmospheres and then drying it by volcanic steam heat in a superheater it was found possible to use it to drive a 300-horse power condensing steam turbine direct connected to a three-phase generator. The plant installed during the year consists of three 3000 kilowatt turbo-generators designed to operate with superheated steam at one and one-half atmospheres. These deliver three phase electric current at 4500 volts, 50 cycles, which is stepped up to 36,000 volts for transmission to Florence, Leghorn, Volterra, Gusseto, and other towns in Tuscany. As coal was selling for from \$40 to \$50 a ton in Italy during 1916 this development of 15,000 horse power from natural heat was most advantageous. See *Engineering* (London, Nov. 17, 1916).

**VOLUNTEERS OF AMERICA, THE.** A Christian and social organization modeled on the United States army, and incorporated in 1896 under the laws of the State of New York. Although ruled by military discipline and methods, it is democratic in its constitution, which was framed by a Grand Field Council which consists of representatives of minor and local councils of officers elected annually. In 1916 the Volunteers had 56 homes and benevolent institutions in the leading cities and towns of the United States. In 1916 the Volunteer workers visited and aided 29,510 families, and gave 244,898 free lodgings in their charitable institutions. Lodgings were paid for by work found for 307,169 persons, free meals were given to 820,072 persons, and 410,103 meals were given to persons who paid for them either by money or by work. The Volunteer Prisoners' League had enrolled in 1916 upward of 81,000 members, had organized leagues in 30 State prisons, and by means of its Hope Halls had enabled more than 70 per cent of the discharged prisoners to lead better lives. During 1916 852,350 persons attended indoor meetings, and 2,118,196 persons attended open-air meetings. At these services 7601 persons were converted. At the Volunteer Hospital in New York City in 1916 there were 2023 ambulance calls, 9673 days' treatment given to patients in the surgical and medical wards, 7573 new cases treated, and 12,837 old cases treated. Large quantities of Christian literature were sent to the State prisons, jails, hospitals, soldiers' homes, and children's homes. In connection with the Volunteers there are also sewing classes, hospital nursing, temporary financial relief departments, fresh air camps, and many other worthy undertakings. The headquarters are at 34 West 28th St., New York City.

**VOORHEES, THEODORE.** An American railroad president, died March 12, 1916, at Elkins Park, Pa. He was born in New York City in 1847, studied at Columbia, and graduated from Rensselaer Polytechnic Institute as a civil engineer in 1869. Thereafter till his death he was connected with one railroad or another. He held administrative positions on several roads in New York State, and by 1890 had become general superintendent of the New York Central, of which, for five years, he had been assistant general superintendent. In 1893 he became vice-president of the Philadelphia and Reading Railroad, and in 1914 its president.

**VOTING, ABSENTEE.** See ELECTORAL REFORM.

**VOTING, PREFERENTIAL.** See ELECTORAL REFORM.

**VREELAND, CHARLES E.** An American naval officer, died at Atlantic City, N. J., Sept. 27, 1916. He was born in New Jersey in 1852. After three months as a naval apprentice he was appointed to Annapolis in 1866. By 1871 he had become ensign and by 1906 rear admiral. In the war with Spain, he was a lieutenant on the *Dolphin*, having previously been a naval attaché at Vienna and Rome, and in 1907 he commanded the *Kansas* in the trip of the battleship fleet around the world. In 1909, while serving as commander of the second division of the Atlantic Fleet, with the *Delaware* as his flagship, he represented the navy at the coronation of King George V. Two years later he was chairman of the board (later called the Vreeland Board) which examined the wreck of the *Maine* and reported that it had been destroyed by an outside explosion. Rear Admiral Vreeland was an ardent supporter of an enlarged navy. He was retired for age in 1914 and had since lived in Washington.

**WAGES.** See MINIMUM WAGE.

**WAGNER, SIEGFRIED.** See GERMAN LITERATURE, *Drama*.

**WAIT, WILLIAM BELL.** An American educator of the blind and inventor, died in New York City, Oct. 25, 1916. He was born at Amsterdam, N. Y., in 1839, and was educated in the public schools of Albany and at the Albany Normal College, where he graduated in 1859. For two years he was a teacher in the New York Institute for the Education of the Blind, then studied law, and in 1862 was admitted to the bar. Instead of practicing, however, he accepted the principalship of the schools of Kingston, N. Y. From 1863 he was identified with the Institute for the Blind, as principal until 1905, and then as principal emeritus until his death. He devised the New York point alphabet for the blind and a system of musical notation; the kleidograph, a machine for embossing his point system on paper; a typewriter for the blind; and the stereograph, a machine for embossing metal plates. These inventions brought to Mr. Wait the John Scott medal of the Franklin Institute of Philadelphia in 1900. He published two books on his point systems; *The Normal Course of Piano Technic*; *Harmonic Notation*; *Phases of Punctography*; and *The Uniform Type*

**Question.** He helped to found the American Association of Instructors of the Blind.

**WALES.** See GREAT BRITAIN.

**WALKER, ASA.** An American naval officer, died at Annapolis, Md., March 7, 1916. He was born in 1845 at Portsmouth, N. H. Graduating from the United States Naval Academy at 21, he served on various stations and rose through the grades, reaching that of commander in 1894. During four periods between 1873 and 1897, he was on duty at Annapolis. In the latter year he took command of the U. S. S. *Concord*, and with it participated in the battle of Manila Bay, being advanced nine numbers for his services. Afterward he served successively at the Naval War College, on the Naval Examining Board, as commander of the *San Francisco*, member of the General Board, commander of the *Wabash*, and superintendent of the Naval Observatory at Washington. In 1907 he retired, having reached the rank of rear admiral the preceding year.

**WALKER, STUART.** See DRAMA.

**WALLACE, ALFRED RUSSEL.** See LITERATURE, ENGLISH AND AMERICAN, *History, etc.*, English.

**WALLACE, SIR WILLIAM.** A British colonial administrator and explorer, died at Axminster, Devonshire, England, July 11, 1916. He was born in 1856 in Arbroath. For 32 years, while administrator of the Niger Company's territories, his duties were concerned with the acquisition and consolidation of British interests in that region, and he did much, by treaties with the native chiefs and many military expeditions, to accomplish this end. As a result, the way was paved for the subjugation of the Fulani nation and the acquisition of Nigeria for the British Empire, after which event he became resident general in 1900, and from that year to 1910 served as deputy high commissioner and acting Governor of Northern Nigeria. Besides three West African medals, with five clasps, he received the C.M.G., being promoted K.C.M.G. in 1907, and for his explorations in Nigeria was awarded the Murchison grant by the Royal Geographical Society, which body elected him a fellow.

**WARD, MRS. HUMPHRY.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*, English.

**WARD, WILFRID PHILIP.** A British Roman Catholic leader, author, and editor, died April 9, 1916, at Hampstead, London. The son of William George Ward, famous in connection with the Oxford Movement as "Ideal" Ward, Wilfrid Ward was born at Old Hall, Ware, in 1856, and was educated at St. Edmund's College, Ware, Ushaw College, Durham, and the Gregorian University, Rome. At Ushaw College, Mr. Ward became a lecturer in philosophy in 1890, and later was examiner to the Royal University of Ireland. From 1886 he was a member of the Council of the Catholic Union of Great Britain, in 1901 was appointed to the Royal Commission on Irish University Educa-

tion, and in 1915 lectured in Boston before Lowell Institute. Outside his own country he became best known as editor of the *Dublin Review*, for many contributions to such reviews as the *Quarterly*, *Edinburgh*, and *Contemporary*, and for his writings in book form, including: *William George Ward and the Oxford Movement* (1889); *William George Ward and the Catholic Revival* (1893); *The Life and Times of Cardinal Wiseman* (1897); *Ten Personal Studies* (1908); *John Henry, Cardinal Newman* (1912); *Mex and Matters* (1914).

**WARD, WILLIAM HAYES.** An American clergyman, editor, and Oriental scholar, died at South Berwick, Maine, Aug. 28, 1916. He was born at Abington, Mass., in 1835, the son of a minister. As a small boy he learned to read Hebrew, Latin, and Greek, and studied other subjects at home, then, after a final preparatory year at Phillips Andover, entered Amherst College. He graduated in 1856 and three years later finished his theological training at Andover Seminary. For a time he was a teacher and a Congregational minister in Kansas, but from 1858 he was known most widely for his connection with *The Independent*. By 1870 he had become superintending editor of this periodical, then chiefly a religious journal, from 1896 to 1913 he was editor in chief, and thereafter was honorary editor. During his period of active service he was ranked as one of the best editorial writers of the time. Dr. Ward's other chief interest was Oriental art. He lectured on Assyriology at Yale as early as 1878-79, and in 1884 he was chosen to lead the Wolfe archaeological expedition to Babylonia. From then on he was a leading scholar in his field, particularly in the department of seal cylinders. Of these he made a collection which was bought by J. Pierpont Morgan, and he wrote an important work on *The Seal Cylinders of Western Asia* (1909). But Dr. Ward combined with his interest in a past civilization a passion for all the liberalizing movements of his own time. He identified himself with the anti-slavery cause and with the early efforts toward woman's rights, and he labored constantly against sectarianism in religion. It was he who initiated the project which resulted in the organization of the Federal Council of Churches of Christ in America. Honorary degrees were conferred on him by New York University and Amherst, of which he was long a trustee, and from 1890 to 1894 and again in 1909-10 he held the presidency of the American Oriental Society. Indicative of the field in which Dr. Ward found his chief literary pleasure, poetry, is his *Biography of Sidney Lanier* (1885). The younger American writers of verse found in him a discriminating critic and champion. His last book, *What I Believe and Why*, was published in 1915. Consult memorial issue of *The Independent* (Sept. 11, 1916).

#### VI. AERIAL WARFARE.

##### I. THE WAR IN BRIEF

On June 28, 1914, the Austrian heir-apparent, Archduke Francis Ferdinand, was assassinated with his wife at Sarajevo. Accusing Serbia of complicity in the crime, and alleging that the anti-Austrian machinations of Serbian patriots menaced the integrity of the Habsburg empire, Austria-Hungary on July 23, 1914, delivered an ultimatum containing demands with which the Serbian government would only partially comply. Despite the diplomatic remonstrances of other Powers, Austria-Hungary refused to submit the matter to peaceful arbitration and declared war on Serbia, July 28, 1914. The Russian government, frankly sympathetic with Serbia, ordered the mobilization of the Russian army and declined to countermand the order, whereupon the German government declared what it considered to be defensive war against

Y. B. 16—26.

Russia, Aug. 1, 1914. Two days later, Germany declared war against Russia's ally, France. Preparatory to the invasion of France, German troops had already occupied the neutral duchy of Luxemburg, August 2, and begun to invade Belgium, August 4, notwithstanding Belgian opposition. The British government construed the German violation of Belgian neutrality as a *casus belli* and declared war against Germany, August 4. Serbia and the "Allies," or Entente Powers—Russia, France, and Great Britain—were subsequently joined by Montenegro (Aug. 7, 1914), Japan (Aug. 23, 1914), Italy (May 23, 1915), Portugal (March 9, 1916), and Rumania (Aug. 27, 1916). The "Teutonic" or Central Powers—Austria-Hungary and Germany—on the other hand, while they failed to receive the support of their former confederate, Italy, succeeded in enlisting the aid of Turkey ("state of war" with Russia, October 30th; attacked by Great Britain and France, Nov. 5, 1914) and Bulgaria (Oct. 14, 1915).

From the outset the British and Allied navies commanded the seas, putting an end to German over-seas commerce and compelling the German battleships for the most part to remain in home waters under the protection of coast defenses and mines, although the main German battle fleet once ventured out to fight an indecisive battle off Jutland, May 31, 1916, and swift German battle-cruisers repeatedly raided the British coast. The naval engagements in the Bight of Heligoland (Aug. 24, 1914), off Coronel (Nov. 1, 1914), off the Falkland Islands (Dec. 8, 1914), and near Dogger Bank (Jan. 24, 1915) were of secondary importance. A few daring German commerce raiders and the surprisingly effective German submarines were able to inflict considerable damage upon the Allied and neutral merchant marines, but not to break the virtual blockade by means of which Great Britain hoped to starve out her principal enemy.

The military operations may be briefly summarized as follows: (1) In the Franco-Belgian theatre, the gallant Belgian defense of Liège (Aug. 4-5, 1914), the stand at Mons-Namur-Charleroi (Aug. 21-24, 1914), and a French counter-invasion of Alsace-Lorraine (August, 1914), failed to stop the onward sweep of the German armies through Belgium, Luxemburg, and Lorraine toward Paris. The high tide of the German invasion was reached in the battle of the Marne (Sept. 6-10, 1914), after which the German right wing fell back upon the Aisne River and extended itself northward through Picardy, Artois, and Flanders to the Belgian coast. From October, 1914, to December, 1916, the long intrenched battle line from Flanders to Upper Alsace remained almost stationary, although terrific attempts to break through were made by the Germans in Flanders (October-November, 1914), again at Ypres (April-May, 1915), in the Argonne (July, 1915), and at Verdun (February-July, 1916); as well as by the Allies at Neuve Chapelle (March 10, 1915), in the region just north of Arras (May-June, 1915), in Champagne (September-October, 1915), in Artois near Lens (September-October, 1915), and in the valley of the Somme River (July-December, 1916). (2) In the East, the initial Russian offensive in East Prussia was shattered by Hindenburg at Tannenberg (Aug. 26-31, 1914); an Austro-German coun-

ter-invasion of Russian Poland was checked before Warsaw (February, 1915); Russian armies invading Austrian Galicia attained the passes of the Carpathians early in 1915 but were almost completely expelled from Austrian territory by "Mackensen's Drive" (May-June, 1915); and an Austro-German invasion of Russia under the masterly direction of Field Marshal von Hindenburg, after conquering Warsaw (August 4th), Brest-Litovsk (August 25th), and Vilna (Sept. 18, 1915), was halted only by the swamps before Riga, the lakes around Dvinsk, and the marshes of the Pripet. The Russians returning to the attack in 1916 (June-August) recaptured the Volhynian fortresses of Lutsk and Dubno, conquered the Bukovina, and penetrated up the Dniester River in Galicia as far as Halicz. (3) After two important Austro-Hungarian attempts to "punish Serbia" had failed (in August and in December, 1914), a new Austro-German invasion of Serbia was undertaken in October, 1915, with the aid of Bulgaria, and by Dec. 5, 1915, Serbia was completely conquered. Anglo-French forces endeavoring to succor Serbia were defeated in the battle of the Vardar (December, 1915), and driven back upon their base, Saloniki, in Greek territory; Montenegro and northern Albania were overrun by Austrian and Bulgar armies (January-February, 1916); in the summer of 1916, however, the composite Allied army of Saloniki assumed the offensive and wrested the Serbian town of Monastir (November 19th) from the Bulgars.

(4) Rumania, entering the war on Aug. 27, 1916, too rashly sent her armies to "emancipate" Transylvania, leaving the Dobrudja undefended against Mackensen; the Rumanian invaders of Transylvania were thrown back in confusion by Falkenhayn; and all western Rumania, including Bucharest (December 6th), was conquered by German, Austro-Hungarian, Bulgar, and Turkish forces. (5) Turkish armies held the Dardanelles against Anglo-French assaults (February, 1915, to Jan. 8, 1916); delivered futile attacks upon the Suez Canal; captured a British army under General Townshend in Mesopotamia (April 28, 1916); and expelled the Russians from Kermanshah (July 5, 1916) and Hamadan (Aug. 10, 1916) in Persia; but were unable to defend the important Armenian cities of Erzerum (Feb. 16, 1916), Trebizond (April 18th), and Erzingan (July 25th) against the Grand Duke Nicholas's advance. (6) The Italians, having painfully penetrated a few miles into the Trentino, were rudely repulsed in May, 1916; towards Trieste the Italians made slow progress and finally captured Gorizia, Aug. 9, 1916. (7) All of the German colonies were taken: Kiaochow (in China) by the Japanese (Nov. 6, 1914); the German island possessions in the Pacific by British and Japanese expeditions; Togoland (August, 1914), Kamerun (February, 1916), German Southwest Africa (July, 1915), and German East Africa (incomplete conquest, 1916) by British, Boer, French, and Belgian forces.

Detailed accounts of the events here summarized will be found in the YEAR BOOKS for 1914 and 1915 under WAR OF THE NATIONS, as well as in the present article. See also the cross references given at the end of this article.

## II. THE SITUATION ON JANUARY 1, 1916

To the close of the year 1915, the most impressive events of the War of the Nations had been spectacular but incomplete demonstrations of German military superiority. In 1914, Belgium and a considerable section of Northern France (one twenty-fifth of the total area of France) had been overrun by German armies; but the French army, prudently commanded by General Joffre, had remained unshattered, and despite reckless sacrifices of men the Germans had failed to reach Calais and the Channel coast. In the summer of 1915, the Russian "steam roller" had been trundled back from Galicia and from Russian Poland to the Riga-Dvinsk-Pripet Marshes-Tarnopol line in a badly battered condition; but Field Marshal von Hindenburg had striven in vain to complete his victory by winning Riga and Dvinsk, and the Russian army, though terribly defeated, was not annihilated. In the closing months of 1915, Bulgaria had been won over to the Turco-Teutonic coalition, and had helped Field Marshal von Mackensen to conquer Serbia, thus giving the Central Powers military and commercial control of the vastly important railway route from Germany and Austria-Hungary through Nish and Sofia to Constantinople and even—thanks to the dismal failure of the Anglo-French Dardanelles campaign—through Asia Minor to Mesopotamia; but an Anglo-French expeditionary force was allowed to intrench itself at Saloniki where it constituted a standing menace to the Bulgarian occupation of Serbia. These three gigantic offensives had won glorious laurels for the German generals and new territories for the Central Powers, but still the Russian army was able to stand at bay, and the "contemptible" little British expeditionary force in the West had been swelled by repeated reinforcements until it was a million strong. General Joffre was planning an ambitious Anglo-French forward movement for the spring of 1916. The German military machine had brilliantly proved its ability to carry out smashing, irresistible offensives; it had demonstrated its amazing mastery of the new science of trench warfare, which enabled numerically inferior German forces to hold General Joffre's "forward movements" in check; but it had not won the war. Hence it was not surprising that whereas statesmen and journalists in Germany expressed a puzzled inability to understand the stubborn refusal of the defeated Entente Allies to sue for peace, French and British publicists, on the other hand, gave voice to the immutable conviction that the "just cause" and preponderant resources of the Entente Allies must ultimately triumph. The war, insisted the Allies, would be decided not by battles, or by campaigns, but by man-power, munitions, and economic resources. Thus Mr. Winston Spencer Churchill, a prominent English Liberal, with a sublime contempt for ephemeral German victories, proclaimed his belief that: "It is not necessary for us to win the war to push the German line back over all the territory they have absorbed, nor to pierce it. While the German lines extend far beyond their frontiers, while their flag flies over conquered capitals and subjected provinces, while all the appearances of military success greet their arms, Germany may be defeated more fatally in the second or third year of the war than if the Allied armies had

entered Berlin in the first year." The factors on which Mr. Churchill, in common with other Entente and pro-Entente observers, counted to ensure the Allies' final victory may be summarized under five heads: (1) Military manhood. The Turco-Teutonic coalition, if we may place confidence in the calculations of Mr. Hilaire Belloc, one of the foremost English historians of the war, was vainly striving by spectacular strategy to conceal the alarming wastage of its military manhood, while the Entente Powers were just beginning to draw upon their human resources. In like vein, Mr. Churchill predicted that, although at the beginning of the war the Germans had been superior in numbers, at the end of the second year the Germans would be outnumbered. Counting upon the Allies' resources in men, the French military critics praised General Joffre's costly "war of attrition," which by persistent pin-pricks would bleed the German army to death. In England, Lord Derby's recruiting campaign, backed up by a Compulsory Service bill, represented the first serious effort to utilize Britain's man-power (see GREAT BRITAIN, *History*). In Russia, there were certainly millions of able-bodied men, provided they could be adequately armed, trained, and officered, to replace the millions Grand Duke Nicholas had lost. Italy was by no means hard-pressed. France, alone of the Allies, had already put forth her maximum effort, and now, with grim courage, was sending mere striplings to the front.

(2) Economic resources. Even should the Allies fail to overwhelm the Central Empires by sheer weight of numbers, it was believed that the failure of Germany's economic resources would bestow the final victory upon the financially invincible coalition of London and Paris. After a year and a half of the war Germany was "nearly sucked dry," said Mr. E. S. Montague, M.P., Financial Secretary to the Treasury of Great Britain. The Entente, on the other hand, had hardly begun to draw upon its immense reserves; thanks to their own vast industrial resources, thanks also to their unshaken foreign credit, the Allies would be able to produce and purchase an inexhaustible supply of munitions; meanwhile Germany's approaching exhaustion would manifest itself in a bankrupt treasury, a failing food-supply, a ruined commerce, impoverished industries, and a diminishing flow of munitions. German economists, it is only fair to remark, published elaborate statistical statements to prove the ability of Germany to endure to the end, thanks to the willingness of her patriotic citizens to invest in the government's war-loans, and thanks also to the more efficient management of internal resources. In fact, the very inability of Germany to purchase supplies abroad was esteemed a financial asset, inasmuch as it prevented Germany from involving herself too heavily in debt to foreign creditors. Furthermore, the partisans of the Germanic Powers pointed out that the military successes of the Turco-Teutonic armies had immensely improved the economic situation of the Central League: the rich coal and iron regions of Belgium and Northeastern France (especially the Briey Basin, in Lorraine) were now supplying raw materials for the Krupp arsenals; the fertile plains of Poland and other Russian provinces, though woefully devastated, were expected to feed the German army of the east; the cattle and the copper

mines of Serbia and the food-products of the Balkan countries in general had been made available by Mackensen's drive through Serbia; and the Turkish victory over the Anglo-French forces on Gallipoli had ensured the safety of German communications with the Empire of Turkey in Asia, which if properly developed might supply Germany with much-needed meat, oils, cotton, and copper. Nevertheless, "in spite of the fact that the Central Powers have increased their reserves of men and materials by their successes," Lloyd George continued to boast that the Entente Powers had "an overwhelming superiority in the raw material of war" (Lloyd George, speech in the Commons, Dec. 20, 1915).

(3) Naval supremacy. With increasing frequency as the war dragged on, allusion was made to the historic parallel of the present war, the contest between Napoleon's military might and Britain's naval supremacy. As sea-power at the beginning of the nineteenth century had brought about the collapse of Napoleon's military empire, so it was assumed that in this present war of the twentieth century England's super-dreadnoughts would triumph over Germany's armies. Command of the seas enabled the Allies to utilize their own resources to the full, to preserve their own trade, to "capture" German trade, in part at least, and to institute a virtual blockade of Germany. Grand Admiral von Tirpitz's attempt to break the blockade by means of submarines had caused appreciable loss to British shipping and much annoyance to neutrals, but it had not even weakened the blockade. It remained to be seen whether German efficiency, which had already staved off a food crisis, could so wisely regulate the economic life of the nation, and so advantageously exploit the resources of Belgium, Northeastern France, Poland, the Balkans, and Asiatic Turkey, that the pressure of the British blockade would be unable to render nugatory the victories of German arms.

(4) Diplomacy. While confident in the ability of the Allies ultimately to defeat the Central Powers, public opinion in Entente countries anxiously awaited the intervention of new allies, whose armies might hasten the decision. Greece, it was hoped, would soon be persuaded, or constrained, to join the Entente; Portugal would surely come to the support of Great Britain; Spain and the Netherlands, though more doubtful, might in the end cast their lot with the victors; even the United States might conceivably enter the war in anger at German submarine outrages; above all, Rumania was momentarily expected to declare war against Austria-Hungary in the hope of conquering from the Dual Monarchy at least part of the coveted provinces of the Bukowina, Transylvania, and the Banat. The Germans, however, not only discounted the probability of war with Rumania, with the United States, with Spain, the Netherlands, or Greece, but even discussed the possibility that indignation at the Allies' interference with her trade might lead Sweden to attack the Entente.

(5) Finally, the spokesmen of the Entente Powers continued to voice the hope that the Central Powers would be embarrassed by internal disorders; that the more liberal parties in Germany would rebel against "Prussian militarism"; that the Slavic nationalities in Austria-Hungary would refuse to fight longer for a distasteful government; and that the Arabs would

rise against the Turks and the saner elements in Turkey would become disgusted with Enver Pasha's "Young Turk" clique. Reports of Socialist demonstrations in Germany, of riots and mutinies in Austria-Hungary, and of unrest in Turkey bolstered up the conviction of the Allies that in defending the cause of "liberty, democracy, and humanity" against Prussian "militarism," and Turkish "barbarism," they might to some extent enlist the secret sympathy if not the open aid of the "oppressed masses" in the Central Powers and Turkey.

### III. THE DIPLOMACY OF THE WAR

In a war of endurance—as the War of the Nations has clearly revealed itself—diplomacy may prove more decisive than gunnery. That the Entente Allies would possess the important advantage of a more skillful diplomacy was at first taken for granted by most observers who had followed in detail the apparently clumsy maneuvers of the German and Austrian foreign offices during the historic 13 days, July 23rd to August 4th, at the outbreak of the war; since August, 1914, however, the Central Powers had in a large measure retrieved their diplomatic reputation by successfully enlisting Turkey (Oct. 30, 1914), and Bulgaria (Oct. 14, 1915) as active allies, by preserving effective solidarity in their conduct of the war, by calculating to a nicety the limit of President Wilson's forbearance on the submarine question, and by fostering a very influential pro-German propaganda in Sweden, Spain, Greece, the United States, and other neutral countries. The diplomats of the Entente, on the other hand, had fatally bungled the Balkan situation; one of their intended Balkan allies, Bulgaria, had become an avowed enemy and the other two, Greece and Rumania, still remained uncertainly neutral. Italy's aid had been purchased dearly, and only after protracted bargaining. Most of all, the ineptitude of Entente diplomacy had been exhibited in the failure of the Allies to subordinate their own immediate political aims to the general advantage of the coalition. Italy had striven simply for her own territorial aggrandizement in the Trentino, toward Trieste, and in Albania; France had fought with more valor than calculation for the emancipation of her national territory; Russia's gigantic military efforts had been futile because they had not been coordinated with those of the Allies and because they had been undertaken without previous provision of adequate munitions; Serbia and Montenegro had been left disastrously to shift for themselves, the weak Anglo-French expedition to Saloniki being a diplomatic as well as a military failure; and Sir Edward Grey had suffered Great Britain's prestige in the Near East to be ruined by the failure of other ill-supported offensives, at the Dardanelles and in Mesopotamia. The Pact of London (Sept. 5, 1914), binding the Allies not to negotiate peace separately, had been a notable achievement, but it was becoming painfully obvious that a further agreement was needed, to secure the maximum effort from each of the Allies, to arrange a joint plan of campaign, and to decide in advance the terms upon which the war might be concluded.

THE WAR COUNCIL AT PARIS. Only by a long series of discouraging defeats were the Allies

taught the necessity of coöperation. After Russia's field army had been routed by Hindenburg; after the Anglo-French offensive of September-October, 1915, had proved to be merely another "nibble" at the German line; after Serbia had been conquered; after Gallipoli had been ingloriously evacuated; after Townshend had been surrounded at Kut-el-Amara; after the French lines around Verdun had been battered back from village to village and from hill to hill by the German Crown Prince's terrific attacks (see below, IV, 5)—only then did the Allies decide to hold a joint council of war. On March 27-28, 1916, the first general war council (an Anglo-French war council had been created in November, 1915) of the Entente Allies was held in Paris. France, Great Britain, Italy, Belgium, Serbia, Russia, Japan, Montenegro, and Portugal were represented, the first five by their premiers and foreign ministers, the others by ambassadors or ministers; Joffre, Castelnau, Kitchener, Robertson, Cadorna (Italian chief of staff), and Gilinsky (side-de-camp to the Czar) attended in person to give authoritative military information; while Lloyd George, British minister of munitions, and Albert Thomas, French secretary of state for munitions, reported on the all-important subject of the material equipment of the armies. The diplomatic unity of the Entente was reaffirmed by the war council. In order to secure unity of military action, an agreement was concluded among the general staffs of the various nations; the resignation of the Russian war minister, Polivanov, on March 29th, and of the Italian war minister, Zupelli, on April 5th, seemed to indicate that the military policies of Italy and of Russia had received unfavorable criticism at the war council; for the summer of 1916, concerted attacks on the Western, the Eastern, the Italian, and the Balkan fronts were planned. As for economic unity, the war council decided (a) to establish in Paris a permanent committee, representing all the Allies, to strengthen the blockade of the Central Powers; (b) to continue the Central Bureau of Freights in London and to take common action for the reduction of exorbitant freight rates and for the more equitable apportionment of the burdens of maritime transport; (c) to participate in an Economic Conference to be held shortly in Paris.

THE ALLIES' ECONOMIC CONFERENCE. Among the frequent consultations and conferences which followed in the wake of the general war council, the most significant was the Entente Powers' Economic Conference, which convened at Paris, June 14th-17th. The need of such a conference had already been emphasized by the general war council in March and by an Allied inter-parliamentary conference at Paris in April. The June Economic Conference during its brief session of three days agreed upon a far-reaching scheme of economic solidarity, which would not only enhance the effect of the blockade of the Central Powers during the war, but would also prolong the commercial struggle after the war by enforcing a partial exclusion of German manufactures from Entente countries and by establishing within the Entente a uniform system of laws respecting patents, corporations, bankruptcy, etc. In effect, the Entente Powers were to consolidate themselves into a huge economic coalition, a formidable engine of trade-war even in time of peace. The adoption of a scheme of

preferential tariffs among the Entente Powers, hinted at but not definitely proposed by the Economic Conference, would be the logical conclusion of such a policy. (See GREAT BRITAIN and FRANCE, paragraphs on *History*.) It may be noted in this connection that shortly after the June conference the Entente Powers proceeded formally to repudiate the Declaration of London as a code for maritime warfare and that Great Britain even went so far as to draw up an official "blacklist" of firms with German affiliations (for American protests against the British blacklist, see UNITED STATES AND THE WAR.) See TARIFF.

**ITALY AND THE ENTENTE.** In order that the war against German trade might be pushed with the utmost effect, it was urgently necessary that Italy be induced to abandon her absurd pretense of remaining at peace with Germany while at war with Austria-Hungary. Italy's delay in declaring war against Germany had given rise to a suspicion that the Italian government was playing false. In February, however, the Allies induced the Italian government to issue a decree prohibiting the exportation of German or Austrian merchandise through Italy as well as the transit through Italy of commodities for Germany or Austria-Hungary. The French Prime Minister, who visited Italy in February, apparently persuaded the Italian government to take the still more drastic action (February 29th) of requisitioning the 34 German merchant steamers interned in Italian ports. In March Italy participated in the Allies' general war council at Paris (above); early in April the British Premier, Mr. Asquith, visited Rome and conferred with Signor Salandra; in June Italy sent representatives to the Economic Conference at Paris; but still the declaration of war against Germany was not forthcoming. At length, however, on August 27th, Italy formally declared herself at war with the German Empire, since the German Empire was aiding Italy's enemies, Austria-Hungary and Turkey.

**THE INTERVENTION OF PORTUGAL.** The coalition of the Entente Powers was enlarged as well as consolidated during the year 1916. Portugal bound by treaty of alliance to furnish England with 10,000 troops, had promptly signified her willingness to assist her ally, in 1914, but had not been called upon to take action until February, 1916, when at Sir Edward Grey's request the Portuguese government commanded all German merchant vessels interned in Portuguese waters. Germany thereupon declared war against Portugal, March 9th, and Austria-Hungary followed suit, March 15th; in justifying the declaration of war, the German government asserted that Portuguese neutrality had been repeatedly violated, as, to cite but a single instance, in permitting British troops to pass through the Portuguese colony of East Africa or Mozambique. The intervention of Portugal was of little military advantage to the Entente, but it enabled the Allies to utilize the 40 Austrian and German ships confiscated by Portugal, and it might open a wider field for colonial bargains when the time arrived for peace negotiations. See PORTUGAL, *History*.

**RUMANIA AND AUSTRIA-HUNGARY.** Rumania also entered the war in 1916, as an enemy of Austria-Hungary. Before the war, Rumania had been affiliated with the Triple Alliance, on the basis of a defensive agreement, but since the

Balkan Wars of 1912-13 Rumania had shown a marked leaning toward Russia, and since the outbreak of the War of the Nations the Entente diplomatists had strained every nerve to win Rumania's support. During the first two years of the struggle, however, Rumania had remained neutral, whether because King Ferdinand was a Hohenzollern, or because Russia refused to offer Bessarabia as part of the price of Rumania's aid, or because the Rumanian war office feared to try conclusions with the conquerors of Poland or Serbia, or because Rumanian landlords found it too profitable to sell their wheat to the Central Powers. The moment Rumania entered the war she would lose the Austro-German market for her grain, meat, and petroleum, and the hostile league of the Central Powers would become an impenetrable wall barring direct commerce with all other nations except the Russian Empire, which could neither purchase Rumania's grain nor supply Rumania with manufactures and munitions. Isolated and inadequately equipped, Rumania might easily suffer the fate of Serbia. To declare war would be suicidal, unless victory could be certainly and speedily achieved. Therefore Rumania hesitated. On April 7th the Rumanian minister in Berlin signed a convention with Germany, providing for free interchange of domestic products. The situation took on a different aspect in the summer, when Russia inaugurated a successful offensive (see below, IV, 11) against Austria-Hungary and threatened to conquer for herself the provinces of the Bukovina and Transylvania, so ardently coveted by Rumanian irredentists. The Anglo-French victories on the Somme in July, the Italian conquest of Gorizia on August 9th, and the pretentious preparations of General Sarrail at Saloniki seemed to indicate that the Teutonic armies were no longer able to hold their own. Then Rumania struck. On August 27th the Rumanian crown council held a protracted session under the presidency of King Ferdinand and decided upon war. On August 28th the Rumanian minister at Vienna presented to the Austro-Hungarian foreign minister Rumania's declaration of war (effective August 27th). To the press the Rumanian government explained that although Rumania had formerly been in defensive alliance with the Dual Monarchy, altered circumstances constrained her to resume full liberty of action and to join the Entente Powers in order to safeguard her national interests and to emancipate the 3,000,000 Rumanians resident in Austria-Hungary. Germany, Turkey, and Bulgaria, as allies of Austria-Hungary, declared war against Rumania. From the statements subsequently made by the Austro-Hungarian foreign minister, and from the ease with which the Rumanians were able to invade Transylvania, it appeared that the Central Powers had been misled regarding Rumania's intentions and that by diplomatic pressure of a very strenuous character the Entente had hastened Rumania's intervention. For Rumania, intervention very soon meant disaster (see below, IV, 18), but for Entente diplomacy it was an undoubted, though tardy, success. See RUMANIA, *History*.

**RELATIONS BETWEEN GREECE AND THE ENTENTE.** For the failure of Entente diplomacy to induce Greece to join Rumania in attacking the Central Powers, four reasons may be assigned. In the first place, the Dardanelles fiasco, the an-

nihilation of Serbia and Montenegro, and the Anglo-French defeat on the Vardar (see *YEAR BOOK* for 1915) confirmed King Constantine's profound belief in the superiority of the German military machine; it is significant that when Rumania entered the war, exultantly confident of an easy triumph, Constantine shrewdly predicted that Rumania would speedily be conquered by German armies. Secondly, to jealous Greek observers the promise of Constantinople to Russia (see below *Discussion of Peace and of Peace Terms*) presaged the unwelcome advent of Russian Pan-Slavism as the dominant influence in the Balkans. Thirdly, the occupation of southern Albania by Italian forces antagonized Greek patriots who had cherished the hope of annexing that region to Greece. And in the fourth place, by encamping on Greek soil at Saloniki (see below IV, 19), and by vexatiously interfering with the rights of Greece as a sovereign and neutral state, the Allies outraged Greek pride without overawing Greek resentment.

First the Anglo-French expeditionary force had landed at Saloniki in October, 1915, and marched up the Vardar through Greek territory to Serbia, in disregard of M. Venizelos's formal (though confessedly insincere) protest. Then the Allies had claimed the right to retreat into Greek Macedonia in December, 1915, and fortify Saloniki, again disregarding Greek protests. Next, the remnant of the Serbian army had been landed on the Greek island of Corfu and the use of Greek railways demanded for the transportation of Serbian troops to Saloniki. In justification of these violations of Greek neutrality the Allies explained that since Greece and Serbia had signed a defensive alliance\* in May, 1913, neutrality was dishonorable to Greece. Furthermore, Great Britain, Russia, and France, as guaranteeing Powers under the treaties of 1863, asserted the right to interfere in the purely domestic affairs of Greece in case it should be necessary to prevent the overthrow of the Greek constitutional government; Constantine, they claimed, had violated the constitution in November, 1915, by arbitrarily dissolving the pro-Entente Chamber of Deputies which had been elected in June, 1915; the pro-German Chamber elected in December, 1915, was therefore regarded as unrepresentative and unconstitutional; hence the Allies considered it their "imperative duty" to intervene in behalf of Greek liberties. On June 21, 1916, the British, French, and Russian ministers presented a collective note at Athens, demanding (1) complete demobilization of the Greek army, (2) dismissal of the unfriendly Skouloudis ministry and appointment of a pro-Ally ministry, (3) dissolution of the pro-German Chamber of Deputies and election of a new Chamber under constitution conditions, and (4) removal of certain pro-German police officials. King Constantine immediately appointed Zaimis as Premier and promised full compliance with the Allies' demands, June 23rd. In September Zaimis was compelled to yield Greek telegraphs and posts to Anglo-French authorities. Lambros, who became Premier in October, was forced to surrender the Greek navy to the French Admiral du Fournet, October 11th and 16th; all German, Austro-Hungarian, Turkish,

and Bulgarian diplomatic representatives were unceremoniously expelled from Greece; Athenian newspapers were subjected to French censorship; Anglo-French marines were landed; an Anglo-French squadron trained its guns on Athens; the coast of Greece was blockaded; and Constantine was compelled not only to transfer his troops to the southernmost parts of Greece but also to turn over to the Allies a considerable part of the munitions and artillery of the Greek army. By the end of December the Allies had substituted coercion for diplomacy in dealing with Greece. See also *GREECE, History*.

The very fact that Constantine was not overthrown by a popular insurrection proved that the Entente had failed to win the sympathy of the bulk of the Greek nation. In Macedonia, however, where all pro-German agitation had been summarily suppressed by Anglo-French military authorities, and in the islands acquired by Greece in 1913, a pro-Entente insurrection was protected by the Entente; and its leader, Eleutherios Venizelos, the very able champion of an Anglophilic policy, was recognized as head of a provisional government in Crete and Macedonia. Venizelos declared war against Bulgaria, and his supporters volunteered to fight at the side of the Allies. In sum, the net result of the Entente's policy toward Greece had been to force the Greek government into an attitude of ill-concealed hostility and to win the insignificant military aid of a few thousands of Venizelist insurgents.

**THE QUESTION OF POLISH RELIEF.** One of the most tragic features of war-diplomacy was the failure of negotiations for Polish relief. The Teutonic invaders of Russian Poland in the autumn of 1915 had found the country battle-scarred and desolate; the retreating Russians had systematically devastated the land in order that the invaders might profit little by their conquest. Crops were burned. Cattle were driven away or killed, with the result that for lack of milk thousands of very young children perished. With the hope of relieving the misery of the Poles and Lithuanians, the United States government on Feb. 21, 1916, asked Great Britain for permission to send about 40,000 tons of foodstuffs monthly to be distributed among the civilian inhabitants of Warsaw, Lodz, Tchenstochova, Vilna, Kovno, and Biala Etappe, under the supervision of an American commission, on condition that the remainder of the civil population be cared for by Germany, and that imported foodstuffs be used solely for the needs of the civilian population. Great Britain and Russia, however, in their reply (dated May 10th) imposed the conditions that (1) the parts of Poland and West Russia under Austro-Hungarian occupation be included as well as the parts under German occupation, (2) that no native products be consumed by the constabulary, and (3) that Germany and Austria-Hungary undertake to provide for Serbia, Albania, and Montenegro. Germany rejected the Anglo-Russian stipulations, May 30th. A new humanitarian appeal from the United States, July 7th, elicited from Great Britain a proposal to permit the entry of food-imports into Poland, provided that all of the produce of Belgium, Northern France, Serbia, Montenegro, and Albania, as well as of Poland and Western Russia, be reserved for the native inhabitants of those re-

\* On August 15, 1916, *Le Temps* published what purported to be the text of the Greco-Serb treaty, on the authority of the Geneva correspondent of *Le Temps*.

gions, and provided that the work of relief be supervised by neutral agents. This proposal involved the principle that an invading army had no right to derive even a portion of its food-supply from conquered territory—a principle which Germany was quite unprepared to admit. The German and Austro-Hungarian governments therefore declined the British proposal, and the German Emperor informed President Wilson that owing to the cruel British blockade policy nothing could be done. Viscount Grey, for his part, accused the Central Powers of insincerity and inhumanity and charged them with attempting "to confuse issues and throw the greatest possible amount of odium upon the Allies"; Germany, he alleged, was simply pursuing "a deep policy of exciting public opinion against the legitimate use of sea power by those who are fighting for the principle of nationality."

**THE PROMISE OF POLISH AUTONOMY.** In accordance with the Allies' professed championship of the principle of nationality, the Poles had been promised unity and autonomy by the then Russian commander in chief, Grand Duke Nicholas, in the first month of the war; a year later Premier Goremykin had renewed the promise and announced that the Russian council of ministers had authority to draft a bill for Polish autonomy; but subsequently, Goremykin had been superseded by Stürmer, and the new Premier had delayed the announcement of definite plans regarding Poland's future; indeed, rumor had it that Foreign Minister Sazonov had resigned in indignation at Stürmer's ungenerous policy. Such was the situation when on Nov. 5, 1915, the German and Austrian emperors conjointly published a proclamation promising to create an independent Kingdom of Poland, "a national state with a hereditary monarchy and a constitutional government," in "intimate relations" with Austria-Hungary and Germany. Shortly afterwards Archduke Charles Stephen of Austria, a cousin of Francis Joseph, was appointed regent of Poland; presumably he was destined to become the first King of the new Poland. Although the exact frontiers of the new state were to be outlined later, a statement by the Prussian Minister of the Interior, November 20th, made it clear that no part of Prussian Poland was to be included, and a letter from the Austrian Emperor to the Austrian Premier promised Austrian Poland (Galicia) autonomy but not unification with independent Poland. With admirable tact, the Teutonic governments arranged to have the proclamation of Polish independence publicly read in Lublin and Warsaw in the Polish language, and followed by the hoisting of Polish flags while Teutonic military bands played the Polish national anthem. Elections were at once instituted for the State council or Upper House of the future Polish Parliament. The Polish Jews, moreover, were conciliated by the grant of special religious privileges. The principal purpose of this Austro-German magnanimity was shortly revealed, when proclamations were issued by Governor-General von Beseler at Warsaw and by General Kuk at Lublin exhorting the Poles to volunteer for service in the Polish army, which would join in the struggle against Russia. Russia, on the other hand, made haste to issue a counter-proclamation denouncing the German proclamation as illegal and insincere, threatening to treat as traitors rather than as prisoners of war any Russian

Poles captured from the new Polish army, and promising to create a unified and autonomous Poland on an ethnographical basis (which would mean including Prussian Poland and Galicia as well as Russian Poland), under the sovereignty of the Czar, after the war. The French and British premiers congratulated Russia upon her "generous initiative" and associated themselves with Russia's plans.

**DISCUSSION OF PEACE AND OF PEACE TERMS.** In the discussion of the possibility and the terms of peace, six features of the year's diplomacy stand out as of prime importance. (1) The Austro-Hungarian proclamation of a Polish kingdom (above) removed uncertainty regarding the intentions of the Central Powers in the matter of the territory conquered from Russia; at the same time it discredited rumors of a separate Russo-German peace, since the conflict was now brutally clear between the Teutonic determination to carve a pro-German Polish kingdom out of Russian territory and the Russian determination to annex Galicia and Prussian Poland to Russian Poland. Eleven days after the Teutonic promise to Poland, Russia issued a categorical denial of rumored secret negotiations with Germany. (2) Russian opposition to German aims was also clearly defined in respect of Constantinople. On December 3rd, the Russian Premier, M. Trepoff, revealed the fact that in March, 1915, at the time of the Anglo-French naval attack on the Dardanelles, the Entente Powers had definitely promised Constantinople to Russia. Inasmuch as the cession of Constantinople to Russia would completely destroy the German scheme of a Berlin-Constantinople-Bagdad railway, German publicists insisted upon the retention of Constantinople by Turkey. (3) The Entente Powers on February 14th formally pledged themselves not to make peace until Belgium was restored as an independent state; moreover, Belgium was guaranteed in possession of the Congo, April 29th. Such was the reply of the Allies to Bethmann-Hollweg's ambiguous pronouncement of Dec. 9, 1915, that Germany "must have military and political security" against the danger of Anglo-French attacks through Belgium. (4) In view of the Entente's oft-repeated demand of "security against future wars," Germany's qualified acceptance of the principle of a league of peace is decidedly worth noting. On April 5, 1916, the German Chancellor vaguely approved of the "peaceful arrangement of European questions after the war." But on Nov. 9, 1916, speaking more concretely of a league to enforce peace, Bethmann-Hollweg promised that "Germany will honestly cooperate in the examination of every endeavor to find a practical solution, and will collaborate for its possible realization. This all the more if the war, as we expect and trust, brings about political conditions that do full justice to the free development of all nations, of small as well as great nations. Then the principles of justice and free development, not only on the Continent, but *also upon the seas*, must be made valid. This, to be sure, Viscount Grey did not mention." "Germany is at all times ready to enter a league of peace which will restrain the disturber of peace."

(5) The debate between the German Chancellor and the Entente leaders on the question of concluding the war, culminating on the part of the Central Powers in a formal offer to begin peace negotiations, is well worth reproducing in

outline. On April 5th the German Chancellor predicted that Poland and the occupied portion of Lithuania would not be returned to Russia, and that "a new Belgium" must be created, in which the rights of the "oppressed Flemish race" would be respected; at the same time he declared that the sword was the only answer to the Allies' "claim of definitive and complete destruction of Prussia's military power." Mr. Asquith replied, April 10th, that the destruction of Prussian militarism meant not destroying Prussia, but establishing "the principle that international problems must be handled by free negotiation on equal terms between free peoples and that this settlement shall no longer be hampered or swayed by the overmastering dictation of a government controlled by a military caste." Sir Edward Grey reinforced Mr. Asquith's statement by reiterating that Belgium and Serbia must be restored and a "guarantee against aggressive war" obtained. On May 22nd, Bethmann-Hollweg retorted that the Allies rather than the Central Powers were guilty of militarism; that the Allies must "come down to a basis of real facts" and "take the war situation as every war map shows it to be." Again on June 5th, the German Chancellor announced that if the Allies persisted in shutting their eyes to the war map, "then we shall and must fight on to final victory." "We did what we could," he asserted, "to pave the way for peace, but our enemies repelled us with scorn. Consequently all further talk of peace initiated by us becomes futile and evil." Whereupon Lloyd George, in a letter of June 8th, wrote that "only a crushing military victory will bring the peace for which the Allies are fighting." Briand, the French Premier, likewise believed that peace "can only come out of our victory." By September 28th, the German Chancellor appeared to be fully convinced of the futility of peace proffers. Reminding the world that on Feb. 9, 1915, and on several subsequent occasions, he had declared Germany's readiness for peace negotiations, Bethmann-Hollweg blamed the Allies for desiring to conquer Constantinople, Alsace-Lorraine, Transylvania, and Trentino, and asked "Does any one dare to demand that we should make offers (of peace) in the face of Premier Briand's declaration that the conclusion of peace to-day would be a sign of weakness or a proof that memory was dead?" On the same day, September 28th, Mr. Lloyd George gave out an interview asserting that Great Britain would tolerate no outside intervention "until Prussian military despotism is broken beyond repair"; "the fight must be to a finish—to a knockout." A little later, on October 11th, Premier Asquith vigorously reiterated, "This war cannot be allowed to end in some patched-up, precarious, and dishonoring compromise masquerading under the name of peace."

In spite of repeated rebuffs, the Central Powers made yet another offer of peace negotiations, in December. Perhaps the purpose was to convince the clamorous German Socialist-Pacifists and the uneasy Hungarian politicians that the responsibility for prolonging the war rested upon the Entente rather than upon the Alliance; possibly the favorable effect of such an offer upon public opinion in neutral countries and upon popular sentiment in enemy countries was chiefly considered; or again, the Central Powers may have entertained the hope that if the Entente Powers

could be induced to negotiate their harmony might be destroyed and their resolution weakened. At any rate, on December 12th, Germany, Austria-Hungary, Bulgaria, and Turkey simultaneously submitted almost identical notes to the diplomatic representatives of Spain, Switzerland, and the United States, as well as to other neutral Powers and to the Vatican, proposing "to enter forthwith into peace negotiations." No concrete terms were offered by the Central Powers, but the Entente Allies were invited to enter into a discussion of "an appropriate basis for the establishment of a lasting peace," and apparently the intention was to hold *pourparlers* at The Hague during the winter, while hostilities continued. The notes were forwarded to the Entente Powers without comment by the neutral intermediaries. Immediately the Russian foreign minister, with the emphatic approval of the Duma, denounced the Teutonic peace offer and declared Russia's unwillingness to enter into any peace negotiations whatsoever. The Czar, in a proclamation to his armies, December 25th, declared that the "time has not yet arrived. The enemy has not yet been driven out of the provinces he has occupied. Russia's attainment of the tasks created by the war—regarding Constantinople and the Dardanelles, as well as the creation of a free Poland from all three of her incomplete racial districts—has not yet been guaranteed." Foreign Minister Sonnino of Italy and Premier Briand of France likewise disclaimed any intention of concluding a premature peace. In behalf of Great Britain, Mr. Lloyd George, who had but recently become Premier, declared on December 19th that while the Allies would wait to hear what terms Germany had to offer, little could be expected of peace negotiations at the present; "the very appeal for peace was delivered ostentatiously from the triumphal chariot of Prussian militarism." "It would be a cruel folly" not to stop Germany from "swash-buckling through the streets of Europe." As for the Allies' terms, the most precise announcement Lloyd George vouchsafed was "complete restitution, full reparation, and effectual guarantees."

(6) Within a week the Central Powers' peace offer was followed by an unexpected note from the United States to the belligerent nations, December 18th, setting forth a request that the warring governments avow "the precise objects which would, if attained, satisfy them and their people that the war had been fought out." Switzerland, Norway, Denmark, and Sweden officially expressed approval of this proposal. The note was not cordially received by the press of the Entente countries. Although Secretary Lansing took pains to explain that President Wilson's request was not suggested by the Central Powers, but was prompted by American altruism and American interests, the practical effect of the move was to support the Central Powers' plea for peace negotiations. Moreover, French and British newspapers took exception to President Wilson's statement that "the objects which the statesmen of the belligerents on both sides have in mind in this war are virtually the same, as stated in general terms to their own people and to the world. Each side desires to make the rights and privileges of weak peoples and small states as secure against aggression or denial in the future as the rights and privileges of the great and powerful states . . . each is

ready to consider the formation of a league of nations to insure peace and justice throughout the world."

In consequence of the peace overtures made by the Central Powers and by President Wilson, there seemed at the close of the year to be some prospect of a clearer statement of the issues for which the nations of Europe were ruthlessly sacrificing millions of men and billions of dollars. Regarding Alsace-Lorraine, to be sure, the issue was already clear: the French government had frankly announced its determination to reconquer these "lost provinces"; British cabinet officers had assented; but the German government could not be expected to yield unless in the extremity of bitter defeat.

The principal points at issue between Russia and the Central Powers, moreover, were tolerably well defined: Russia, with the approval of the other Entente Powers, had avowed the conquest of Constantinople, Prussian Poland, and Galicia as her unalterable aims; whereas the Central Powers wished to make Russian Poland independent and maintain Turkey in control of the Dardanelles. Japan's intention of appropriating the German leased territory of Kiaochow was avowed with equal candor. Uncertainty, however, still remained regarding Belgium, for while the Allies had solemnly pledged themselves to restore Belgium, they had never explicitly stated what they understood by Lloyd George's sonorous but cryptic phrase, "full reparation"; nor had Bethmann-Hollweg explained how a "new Belgium" was to be created which would live on friendly terms with Germany and respect the rights of the Flemish race. The restoration of Serbia had been demanded by the Allies less emphatically than the restoration of Belgium, and the Allies themselves, by urging Serbia to cede part of her Macedonian territory to Bulgaria, had given the world reason to believe that the ante-bellum boundaries of Serbia were not sacred. Rumania had come into the war for Transylvania, but in the face of Rumania's utter defeat (see below, IV, 20) would the Entente maintain Rumania's claim as one of the essential conditions of peace? As concerned Italy's aims, the Entente might reasonably be expected to insist upon the cession of the Trentino, Gorizia, and possibly Trieste and Avlona to Italy; but was the Italian's premier's statement to be literally fulfilled, that Austria-Hungary must be dismembered and the various subject nationalities be united to their brethren outside? The dismemberment of Turkey had been hinted at, but never explained in detail (aside from the question of Constantinople), as one of the Entente's objects. Nor had the British government ever formally renounced the conquest of the German colonies; in their war for the defense of small nations, would the Allies make this one of their conditions of peace? Most of all, neutral opinion was perplexed by the vagueness of the Allies in stating what they asserted to be their supreme purpose in the war, the destruction of Prussian military domination. Now that the German Chancellor had declared his willingness to consider a league to enforce peace, what further would the Allies demand? Disbandment or limitation of the German army or destruction of the German navy might be among the more obvious methods of destroying German militarism, but no such blunt statement of the Allies' intention had ever received official sanction. Nor, finally, had the Entente ever

formally stated whether it intended to enforce the popular demand of reparation, ship for ship, for every vessel sunk by German submarines. In the light of these unanswered but vitally important questions, the significance of President Wilson's initiative, and the response of the belligerent nations, may be more fully understood and appreciated.

**POPE BENEDICT XV AND PEACE OVERTURES.** Because of his unique international position, Pope Benedict XV was able to play a conspicuous rôle in advocating the speedy restoration of peace on a basis of mutual concession and justice. In a Lenten letter to Cardinal-Vicar Pomi, the Pope affirmed that "on several occasions" he had endeavored to "persuade the belligerent nations to lay down their arms and adjust their differences in a way compatible with human dignity, by means of an amicable agreement"; despite rebuffs, he could not "refrain from raising once again our voice against this war which appears to us as the suicide of civilized Europe"; and he urged all Christians to pray for peace and to give alms for the relief of war sufferers. In May, when a rupture between the United States and Germany seemed imminent (see UNITED STATES AND THE WAR), the Pope sent a special message to President Wilson. Although its purport was not made public, the note was popularly interpreted as an effort to prevent the United States from becoming embroiled in the terrible European conflict; in fact, it was asserted unofficially that the Pope had persuaded the German Emperor to return a conciliatory answer to President Wilson's peremptory "Sussex Note."

Later rumors suggested that the Pope had urged President Wilson to step forward as a peace-maker, and in confirmation of this view it was pointed out that shortly afterward, on June 2nd, the Papal Secretary of State declared that Benedict XV would welcome mediatory efforts on the part of Spain or of the United States. In his allocution to the consistory on December 4th, the Pope again raised his voice in behalf of peace and sternly denounced "the horrible madness of the conflict which is devastating Europe." "We behold," he said, "in one place the vile treatment inflicted on sacred things and on ministers of worship, ever of high dignity, although both the former and the latter should be inviolable by divine law and the law of nations; in another, numerous peaceful citizens taken away from their homes amid the tears of mothers, wives and children; in another, open cities and undefended populations made victims especially of aerial raids; everywhere on land and on sea such misdeeds perpetrated as fill the soul with horror and anguish." It will be noted that the Pope's words might be taken as a direct and vigorous rebuke to Germany for the Belgian deportations (see BELGIUM)—although neither Germany nor Belgium was specifically mentioned. Constantly endeavoring to alleviate the sufferings as well as to hasten the termination of the war, Benedict XV raised a Polish Relief Fund, appealed to the "children of America" to give generously for the relief of the children of Belgium, induced France and Germany to exchange crippled prisoners, and secured the liberation of the Belgian Catholic Labor leader, Arthur Verhaegen, who had been imprisoned by the German military administration.

## IV. MILITARY OPERATIONS

*(1) The Conquest of Montenegro.*

After the Austro-German-Bulgar armies under Field Marshal von Mackensen's able direction had completed their amazingly rapid conquest of Serbia (October–November, 1915) and driven the Anglo-French expeditionary force southward to Saloniki (December, 1915), it was a fairly easy task to overwhelm Montenegro's slender forces. Altogether the Montenegrin field army numbered less than 30,000 men. General von Koevess, who had been entrusted with an Austrian army for the conquest of Montenegro in December, 1915, quickly occupied the towns of Jakova, Ipek, Bielopolye, and Plevlie, on the eastern border of Montenegro; then, penetrating into the interior, the converging columns of his army defeated the Montenegrins in their last desperate stand in the Tara and Lim valleys, in January. Meanwhile another Austrian detachment, attacking the western frontier, from the Austrian harbor of Cattaro, built military roads up the northern slopes of the supposedly impregnable but really ill-fortified mountain stronghold of Lovtchen, around which wound the steep road to the capital, Cetinje, five miles distant. After three days' bombardment by the Austrian ships at Cattaro, Mount Lovtchen was stormed on January 10th. Lovtchen lost, the Montenegrins made no serious attempt to defend their capital, which fell three days later. News that the Montenegrin government had made terms, and that the army had laid down its arms, was flashed to the outside world by Austria-Hungary. A few days later, however, it appeared that the Montenegrins had refused to accept the terms offered by Koevess—which included the surrender of all arms—and that King Nicholas had fled to Italy, January 19th. The obstinacy of Montenegrin resistance delayed but could not prevent the complete subjugation of the country. The seat of the Montenegrin government was transferred to Lyons, France. Italy was much reprobed for having failed to succor Montenegro, especially since the Queen of Italy was a daughter of the unfortunate Montenegrin King. The most charitable explanation of Italy's seeming indifference to Montenegro's fate was that Austrian submarines lurking in the harbor of Cattaro would have rendered the transportation of Italian troops to Montenegro extremely hazardous.

*(2) The Invasion of Albania.*

The victorious columns of General von Koevess scarcely paused in their southward march; the 40 miles from the Montenegrin capital to the chief city of northern Albania, Scutari, were traversed in 10 days; the port of San Giovanni di Medua fell on January 25th; and early in February the invaders reached the heights of Tirana, in central Albania, 10 or 15 miles inland from Durazzo. In the meantime Bulgar forces had crossed into Albania from Serbia and occupied El Bassan, according to current reports, on February 12th. Essad Pasha, chief of the provisional government of Albania, offered but feeble resistance to the invasion. An Italian contingent, which had been stationed in Durazzo since December with the object of safeguarding the escape of Serbian fugitives (100,000 or more Serbians were transported to Corfu and there reorganized into a fighting force, to be

transported subsequently to Saloniki), evacuated the city in February, under fire of Austrian and Bulgarian guns. The larger Italian army at Avlona, sixty miles south of Durazzo, was not withdrawn, but reinforced, so that from Avlona as a base the Italians were able to dominate southern Albania, while the northern and western portions of the country remained in Austro-Bulgar possession. (See below, IV, 19.)

*(3) Russia's Winter Offensive.*

The price of the Austro-German victories in the Balkans was paid by the Austro-German armies on the Russian front, which had been weakened in order to supply effectives for Field Marshal von Mackensen's smashing offensive in Serbia. Having conquered Russian Poland, Courland, Kovno, Vilna, Grodno, and western Volhynia in a single brilliant campaign of three months' duration (July–September, 1915, see YEAR BOOK for 1915, pp. 713–714, 722), the Teutonic armies in the East had suddenly halted in their march and allowed the demoralized Russian army to reform its lines and to regain its courage. After a few feeble attempts to capture the Baltic port of Riga, Field Marshal von Hindenburg, who commanded the northern half of the Teutonic front, was content during the winter to rest on the defensive and even suffered his lines to be pushed back a few miles in the region of Lake Sventen, directly west of Dvinsk. Prince Leopold's army, which had been picking its way through the marshes of the Pripet River, was now reduced to a single army corps and had difficulty holding Pinak. Linsingen and Archduke Ferdinand, holding the line from Volhynia to the Bukowina, were obviously weaker than their opponent, Ivanov, and maintained their position along the valleys of the Stry, the Strypa, and the Dniester only by virtue of carefully prepared intrenchments, plentiful machine guns, concrete shelters, wire entanglements, and superior artillery. Altogether, the Austro-German strength on the Russian front could not have exceeded 2,500,000. The Russian line, already superior in numerical strength, was being rapidly reinforced by new recruits—War Minister Polivanov officially stated that Russia was able to maintain a fixed reserve of 1,500,000 men in training—equipped with Japanese rifles, and supplied with imported munitions. Three months of German inactivity (October–December, 1915) enabled Russia to recuperate so rapidly that by Christmas Eve, 1915, General Ivanov was prepared to inaugurate a general offensive on the southern 200 miles of the front.

The purpose of Ivanov's offensive was primarily political. As it was at this time still uncertain whether Rumania would throw her forces into the scale on the side of the Entente or on the side of the Alliance, a Russian victory in the region immediately north of Rumania might have a decisive influence, counteracting the effect of the Allies' reverses in Serbia and on Gallipoli (see YEAR BOOK for 1915, p. 719). At any rate, Rumania would be deterred from joining the Central Powers until the result of the new Russian offensive could be judged. With Rumania in mind, Ivanov concentrated his attention chiefly on Czernowitz, the capital of the Bukowina, just north of Rumania. As the Russian lines lay only 15 miles from the city, it seemed as if an important success could be

achieved in this sector at the smallest cost. Accordingly General Lechitaky, acting under Ivanov's direction, stormed the low wooded ridge just north of Czernowitz, December 28th, and brought the city itself under long-range fire. The Croat and Magyar defenders of Czernowitz, however, displayed unexpected valor; snow impeded infantry maneuvers; and after three weeks of vain endeavor Lechitaky abandoned the attack, about January 18th. The demonstration against Czernowitz had cost Russia about 60,000 men. In a military sense, it had been a costly failure; but it had prevented the Central Powers from persuading or constraining Rumania to join them, and it had induced the German General Staff to transfer Mackensen with five divisions back to the Russian front, thus relieving the pressure in the Balkans. Several minor aspects of Ivanov's offensive merit brief notice. While delivering his main blow at Czernowitz, the Russian commander had also engaged the German General von Bothmer at the railway crossing of Buczacz on the Strypa, 50 miles north of Czernowitz; still further north a Russian column had moved menacingly along the railway from Rovno toward Lutsk; and on Ivanov's extreme northern wing General Brusilov had forced the passage of the Styr in the neighborhood of the Sarny-Kovel Railway and had captured from General von Linsingen the towns of Kolki, Khriaak, and Chartoryak, in the first week of January. (See below, IV, 7.)

#### (4) *The Fall of Erzerum.*

A more successful Russian offensive was conducted in Armenia during January and February by Grand Duke Nicholas Nicholaevitch, the former commander in chief, who had been transferred to the Caucasus in September, 1915. Marshaling an army of 180,000 men against 150,000 Turks, the Grand Duke had been preparing for an advance in the spring, but when the Anglo-French forces evacuated the Dardanelles, January 9th, releasing 200,000 or more Turks for service in Asia Minor, he was forced to strike at once, before the Turks in Armenia could receive reinforcements. The very unexpected character of the attack, in the dead of winter, with roads blocked by snow and the thermometer registering from 20 to 40 degrees below zero, may account for the ease with which the unsuspecting Turks were routed. Under the actual command of General Yudenitch, who was entrusted with the execution of the Grand Duke's design, the Russian columns advanced westward from the Russo-Turkish frontier and about January 11th began their march through the bleak mountain passes leading into Turkish Armenia. The northern column isolated one Turkish corps and drove it pell-mell northwards; the southern column cut off two divisions from the main Turkish army; while the central column, following the highway from Sarikamish toward Erzerum, inflicted a crushing defeat on three Turkish divisions at Kuprikeui (33 miles east of Erzerum), January 16th-18th, and forced the crossing of the Araxes River in the midst of a blinding snow-storm. Ruthlessly pursued by Cossack cavalry, the Turkish infantry retired in disorder, strewing the road from Kuprikeui to Erzerum with discarded rifles, abandoned cannon, and half-frozen stragglers. Against Erzerum, reputed to be the strongest fortified city in Asiatic Turkey,

General Yudenitch now massed his heavy artillery. By a brilliant feat of arms a Siberian division planted its 8-inch guns on supposedly inaccessible peaks commanding the northernmost of Erzerum's many outlying forts. The fortified ridge just to the east of the city was thus outflanked and successfully stormed. Without waiting to test the antiquated inner circle of forts and ramparts, the German staff officers and the Turkish garrison precipitately evacuated Erzerum, February 16th, leaving 323 guns and a huge stock of military supplies to fall into the hands of the Russians. Only a small part of the garrison—less than 13,000 men—was captured; though the total Turkish casualties in the entire campaign were estimated at 60,000. The fall of Erzerum did not open the way to Constantinople—or to Bagdad, either, for that matter—as some of the newspapers too excitedly declared; it did, however, help to restore the Entente's prestige in the Near East; it delivered the best part of Turkish Armenia into Russian possession; and it will be recognized as a brilliant piece of strategy. Nevertheless, it must be considered that had Russia devoted her energy exclusively to the European battle-front, Czernowitz might conceivably have been captured in January, and Rumania induced to cooperate in the great Russian offensive of June, 1916, which might in that case have been infinitely more successful. (See below, IV, 14.)

#### (5) *First Battle of Verdun (February).*

In the scheme of a victorious German war against France and Russia, as outlined by General Bernhardt and as conceived, presumably, by the German general staff, the necessity had been emphasized of crushing France first and then turning at leisure to defeat slow-moving Russia. But France had not been crushed, in 1914. The ever-memorable battle of the Marne had saved her field army, her capital, and her most important fortresses—Verdun, Toul, Epinal, and Belfort. Unconquered and undaunted, France remained in 1915 and 1916 the very soul of the Entente. After a year and a half of the war Russia was cast down by defeat and by revelations of scandalous inefficiency and corruption—not to say treachery—among her generals and her bureaucrats; England was still so half-hearted that even partial conscription could be seriously opposed in the House of Commons; Italy had entered the war haltingly, fought lamely, and might be expected to limp off the battle field if given half a chance; Serbia and Belgium had been virtually wiped off the map; but in France the will to conquer seemed invincible. If by a final, irresistible blow, France could be convinced that further sacrifices for the recovery of Alsace-Lorraine would be futile, would not a victorious peace then be in sight for Germany?

If this train of thought had not of itself been sufficiently cogent to convince the German general staff of the necessity of a new offensive against France, the preparations which General Joffre was pushing forward for a great Anglo-French drive would have been reason enough for a German attack on Verdun in February. France was training her classes of 1916 and 1917, according to War Minister Gallieni's own statement, in preparation for "the moment when the intensive production of armaments and of mu-

nitions, together with the reinforcement of the battle line with new masses of men, may permit new and decisive efforts." Great Britain (q.v.), thanks to the Derby recruiting campaign and the January Compulsion bill (for single men), might be expected to throw another million of men into France in the spring, and her 2000 government-controlled factories were already producing tremendous and ever-increasing supplies of munitions. The expected Anglo-French offensive of 1916 would be of unprecedented power; furthermore, if Russia and Italy should attack simultaneously, Falkenhayn would then be unable to transfer troops to France without inviting disaster on the other fronts. Therefore it was imperative to forestall the Anglo-French offensive and if possible to force Joffre to throw his half-trained reserves into the battle-line prematurely.

Strategic, economic, and political considerations pointed to Verdun as the natural objective of a German attack. To be sure, the concrete-and-steel forts and the disappearing armored turrets upon which French military engineers had prided themselves before the war were no longer considered of great military value, since 13-inch howitzers had demonstrated the frailty of fortifications in Belgium. But the strategic importance of Verdun lay less in its fortifications than in its position. The army that possessed Verdun possessed the Heights of the Meuse, a plateau or ridge some five miles broad extending north and south like a natural palisade, just east of the Meuse River, on which Verdun is situated. Their position on the Heights of the Meuse would be of inestimable advantage to the French when the time came for an attempt to reconquer Lorraine; impetuously descending down the slopes to push the Germans back across the plain of the Woivre, to the eastward, the French troops would be supported by heavy artillery mounted on hilltops 500 feet or more above the floor of the plain, while the Germans would find it extremely difficult to emplace their heavy artillery on the clayey soil of the Woivre. Should the French lose the Heights of the Meuse, not only would a French attack on Lorraine be out of the question, but for defensive purposes no new line could be found of such great natural strength. The economic reason for the German attack on Verdun was usually ignored by military critics, but it was none the less vital; a glance at any industrial map of France will show that northeast of Verdun, toward the German border, are situated immensely valuable iron mines; a successful French offensive in that direction, especially if it attained the adjacent mining region of German Lorraine, would cripple Germany by depriving her of one of the chief sources whence the material of munitions had been drawn during the war. Finally, the political considerations which may have recommended a German drive at Verdun may be stated briefly: first, if France lost Verdun and the Heights of the Meuse French patriots would lose hope of realizing their chief object in the war—the reconquest of Alsace-Lorraine—and might consent to make peace; second, inasmuch as the German Crown Prince commanded the Verdun sector, a victory there would enhance the prestige of the heir to the imperial throne; third, the discontented elements in the Reichstag, particularly the Conservatives and National Liberals, who were bitterly criticizing Bethmann-Hollweg for his ten-

dency to yield to American remonstrances against ruthless submarine warfare, might be silenced by a great success like the capture of Verdun.

Every effort was made to disguise the German preparations for the intended move against Verdun. During January and February, while army corps after army corps was quietly taking its place in the Crown Prince's lines, while hundreds of 4-inch, 7-inch, 13-inch, and even 17-inch guns (according to the London *Times History of the War*) were being massed north of Verdun in the forest of Forges, Consevoye, Spincourt, and Gremilly, feints were being made against a dozen other sectors of the Anglo-French line. An attack against Nieuport, January 24th, and rumors of troop movements through Belgium, seemed to preclude a new drive toward Calais; on the Somme, the village of Frise was captured by the Germans; in Artois, on the bitterly contested slopes of Vimy Ridge, the Crown Prince of Bavaria delivered a violent attack against the French line on January 23rd and continued his efforts, with daily mine-explosions and infantry assaults, until the middle of February; at the extreme southern end of the Western front, the French lines southwest of Altkirch (in southern Alsace) were assailed and 15-inch shells began to drop into the French fortress of Belfort like heralds of an approaching storm. Nevertheless, while it still remained uncertain from what quarter the Germans would attack, Joffre sent six divisions of infantry and six of heavy artillery to reinforce the garrison of Verdun, in the week of February 11th-17th. Just as the battle was about to begin, the French made hasty efforts to put in fighting trim the elaborate intrenchments which General Sarraill had constructed in 1914, when profiting by the example of Liège and Namur he had learned to put his faith in trenches rather than in the redoubts and forts (36 in all) which bristled on every hilltop for five miles around Verdun. Meanwhile the Crown Prince had concentrated 14 German divisions against 3 French on a 7-mile sector from Brabant to Herbebois, where the outlying French trenches were about 8½ miles north of Verdun. All was ready for the great effort.

A terrific bombardment preceded the first attack, on February 21st. Never had artillery fire been of such withering intensity. High explosive shells of every calibre, from 4 to 14 inches, fairly obliterated the French first-line trenches. Groves which might have afforded shelter to French artillery were wiped out of existence, trees being uprooted and shattered into splinters. Under the terrible hail of fire, the French soldiers with their machine-guns and "75s"—those that escaped destruction—waited with grim determination to make the German infantry pay heavily for its advance. But the Germans did not intend to sacrifice their men needlessly. No advance was attempted until scouts and sappers had cautiously stolen forward to make sure that the bombardment had thoroughly accomplished its work of destruction. Then, while the German guns lengthened their range, so as to place a "curtain of fire" in the rear of the French trenches, cutting off supplies and reinforcements, the German infantry would be able with comparative safety to occupy the ruined French first line. Step by step the German howitzers would blast their way into Verdun; there would be no need of reckless infantry charges.

**GENERAL ROBERT NIVELLE**

**GENERAL FERDINAND FOCH**

**GENERAL SIR DOUGLAS HAIG, G.B.C.**

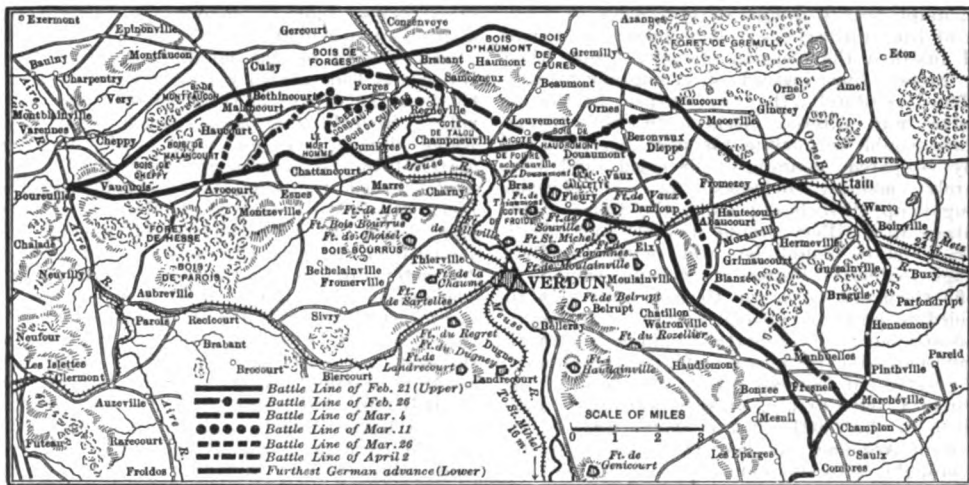

**GENERAL A. BRUSILOV**

**GENERALS OF THE ALLIED ARMIES**

At first the German offensive proceeded with the mechanical regularity of clockwork. The first line of French trenches, demolished by the preliminary bombardment, were easily occupied by German infantry during the evening of February 21st, on a three-mile front extending through the Bois d'Haumont (Haumont Wood), the Bois des Caures, and Herbebois, northeast of Verdun on the hilly right bank of the Meuse. Next day, the southern fringes of Haumont Wood and Caures Wood were cleared and the village of Haumont, heroically defended by Colonel Driant's chasseurs even after it had been leveled to the ground by German artillery, was carried by storm. Brabant was evacuated that night. French counter-attacks proved unavailing against the enormous odds. A third day of furious bombardment—this time accompanied by a more prodigal use of infantry—brought the Germans into Samogneux, Beaumont, and Ornes. On the following night (February 24th), while swirling clouds of snow concealed their movements, the exhausted and decimated defenders of Verdun wearily plodded back to

of the German onslaught, Verdun's fate would be almost certain. But French reinforcements, which had been withheld until Joffre was sure the Verdun attack was not simply another feint, arrived just in time, and with them arrived General Pétain, on the very day of Fort de Douaumont's fall. Pétain infused new energy into the demoralized defense. He had already proven his fighting temper in the battle of Artois (spring and summer of 1915) and in the Champagne offensive (September, 1915); before the war he had been an inconspicuous colonel, one of the many Catholic army officers who could scarce hope for promotion while anti-clerical politics held sway in the army; in actual warfare, however, his ability could not be ignored and he had speedily won the rank of general and the reputation of being one of Joffre's most brilliant subordinates. On February 26th, the morning after his arrival, Pétain ordered a counter-attack. By an impetuous charge the Twentieth Corps swept the Germans back down the hillside, and although a Brandenburg regiment remained ensconced in Fort de Douaumont,

BATTLE LINES AROUND VERDUN

strongly prepared positions on the Côte du Poivre (Pepper Hill) and the hill-plateau of Douaumont—the former 347 meters in height, the latter 388. In four days the Germans had battered their way over four miles, until at Douaumont they reached the first of the outlying permanent forts of Verdun. Eighteen German divisions were massed on a front of four and one-half miles, from Pepper Hill to Hardaumont. All during the day of February 25th the German infantry, wave upon wave, surged up the snow-covered slopes of the Douaumont plateau, only to recede under the murderous fire of French mitrailleuses and 75-millimeter guns. Towards evening, a supreme assault, viewed from a distant hill by the Emperor himself, carried Fort de Douaumont. The fort itself was a crumbling heap of ruins, but the hilltop (388 meters high) on which it was situated overlooked all the surrounding country and commanded a clear view of Verdun, less than five miles to the southwest. If the French could be hurled back from this their strongest natural position, before heavy reinforcements arrived, and while the defense was still suffering from the initial shock

possession of the fort was useless without command of the approaches and communicating trenches. For four days the battle raged incessantly about the fort and village of Douaumont until on the evening of February 29th and during the day of March 1st the German attack slackened. That brief lull marked the passing of the crisis. The impact of the German drive had been broken before a real breach had been made in the vital defenses of Verdun; the French had recovered from their surprise, and now with the heavy reinforcements and ample supplies which an endless train of motor lorries was ceaselessly pouring into Verdun, they were ready to dispute every inch of ground.

During the first phase of the battle, from February 21st to February 29th, the brunt of the German drive had been borne by the French lines on the Heights of the Meuse, where the Germans had battered their way over four miles from the Brabant-Ornes position southward to the Pepper Hill-Douaumont position. Even more ground had been gained, but at smaller cost, in the Woevre plain, directly east of Verdun, where on February 24th-25th the French

outposts had been pushed back six miles from Etain to Eix and the Germans had occupied Dieppe, Fromezey, Abaucourt, Moranville, and Blanzée. The new French line was drawn close to the edge of the plain, in front of the Heights of the Meuse. At Eix, at Manheuilles, and at Fresnes (held by the French until March 1st) the French resisted further pressure.

(6) *Verdun: Second Phase (March-April).*

In continuing the battle of Verdun beyond the first phase, the German general staff seems to have been swayed by political and sentimental rather than by military motives, just as at the beginning of the war French sentiment had demanded the imprudent invasion of the "lost provinces." Had General Pétain failed to stem the tide at Douaumont on February 26th, the German Crown Prince might well have achieved the brilliant feat of conquering Verdun in a fortnight; France might have been disheartened; possibly the war might have been concluded. During the first nine days of the Verdun battle, while there was still hope of achieving so great a triumph with a comparatively moderate sacrifice of life, military as well as political wisdom had justified the German offensive. But when the French line, instead of crumbling fatally, stiffened resolutely, the whole aspect of the offensive was altered. Henceforth the Crown Prince would be hurling his men against carefully prepared, cunningly concealed, and adequately manned defenses. As the French brought up their heavy guns, the German advantage in artillery would dwindle and disappear. Victory could be won neither swiftly enough to terrify France nor cheaply enough to profit Germany. Yet the German general staff decided to purchase victory, cost what it might. Discontinuance of the battle would be a humiliating confession of defeat and a severe blow to the prestige of German arms; the name of the German Crown Prince, already associated with failure in the battle of the Marne and in the battle of Argonne (see last YEAR BOOK), would be brought into disrepute; and the political situation of the German government would be extremely embarrassing as it attempted to face the scathing criticism of the Tirpitz party, which continued to demand ruthless submarine warfare, and the bitter complaints of the Socialists, who voiced the desire of the masses for food and for peace (see GERMANY). The battle, therefore, must continue.

In the second phase of the battle of Verdun, interest shifts to the left bank of the Meuse. Prior to March 1st, there had been little fighting except on the narrow front, six or seven miles in length, where the French line straddled the Heights of the Meuse, north of Verdun; the 12-mile sector east of the Heights of the Meuse had been flattened against the Heights, almost without resistance; but west of the Meuse only artillery had been active. Owing to the fact that the hills west of the Meuse were much less imposing than those on the other bank—for example, Dead Man's Hill, the key of the situation on the western bank, was 280 feet lower than Douaumont—an advance there would be easier than east of the Meuse; furthermore, it seemed imperatively necessary to push the line west of the Meuse at least as far south as the line east of the river, since the French guns on

the hills west of the Meuse were now in a position to rake the German line on the opposite bank from the flank and rear and by their fire prevent an effective assault on Pepper Hill. If the Crown Prince was to turn the Douaumont position by storming Pepper Hill, the menace from across the Meuse must be removed. Mr. Hilaire Belloc vouches for the statement that the 12 420-millimeter howitzers employed against the Heights of the Meuse in the first phase of the battle were allowed to remain east of the Meuse, ominously pointed toward Douaumont and Vaux; hence it may be inferred that the Crown Prince still regarded the Heights of the Meuse as the principal obstacle, the battle west of the river being merely a subsidiary feature.

On March 2nd the booming of heavy German artillery in the woods near Forges and north of Dead Man's Hill apprised General Pétain of the German decision to attack west of the Meuse. After four days' intense bombardment, two divisions of German infantry stormed Forges village, flung themselves across the Forges brook (which falls into the Meuse opposite Brabant), and charged up the forested ridge known as Côte de l'Oie (Goose Ridge). Before nightfall the Germans had penetrated the Bois des Corbeaux (Crow Wood) on the northern slope of Goose Ridge and had carried the village of Regnéville, between the Meuse and the eastern tip of the ridge. Bitterly the battle raged about Goose Ridge during the following week, until on March 14th the German attack swerved further west against the key of the whole situation, Dead Man's Hill. Le Mort Homme or Dead Man's Hill is a double-crested mound (the northern crest is usually indicated on maps as 265-meter hill, the southern as 295-meter hill) overlooking the village of Béthincourt to the northwest, Crow Wood and Cumières Wood to the northeast, Cumières and Chattancourt on the east, and Enes on the south. To the west, Le Mort Homme is overtopped by Hill 304 and by Hill 310; but if Le Mort Homme could be carried, Goose Ridge would no longer be tenable, and the Germans could advance along the riverbank past Cumières and Chattancourt, screened by Dead Man's Hill to the westward. On March 14th, some 25,000 Germans, advancing in five successive waves, surged past Béthincourt and up the slopes of Le Mort Homme until the northern or lesser crest (Hill 265) was attained. German bulletins, exaggerating the victory, claimed that Le Mort Homme had been stormed; but in reality the higher summit was still held by Pétain's undaunted men, and the frontal attack on Le Mort Homme had been only half-successful. Again the Crown Prince shifted his forces westward, and on March 20th Bavarian infantry began to fight their way westward through Avocourt Wood, whence they hoped to advance up the gentle western slopes of Hill 304, which might be called the key of Le Mort Homme in the same sense that the latter was the key of Goose Ridge. The centre of the Verdun battle had been constantly veering westward. In order to flank Douaumont plateau, the Crown Prince needed to storm Pepper Ridge, to the westward; in order to storm Pepper Ridge, he needed to clear Goose Ridge, west of the Meuse; in order to clear Goose Ridge, he had to carry Le Mort Homme; in order to carry Le Mort Homme, he shifted his attack still further west against Hill 304. A 12-day battle west of

Hill 304 delivered Malancourt and Haucourt (April 1st) to the Germans, but the French tenaciously clung to the all-important hill. From March 17th to April 8th, the German advance amounted to one mile on a six-mile front. Still doggedly determined to conquer at any cost, the Crown Prince exhausted nine infantry divisions in a ferocious assault against the whole French line west of the Meuse, from Avo-court to Crow Wood, April 9th-10th-11th. Yet in spite of the frightful carnage, Hill 304 and Le Mort Homme could not be conquered.

East of the Meuse, likewise, the Germans during March and April expended their strength in heroic efforts, but without gaining a decisive advantage. After the brief pause of February 29th-March 1st, the struggle for the Douaumont plateau had been resumed with intense violence. The ruined hamlet of Douaumont, just below the fortified crest of the hill, was entered by the Germans on March 2nd, regained by the French the next day, and reentered by the Germans on the 4th. A little more than a mile southeast of Fort de Douaumont lay the village of Vaux, in a snug little hollow, with Fort de Vaux half a mile further south, on a hilltop considerably lower than Fort de Douaumont. From Douaumont, the Germans turned their guns against Vaux. On March 8th the German infantry fought their way into the village, only to be promptly expelled by French bayonets; a German official bulletin describing this engagement announced that the armored fort of Vaux and several other fortifications had been stormed; subsequent events lead us to believe that the bulletin was prophetic rather than veracious. On March 10th-11th the Germans redoubled their efforts, but although they gained a footing in the village, their intrepid charges up the steep slope before Fort de Vaux came to grief in the wire-entanglements at the crest. New assaults on March 16th, under cover of darkness, were discovered by French searchlights and frustrated. After a fortnight's rest, the attack was renewed. This time the Germans sent an entire division to fight its way up the narrow "ravine of death," past Vaux village, past Vaux Pond, and to scramble up over the rim of the Douaumont plateau (which forms the northern slope of the Vaux Ravine) through the Wood of la Caillette. The attack succeeded, but the corpses lying thick in gruesome heaps on the ground the Germans had won had barely grown cold before a French counter-attack thrust the Germans back almost to their old position. While both sides lay exhausted in the region of Vaux and Douaumont, the Germans with indefatigable energy prepared to attack in a new quarter; the German howitzers hurled their high-explosive shells on Pepper Ridge (Côte du Poivre) until it seemed that the French trenches must be annihilated; then confidently on April 18th 12 German regiments made the attack; but from the shattered French trenches the machine-guns spoke with so deadly an effect that the Germans recoiled in dismay.

The repulse at Pepper Ridge on April 18th and at Le Mort Homme on April 9th-11th concluded the second phase of the great battle for Verdun. French and British military critics already announced "the battle of Verdun is won." True, throughout April and May each daily bulletin gave news of a mine exploded, a gas-attack resisted, a trench gained by the use of jets of

liquid fire, a clash of grenadiers, or a duel of artillery; some of the most sanguinary conflicts of the whole war were still to take place at Verdun; but having tested the French line on both sides of the Meuse, the Germans at last knew that Verdun could not be gained by a few sledge-hammer blows, and henceforth they fought not with the confident expectation of victory, but rather with the fury of baffled but indomitable determination. According to the most conservative English estimates, Germany had sacrificed 200,000 of her best troops, as compared with 100,000 French casualties; even German estimates admitted huge losses, while alleging the French casualties to be larger still. In the face of these figures it would be absurd to maintain that the German offensive had succeeded; surely 120 square miles of French territory were not worth 200,000 men. The Crown Prince had played for higher stakes, and lost. The great plan to take Verdun by surprise, to strike consternation into the heart of the French nation, to forestall an Anglo-French offensive, had obviously failed. Pétain's holding battle at Verdun may well rank with Joffre's holding battle at the Marne as one of the decisive conflicts of the war. (See below, IV, 10.)

#### (7) *The Russian Diversion (March).*

While France was heroically bearing the brunt of the Verdun offensive, Russia came to the aid of her ally by attacking the German lines in the East. The lake region south of Dvinsk was chosen as the theatre of the Russian attack, possibly because the Russian positions in this region were unfavorably situated and, in many places, would be flooded by the spring thaw. On March 17th the Russians opened a heavy fire on the German positions in the Disna valley, about half way between Lake Driswiaty on the north and Lake Naroch on the south, and some 40 miles south of Dvinsk. Confident that the bombardment had annihilated the German machine-gun shelters and artillery parks, the Russian infantry rushed forward in mass formation on March 18th; but the German machine-guns had not been put out of action; and the Russians were mowed down by thousands. The Russians renewed their attacks more cautiously during the succeeding weeks and stormed the village of Velikieselo, just east of Tveretch (which lies on the Disna, a few miles south of Viday). Less sanguinary battles were fought in the neighborhood of Lake Naroch (75 miles south of Dvinsk), Postavy (50 miles south of Dvinsk), Driswiaty (20 miles south of Dvinsk), and Illukat (12 miles northwest of Dvinsk). Still further north, a determined attempt was made to push von Hindenburg back from the Dvina River line at Jakobstadt. Also, in the extreme south, in Galicia, the Dniester bridgehead at Uscieszko was stormed, March 19th. According to a German official statement, the Russians employed 500,000 men in their attack on the northern sector, and lost at least 140,000 in the 10 days March 18th-28th. In April the Russians suffered several sharp local defeats at the hands of Hindenburg, and the Russian offensive suddenly expired—a costly failure, if we may accept the German statement; a comparatively unimportant maneuver for better positions, if we may believe Mr. Belloc. If, however, it prevented the Germans from sending additional

reënforcements to Verdun from the East, the Russian diversion was not without importance. (See below, IV, 11.)

(8) *The Allies' War Council.*

For the Entente Allies victory was contingent upon unity. If the British government could nerve itself to adopt general conscription, if France could continue her unstinted sacrifices, if Italy and Russia could be supplied with ample munitions and artillery, the Central Powers would soon be outmatched on every front. Even then, however, the Central Powers would enjoy an immense, perhaps a decisive, advantage. Thanks to an admirable network of strategic railways, they could at will shift troops and artillery from one front to another, and since German staff officers advised and practically dominated the general staffs of Austria-Hungary, Bulgaria, and Turkey, the whole surplus force of the Central Powers might be utilized as a sort of human battering ram, with which staggering blows could be dealt first to one enemy, then to another, as the German general staff directed. Even though the aggregate forces of the Entente might exceed the aggregate forces of the Central Powers, the Central Powers might still be able to win the war by battering-ram tactics; in order to deliver a decisive blow against one antagonist, the Central Powers might have to weaken all other fronts to such an extent that the thinly held lines would be forced back a few miles here and there; but the one important victory would more than outweigh the smaller losses; in other words, if the Germans were able to muster a 50 per cent superiority in men and artillery on one front, say against Rumania, while on five other fronts they were 10 per cent inferior to their antagonists, the gains of the Germans in Rumania would be far greater than the sum of the losses on the other fronts, since under the conditions of modern trench-warfare a very large numerical superiority is required to make any impression upon the enemy's entrenched lines. Hence it was supremely necessary for the Allies to draw together in so close a military agreement, that for the Entente there would be, in Briand's words, "unity of front"; whenever the German battering-ram was turned toward any vital portion of the Allied front, the Allies must meet it with an equal show of force; the Entente must not repeat its blunder of October, 1915—the blunder of permitting the Central Powers to gain Bulgaria's alliance and to open the road to Constantinople, simply because Italy, France, and England refused to give Serbia any substantial assistance in defending the wedge between Bulgaria and Austria-Hungary. Nor must the Allies waste their resources in isolated, futile, uncoordinated "offensives," such as the Anglo-French "forward movement" of September–October, 1915, and the disastrous British expedition in Mesopotamia; the Allies' separate offensives must follow a prearranged time schedule so that the Central Powers would be unable to meet each offensive separately by shifting troops back and forth from one front to another.

Because it recognized the necessity and sought to provide for the practice of such "unity of front," the War Council of the Entente Allies at Paris on March 27th–28th marks the begin-

ning of a new phase of the war. The far-reaching effect of the council was seen not only in the dismissal of inefficient war ministers in Italy and Russia (see above, III, *The War Council at Paris*); not only in the adoption of conscription in Great Britain (q.v.); but also in remarkable manifestations of the Entente's military solidarity. Russian troops arrived in France, to help hold the Champagne line; Belgian armored-motor-car units were sent to Russia; Russia, France, Great Britain, Italy, Serbia, and even Albania contributed to enlarge General Sarrail's "international army" at Saloniki. When, in May, the Central Powers launched a terrific offensive against Italy (see below), Italy was not left to her fate as Serbia had been, but was saved by a powerful Russian attack on Austria (June), which compelled Austria to transfer a large part of her forces from the Italian to the Russian front. Moreover, the offensives which the Allies attempted in the summer of 1916 were nicely timed: Russia opened the attack early in June while Austria was busy with Italy, and Germany with Verdun; Italy followed three weeks later and continued to bear heavily on the Isonzo front; Sarrail in Macedonia ostentatiously began an "offensive" the purpose of which was to prevent Bulgaria from lending aid to Austria-Hungary; and just at the moment when the Russian drive was reaching its climax, and when presumably the Germans would be rushing all possible troops to the Russian front, a combined Anglo-French drive, of very formidable proportions, was begun in France (July 1st). One of Joffre's orders of the day plainly intimated that this schedule of successive attacks had been prepared by the War Council in March. The scheme did not secure a complete triumph for the Entente, but at least it enabled Russia, Italy, and France to achieve a very considerable measure of success; Rumania was at last convinced of the Entente's superiority and induced to enter the war in August; and from June to November the Central Empires were forced to stand on the defensive on every front (except the unimportant Turco-Persian front). The German "battering-ram" could not be used until the exhaustion of Russia's munitions relieved the pressure of the concerted Allied offensive.

(9) *The Austrian Invasion of Italy (May–June).*

The Austrian offensive against Italy in May was a shrewd, but only partially successful, endeavor to cripple the Italian army before the Allies' plans for a concerted summer offensive on all fronts had reached maturity. It was common knowledge that Cadorna was busily preparing reserve troops and munitions for the great events of the summer; if he could be compelled to exhaust these reserves prematurely, or if Northern Italy could be successfully invaded, Italy might be virtually eliminated from the war for the remainder of the year. With this purpose, the Austrian chief of staff, Hoetzendorf, began in April to mass enormous forces in the lower Tyrol for an offensive in the Trentino. That the Austrian attack should be delivered in the difficult mountain-country of the Trentino, rather than in the Isonzo River valley, was explained by two considerations: first, that on the Trentino front the Italian line was less strongly held and less carefully entrenched; second, that whereas an offensive on the Isonzo, even if suc-

cessful, would only drive the main Italian army back into Italian territory, a successful drive south from the Trentino, rapidly advancing into the Venetian plain, might cut the communications and possibly compel the capitulation of the Italian army of the Isonzo.

Up to May, 1916, there had been no really strenuous fighting in the Trentino. Comparatively small detachments of Italian Alpini had penetrated a little way into the inhospitable uplands of the western Trentino border through several mountain passes; one of the most striking incidents on this sector had been the conquest of the Adamello Glacier by a few thousand white-clad Alpini, April 11th–May 13th. In southern Trentino, the Italians had progressed 15 miles up the Adige River (Val Lagarina) to the outskirts of Rovereto, about half way from the frontier to Trent. In the eastern Trentino, the Italian line crossed the Val Terragnolo and the Val d'Astico not far from the frontier, then cut more deeply into Austrian territory west of Borgo, in the Val Sugana. The Italian line was hardly more than a broken series of detached outposts pushed unsystematically into the enemy's country; for defensive purposes it was dangerously weak; the exposed salient southeast of Rovereto might easily be crushed between attacks from the west and north; no good second-line position had been prepared; and some portions of the front were poorly munitioned, since supply trains threading their way along mountain defiles were quite frequently destroyed by avalanches (in some regions all supplies had to be forwarded by means of aerial cars suspended from cables). Gravest of all was the shortage of artillery, a shortage only partly remedied by importation of a few heavy howitzers from France. Realizing the danger, and anticipating the inauguration of an Austrian offensive, General Cadorna as commander in chief had in April inspected the Trentino army (First Army) and had replaced the inefficient General Brusati (who was later retired from the army in disgrace) by General Pecori-Giraldi, who had shown exceptional ability as a corps commander.

Against the ill-prepared Italian lines in the Trentino the Austrians had quietly concentrated 350,000 men. Forty 12-inch Skoda howitzers, three or four German 420-millimetre (17-inch) howitzers, and several 15-inch naval guns, with 700 heavy guns of smaller calibre, and 1600 lighter field pieces, were massed on a front of less than 30 miles, ready to overwhelm the Italians by sheer weight of metal. After a terrific bombardment (May 14th), the Austrian infantry rushed forward on May 15th all along the front from Rovereto to Borgo. Just south of Rovereto, after five infantry attacks in quick succession, the peak of Zugna Torto (5415 feet) was taken, May 18th. On the left wing, south of Borgo, the Austrians stormed Armentara Ridge, May 19th. The brunt of the attack was toward the centre, converging in the general direction of the Italian cities of Asiago and Arsiero. Heavily backed by long-range artillery fire, a strong Austrian column hammered its way through the Italian position in the Val Terragnolo, east of Rovereto, storming the peak of Monte Maggio (May 18th), Monte Toraro (May 19th), and Col Santo (May 19th), and crossing through Borcola Pass into the upper Posina Valley, which leads down to Arsiero. Abandoning most of their heavy guns, the Ital-

ians in this region retreated in such confusion that in several instances whole regiments lost their way and valuable strategic points were sacrificed without a struggle. Between May 20th and May 24th Count Cadorna (who had personally taken charge of the Trentino operations) attempted to reform his line well inside the Italian frontier, south of Posina, east of Asiario and the Val d'Astico, and east of the Val d'Assa. The Austrians, relentlessly pursuing, descended the Posina Valley to Arsiero (seven miles inside the Italian border). The Italian troops that should have occupied the commanding height of Pria Forà (two miles south of Arsiero) on the night of May 29th lost their way in the dark and fell back further south to the inferior height of Monte Ciove. From Pria Forà, at an elevation of 4959 feet, the victorious Austrians could look down upon Schio and Thiene, less than 10 miles to the southeast, where the foothills of the Venetian Alps give way to a gently sloping plain, nowhere more than 500 feet above sea-level. Only 20 miles from Arsiero lay the city of Vicenza; 20 miles further, Padua; and another 20 miles across the plain would bring the invader to Venice. Exultantly the Austrian order of the day, June 1st, announced that only one small mountain ridge (Ciove) remained to be crossed before the army of invasion could swoop down into the Venetian plain. Fully conscious of the peril, Count Cadorna 10 days previously had ordered the concentration of every available reserve at Vicenza. To the troops holding the line south of Arsiero he issued the memorable order, June 3rd, "Remember that here we defend the soil of our country and the honor of our army. These positions are to be defended to the death." And they were defended. On Monte Ciove, the key-position, one gallant Italian brigade held fast though 4000 of its original 6000 men were either killed or wounded. Meanwhile, another Austrian column striking southward from Borgo had crossed the Val Sugana, stormed Armentara Ridge, broken through the frontier on May 26th, reached Monte Mosciagh (five miles inside the frontier) on May 27th, and occupied the Italian city of Asiago (eight miles inside the frontier) on May 28th. While the centre and left wing of the Austrian army of invasion had thus far been brilliantly successful, the right wing, which should have advanced south from Rovereto in order to shield the centre from flank attack, had encountered desperate resistance at Coni Zugna and Buole Pass, May 24th–30th. According to Italian reports, 7000 Austrians fell in a single day's fighting at Buole Pass, May 30th. On Monte Pasubio, also, the Italians stood unflinchingly against odds of four to one and under a nerve-shattering bombardment. For three weeks the Austrian howitzers deluged Pasubio, Buole, and Zugna with high explosives; for three weeks dense masses of Austrian infantry were hurled against the Italian positions; still the Italian defense stood firm. Had it yielded, the Austrian right wing could have advanced down the valley of the Leogra toward Schio; Cadorna's lines south of the Val Posino (in which lies Arsiero) would have been outflanked; and the plain of Venetia would have lain open to the invader. Thanks, however, to the heroic stand at Pasubio, the Italian line south of Arsiero was saved. Nor could the Austrians break through on the opposite flank, south of

Asiago (Asiago is nine miles northeast of Arsiero). Directly south of Asiago, in the region of Monte Lemerle and Monte Magnaboschi, on the rim of the Sette Comuni plateau, the Austrians made their final effort on June 18th when they flung 20 battalions (20,000 men) against a 2-mile front, and failed. The Austrian offensive was definitely checked.

As the result of a month's exertions, the Austrians had inflicted very serious losses on the Italian army; they had captured a large number of big guns, which the Italians could ill spare; they had recovered 270 square miles of Austrian territory; they had conquered 230 square miles of Italian territory; and they had improved their strategic position. On the other hand, as the events of the summer were to show, the Austrians had failed to avert Cadorna's offensive, and they had so seriously weakened their Eastern front that Russia was able to invade Galicia and the Bukovina in June (see below, IV, 11). In this connection it may again be repeated that the valorous Italian defense of Pasubio, Ciove, and Sette Comuni might have gone for naught if Russia had delayed her counter-attack by even as little as a fortnight.

(10) *Verdun: Third Phase (May-June).*

To an observer unaware that the Allies were holding immense forces in reserve for a concerted summer offensive, the military situation in May and during the first few days in June must have appeared very unfavorable indeed for the Entente Powers. The Italians were reeling back from the Trentino in dismay at the power of the Austrian offensive; in Macedonia the Bulgars began to move southward against Sarrail and seized Fort Rupel; Russia seemed impotent after her futile March offensive; General Townshend had just surrendered at Kut-el-Amara (below, IV, 14) in April; the convention by which Rumania in April agreed to sell her surplus grain to Germany was interpreted by the *New York Times*' "Military Expert" as signifying "that in all probability Rumania will not enter the war at all and if she does it will not be for a long time hence." Meanwhile in France the Germans were still delivering furious attacks on the Verdun sector and—to any one ignorant of the fact that Joffre was deliberately refusing to throw his reserves into the battle before the hour for the great offensive struck—it appeared that after almost two years of the war, the Anglo-French armies in France were still too weak even to hold their own against the Germans, not to speak of expelling the invader.

During May the French troops on Le Mort Homme, west of the Meuse, were compelled to relinquish trench after trench before violent German assaults. An intense bombardment of Le Mort Homme and Hill 304 during the first week of May prepared the way for a vigorous infantry attack, May 7th-8th, by three fresh divisions. A still more determined attack was delivered on May 17th-18th. But this was as child's play compared with the assault which ensued two days later. On May 20th over 60 German batteries concentrated their fire upon Le Mort Homme; on the northeastern and northwestern slopes of the hill, the French first-line trenches were literally blasted out of existence; then the German infantry charged in

"big columns of 500 or 600 men, preceded by two waves of sharpshooters"; in some places seven and eight successive waves of infantry, 50 yards apart, braved the French machine-guns; and the French first-line position on the northern slopes of Le Mort Homme was won. While the battle raged on the slopes of the hill, the summit (295) was evacuated by the French and became "no man's land," swept by shells from both sides. The new French line on the sides of Le Mort Homme resembled a horseshoe, with the opening at the north, where the Germans had thrust their salient toward the summit by the attack of May 20th. A few days later, May 23rd-25th, the Germans attempted to cut in behind the Mort Homme position from the southeast by storming Cumières village and driving the French line back to the outskirts of Chattancourt. The French horseshoe around Le Mort Homme would thus be converted into an extremely perilous salient, three quarters encircled by the enemy. A French counter-attack on May 26th, however, regained at least part of the heap of ruins which had been the village of Cumières, and during the next few days a savage hand-to-hand combat was carried on among the heaps of debris and in the cellars of Cumières. Finally on May 29th the 60 German batteries of heavy artillery again poured a torrent of high-explosive shells, continuing 12 hours, on the whole French line west of the Meuse from Cumières to Avocourt, and a new infantry assault was launched, in which at least five fresh divisions participated. It was the climax of the campaign on the western bank of the Meuse. The French were expelled from Cumières; Caurettes Wood, southwest of Cumières, was stormed; and the summit of Le Mort Homme was gained; but the French still clung to the southern slopes of the hill.

The battle on the right bank of the Meuse was quite as violent. General Nivelle, who had succeeded Pétain at Verdun when the latter was promoted, early in May, to the command of the whole army-group on the Soissons-Verdun sector, had secretly brought up a number of big guns behind Vaux, in preparation for an ambitious counterstroke. The German airships, which served as the eyes of the German artillery, were shot down at the very outset. Two days' bombardment preceded the French attack. Then at 10 minutes before noon on May 22nd the gray figures of French infantrymen were seen creeping forward, in irregular groups, toward the German position at Fort de Douaumont. It took exactly 11 minutes for the 129th French regiment to cross three lines of ruined German trenches and to reach Fort de Douaumont. Having penetrated the fort, however, the French were unable to expel the Germans from the northern corner, and on the 24th, after withstanding fierce counter-attacks for two days, the French yielded the fort before the onslaught of two Bavarian divisions. It was now the turn of the Crown Prince to resume the offensive on the Heights of the Meuse. Douaumont, Fort de Douaumont, the village of Vaux, and part of La Caillette Wood, it will be remembered, had already been conquered by the Germans. Fort de Vaux was the next objective. Throughout the week of May 31st-June 6th the battle for Fort de Vaux raged with inconceivable fury. First the Germans attacked

from the northwest; then a Bavarian regiment circled round to the east and gained a footing in the village of Damloup, three quarters of a mile east of Fort de Vaux; on the night of June 2nd the Germans actually set foot in the outer ditch of the fort; a new surprise attack from the southeast failing, new assaults were directed from the opposite quarter; in the night of June 4th the Germans attempted to scorch the French garrison with jets of liquid flame; still the garrison held out until all communication with the outside world was cut off and the men were left with neither food, water, nor munitions. Only then did Fort de Vaux surrender, June 7th. In recognition of the garrison's heroism, Commandant Raynal was permitted by his captors to retain his sword. By the reduction of Forts de Douaumont and de Vaux the Crown Prince had opened a breach in the outer ring of Verdun's permanent fortifications,  $4\frac{1}{2}$  miles northeast of the city. The next obstacle would be Fort de Souville, or rather the hill (precisely the same altitude as Fort de Douaumont) upon which Fort de Souville was situated, not quite two miles southwest of Fort de Vaux and a little more than two miles directly south of Fort de Douaumont. Fort de Souville might be approached either from the north, by way of Thiaumont Farm, Thiaumont Redoubt, and Fleury village, or from the northeast, by way of Damloup Redoubt, and the woods of Le Chenois and La Laufée. The Germans during June tried both approaches. Thiaumont Redoubt and Fleury were gained on June 23rd-24th, but were subsequently recaptured by the French; similarly Damloup Redoubt was captured, recaptured, and captured again. Throughout July and August Fleury and the two redoubts repeatedly changed hands. The battle lost its intensity, however, early in July, when a new drive, comparable to the German drive at Verdun, was begun by the Anglo-French forces on the Somme. From February to July, the Germans had gained 130 square miles or more of battle-scarred French territory, with two demolished forts and two score desolate ruins of villages. As the price of this gain, probably as many as 500,000 and certainly no fewer than 250,000 German soldiers had laid down their lives, or fallen wounded on the field of battle, or been captured by the French. According to Anglo-French critics, the French loss at Verdun had been very much smaller; according to German critics France had suffered even more grievously than Germany; probably we shall not be far from the truth, however, in guessing that the French casualties were slightly inferior to the German. But Germany faced the discouraging fact that her tremendous sacrifices had failed of their chief purpose, while France rejoiced in the consciousness that the battle-cry of the soldiers at Verdun, "Passeront pas!" ("They shall not pass"), had been realized in truth. (See below, IV, 20.)

#### (11) *The Russian Drive (June 4th-August 15th)*

The first of the series of great offensives planned by the Allies for the summer of 1916 was the Russian drive, which began on June 4th and continued for about 10 weeks. The Russians elected to deliver their attack on the southern third of the front. In the central sector, which extended north from the Pripet

Marshes across the Lithuanian plain to the lake region northeast of Vilna, the opposing line was held too strongly by hardened German veterans for General Evert to attempt an offensive there with his raw Russian recruits—it must be remembered that during the great retreat of 1915 Russia had lost 1,500,000 of her best troops. Nor was an offensive feasible along the northern third of the long Russian front; even if General Kuropatkin, commander of the Russian armies of the north, had the courage and ability to try conclusions with the master-strategist of Germany, Field Marshal von Hindenburg, the network of lakes and rivers and the broad stream of the Dvina would impede a Russian drive just as effectively as they had blocked Field Marshal von Hindenburg's advance toward Riga and Dvinsk. On the southern sector, however, between the Pripet Marshes and the Russo-Rumanian border, a Russian offensive would be both more feasible from a military point of view and more desirable from a political standpoint, since that portion of the line was mainly manned by a miscellaneous assortment of Austro-Hungarian nationalities, rather than by the invincible Prussians, and since a successful drive against Austria-Hungary would certainly relieve the pressure on Italy (see above) and probably induce Rumania to enter the war on the side of the Entente. Such an offensive would find its northern wing protected by the Pripet Marshes and its southern flank could rest securely upon the massive Carpathian ridge. Moreover, the commander of the Russian southern sector was by all odds the best man who could have been selected for the conduct of a great offensive: Lean, energetic, aggressive, indefatigable, Gen. Alexei Alexeivitch Brusilov had brilliantly led one of the Russian armies in the first invasion of Galicia; in April, 1916, he had been selected to succeed Ivanov in supreme command of the army group comprising the armies of General Lechitsky (in the Dniester region), General Shcherbatchev (in Galicia), General Sakharov (on the border of Galicia and Volhynia), General Kaledin (in Volhynia), and later, General Lesh (transferred in June from the region north of the Pripet to the district just south of the Pripet). Against the scant 800,000 men with whom the Austrian Archduke Frederick was able to oppose him, Brusilov could muster more than a million, with another million of half-trained recruits to draw upon for later reinforcements.

Brusilov's drive began most auspiciously. Military critics were no less surprised than the Austro-Hungarian trenchmen were dismayed at the immense quantities of high explosive shells with which the Russian artillery accurately and thoroughly bombarded the Austrian defenses. Following the artillery preparation, Brusilov on June 4th launched simultaneous infantry attacks at innumerable points all along the 250-mile front from the Pripet to the Pruth, rudely interrupting the festivities with which at that very moment the Archduke Frederick's sixtieth birthday was being celebrated behind the Austrian lines. In Volhynia the initial attack opened a wide breach in the Hungarian lines west of Rovno, which, it will be recalled, is the eastern apex of the famous Volhynian triangle of fortresses. The two western corners of the triangle, Lutsk and Dubno, had fallen into Austrian hands in 1915, but the Russians

retained Rovno. Advancing westward from Rovno, the Russians had two vitally important railways to rely upon, the southern running in a southwesterly direction from Rovno across the marshy Ikva valley, through the oak forests of Dubno, crossing the Galician frontier near Brody, and leading straight to Lemberg, the heart of Galicia; the other railway from Rovno followed a northwesterly direction, crossing the Styr River just north of Lutsk, and leading to Kovel, a point of great strategic value, since it was situated at the junction of three great railways—the Kiev-Warsaw line, the Rovno-Kovel-Brest Litovsk line, and the newly completed Kovel-Vladimir Volynski-Lemberg line. Brusilov's plan was to strike first at Lutsk, by a march across the open country in

military stores, heavy guns, and thousands of wounded soldiers were abandoned at Lutsk. Four days later, Rozyshche and Dubno fell. Screened by the swift advance of Cossack cavalry, the Russian infantry rapidly spread out in a great fan-shaped or wedge-shaped salient west of the Volhynian fortresses. Northwest of Rovno, the town of Kolki, on the Styr, was captured. Along the Rovno-Kovel Railway, the Russians reached the Stokhod River at Svidniki (12 miles northwest of Rozyshche). Along the highway west of Lutsk, they covered about 25 miles in the week of June 17th-23rd, and reached Zaturtsy, more than half way from Lutsk to Vladimir Volynski. Just south of the Lutsk-Vladimir highway, they penetrated as far west as Lokatchy (only 15 miles from Vladimir), Sviniutchy, and Gorokhov. On the Rovno-Dubno-Lemberg Railway, the Russians took Kozin (18 miles southwest of Dubno) on June 13th; the Plashevka River was forded by Russian infantry, though the water was chin-deep and one company was entirely engulfed; and on June 16th the frontier station of Radzivilov (30 miles southwest of Dubno) was occupied. Southeast of Radzivilov, the line was pushed to Podzavez and Novo Alexiniets. Within the short space of 13 days, June 4th-16th, the Russian offensive in Volhynia had driven a wedge 50 miles deep (at its furthest point, due west of Lutsk) and 90 miles broad (at its base) into the Austrian lines west of Rovno, and the VIII Russian Army, under General Kaledin, which had borne the brunt of the battle, had captured over 70,000 Austrians, with 83 guns, 236 machine-guns, and endless quantities of munitions and other supplies.

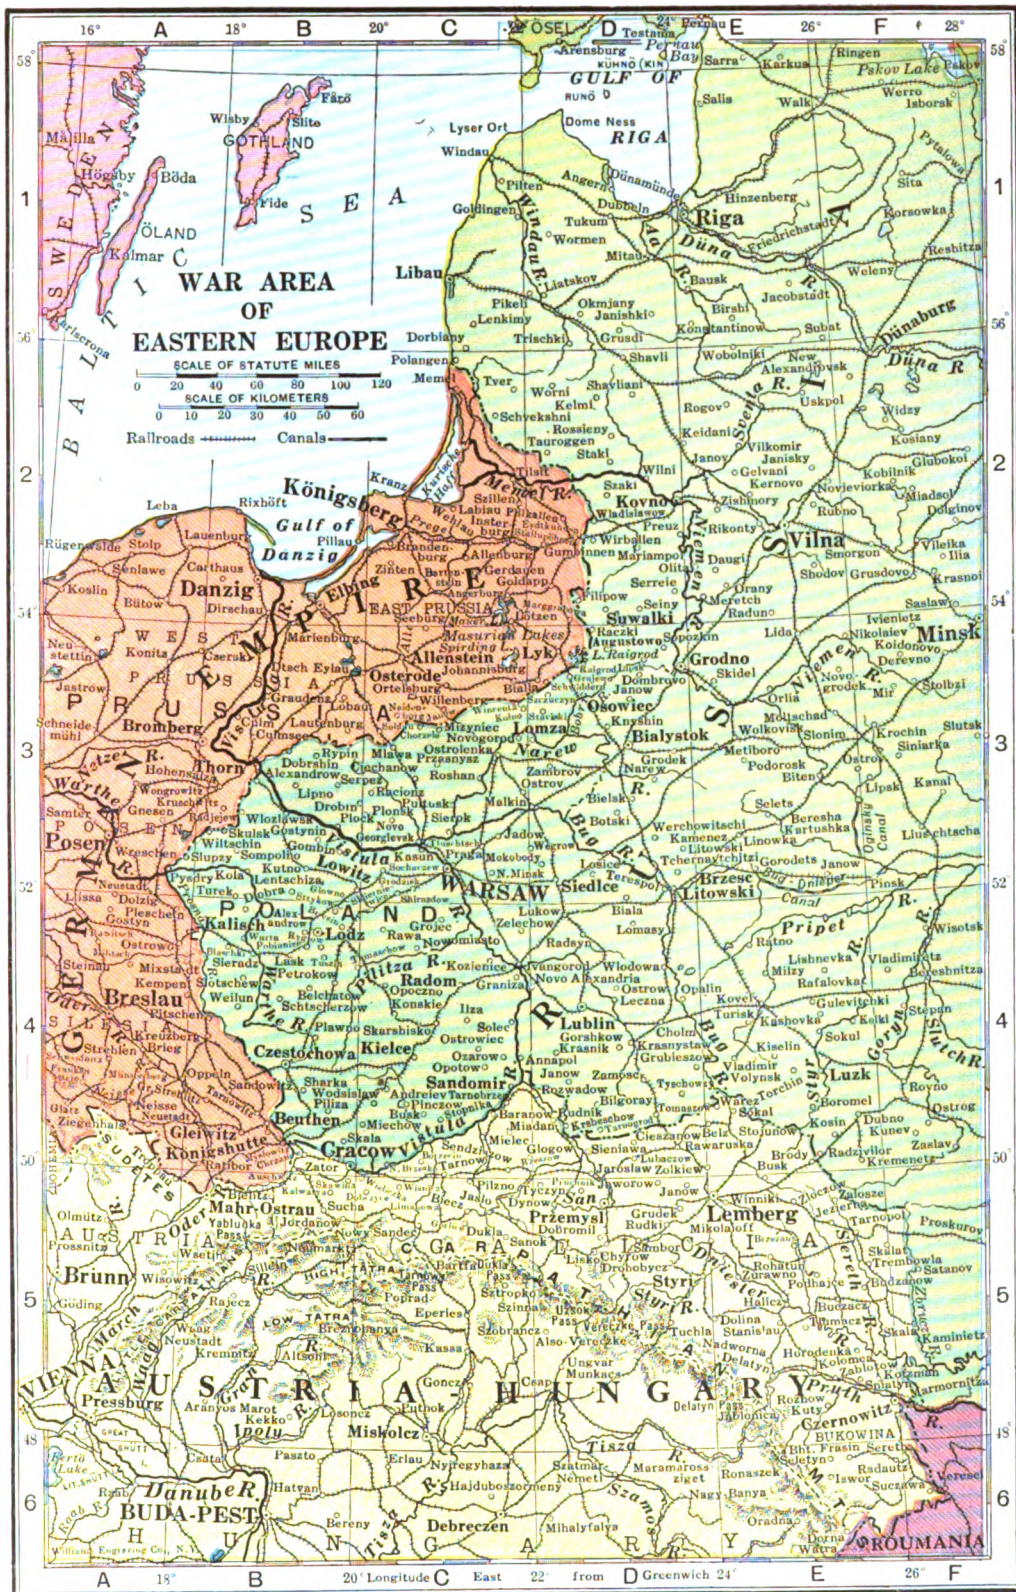

THE RUSSIAN DRIVE IN VOLHYNIA

the angle between the two Rovno railways, and then, having shattered the Austro-Hungarian lines, he could move north against Rozyshche, where the Rovno-Kovel railway crosses the Styr, and south against Dubno, where the Rovno-Lemberg line crosses the Ikva. The blow against Lutsk succeeded beyond hope. Through the gap caused by the collapse of two Hungarian divisions of Slavic composition, Brusilov's impetuous cavalry dashed on irresistibly; in the first two days the Russians advanced 20 miles across difficult terrain; and on the evening of June 6th they entered Lutsk, only a few hours after the city had been evacuated by the commander of the IV Austrian Army, Archduke Joseph Ferdinand. So precipitate had been the retreat of the Austrians that valuable

the great drive. Sakharov, on the border of Volhynia and Galicia, had assisted General Kaledin by capturing Radzivilov, on Kaledin's southern flank, but had been unable to break the strong line of the Bavarian General Count Bothmer, west of Tarnopol. Shcherbatchev had stormed the almost impregnable Austrian positions on the plateau of southeastern Galicia, where the deep river cañons, cut like trenches on the face of the tableland, offered wonderful advantages to the defense. Shcherbatchev's success was crowned by the capture of Buczacz, June 8th, on the Strypa River, commanding the angle of upland between the Strypa and the Dniester.

The left wing of Brusilov's army-group, the IX Army under General Lechitsky, had in the

meantime forced its way across the Dniester and into the Bukovina. Of the three bridges across the Dniester in this region, the one at Usciesko had been captured by the Russians in the spring; the one at Zaleshchyki was well defended by the Austrians; the easternmost bridge, at Utsie Biakupie, north of Okna, was selected by General Lechitsky because at that point the low southern bank of the Dniester could easily be dominated by Russian guns on the northern bank. On June 4th Lechitsky threw his infantry across the river at Utsie Biakupie and occupied Okna. Simultaneously another Russian column, from Bessarabia, took the Austrians by surprise at Dobronovtse, south of the Dniester and east of Okna, on the hilly peninsula between the Dniester and the Pruth rivers. By June 11th victory was assured at Dobronovtse, and more than 18,000 Magyar troops were captured. On the following day the bridgehead at Zaleshchyki, having been outflanked from the southeast, was evacuated by the Austrians; the town of Horodenka fell on June 12th, Sniatyn on June 13th. June 13th found Lechitsky at Sadagora on the northern bank of the Pruth River, opposite Czernowitz, the capital of the Bukovina.

Thus far he had captured 757 officers, 37,832 men, 49 guns, 120 machine-guns, and 21 trench mortars. On June 16th the crossing of the Pruth was forced, and on the following afternoon, June 17th, the Russians entered Czernowitz. The brilliant successes won by Brusilov in the first fortnight of his offensive were convincing proof of the recuperative power of Russia. Only eight months had been required to replace the armies which von Mackensen and von Hindenburg had shattered, and to train a new generation of petty officers and raw recruits; when it is considered that in order to provide munitions for a great drive, Russia's scanty domestic product had to be supplemented by huge imports from Japan, by way of the Siberian Railway, or from Great Britain and the United States, by way of the White Sea, the Russian achievement becomes all the more amazing. On the other hand, Brusilov's exploit was an amazing revelation of the hollow self-confidence of the Austrian military authorities. Apparently the Austrian general staff had taken it for granted that Russia was beaten, and that the advanced lines in Volhynia could be permanently fortified and thinly manned. In some sectors, the Austrians had constructed five successive lines of trenches—admirable trenches, 15 feet deep, and solidly protected with

timber and concrete work. Concrete-and-steel blockhouses, "neats" of machine-guns, and miles of intricate barbed-wire entanglements reinforced the line. Wherever possible, comfortable dugouts were prepared for the men. In the marsh region of northern Volhynia, elaborate parapets were constructed; log-roads were laid down, bridges built, and field railways extended to strategic points. Behind the lines, gardens and grain fields were cultivated by the soldiers; there were tennis courts and luxurious cottages for the officers; each army had its slaughter-house, its sausage-factory, and its bakery. Relying upon the strength of its carefully prepared entrenched lines, the Austro-Hungarian general staff had left less than 800,000 men to hold the Russian front, without reinforcements in reserve, while 350,000 men and a large number of Austria's heaviest guns were being used in the Trentino offensive (see above) against Italy. When the Russian attack came, the Austrians were taken at a tremendous disadvantage. Their artillery was too weak to reply effectively to the Russian "hurricane fire"; the Russian gunners were able to demolish the barbed-wire entanglements in front of the Aus-

THE RUSSIAN INVASION OF THE BUKOVINA AND GALICIA

trian trenches; and while the Russian infantry charged, the Russian artillery placed an impenetrable "curtain of fire" behind the Austrian first line, so that the Austrians were caught in their trenches like rats in a trap, and either surrendered or died by the bayonet.

Once the line had been broken, Brusilov's immense superiority in cavalry enabled him to harass the retreating Austrians, capture their guns, and make thousands of prisoners.

After the first fortnight, the Teutonic line in Volhynia began to stiffen, as German reinforcements arrived. At least four divisions were brought from France; others came from von Hindenburg's northern armies; the Austrians, also, with frantic haste, recalled division after division from Italy. Reinforced, the Austro-German armies west of Lutsk not only stood their ground, but regained a few miles by violent counter-attacks, between June 16th and July 4th.

Meanwhile, General Lechitaky, in the south, had been completing the conquest of the Bukowina. The towns of Storozynetz and Kutchurmare surrendered to him on June 18th; the following day he crossed the Sereth River (not to be confused with the other Sereth River, in Galicia), to the southward; Radautz, 30 miles south of Czernowitz, was occupied on June 21st, Gora Humora (20 miles further south), on June 22nd, and Kimpolung on June 23rd. By June 26th, according to a Russian *communiqué*, the greater part of the Bukowina was in Russian hands and Russian cavalry was "approaching the Transylvanian Passes."

From the Bukowina Lechitaky turned westward, into Galicia. About 60 miles west of Czernowitz is Jablonitsa Pass, through which a railway connects Maramoros Sziget and Korosmezo on the Hungarian slope of the Carpathians with Delatyn, Nadvorna, and Kolomea on the northern or Galician side. Toward this pass Lechitaky advanced up the Pruth valley. A strong Austrian army, which attempted to confront him at Kolomea, was thrown into confusion by a double flanking movement; on the south the Austrians were attacked by a Russian column which had advanced by way of the Kuty-Kossov-Pistyn-Jablanow road, while on the north there suddenly appeared a Cossack regiment which had swum the river in the rear of the Austrian position. In the battle before Kolomea, June 28th, the Austrians were completely routed and lost 10,500 in prisoners alone. On the following day Lechitaky entered Kolomea. A week later, a detachment of Lechitaky's cavalry, after a long and dangerous detour through the Carpathian foothills, by way of Berezow, cut the Delatyn-Korosmezo Railway 10 miles south of Delatyn. The fall of Delatyn ensued, on July 8th. Lechitaky was now master of the northern approach to Jablonitsa Pass. In the second phase of his campaign, thus happily consummated, he had captured no less than 31,500 men, 18 guns, and 100 machine-guns.

During July, interest shifted to Brusilov's northern armies, in Volhynia. On July 4th, General Leah, with an army borrowed from the sector north of the Pripet, attacked the Austro-German line on the plain skirting the southern fringe of the Pripet marshes, along the line of the Sary-Kovel railway. Starting at the Styra, north of Kolki, Leah, in three days, drove forward to the Stokhod, 30 miles further west, the last strong defensive line before Kovel, 20 miles beyond. A narrow, shallow river, the Stokhod, was nevertheless a serious obstacle, since its course was bordered by marshy flats, and German guns planted on the somewhat firmer western bank would play havoc with Rus-

sian artillery or infantry floundering among the reeds and water lilies on the eastern side. Nevertheless, the Russian generals Leah and Kaledin boldly attacked the Stokhod line July 28th-August 3rd and actually effected a crossing at Gulevitche, at Janovka, and at several other places, but for some reason they failed to advance further, although the important railway centre of Kovel now lay almost within gunshot.

While Leah and Kaledin were fighting on the Stokhod, General Sakharov dealt the Austrians a new blow southwest and south of Lutsk. At three in the morning of July 16th, Sakharov's troops stormed the Austrian trenches near Shklin (about 18 miles southwest of Lutsk), captured 13,000 men, and threw the Austrians back on the line of the Lipa River (a tributary flowing into the Styra from the west, at a point 25 miles south of Lutsk and 7 miles north of Berestechko) in a disorderly rout. A battle in the angle of the Lipa and Styra rivers, July 20th-22nd, gave Sakharov the town of Berestechko with 12,000 more prisoners. A third battle, July 25th-28th, in which 14,000 Austrians were captured, delivered Brody into Sakharov's hand. From Brody the victorious Russian general struck south down the valley of the upper Sereth, toward Zalostae, against the northern flank of General von Bothmer's Austro-German army, and forced the latter to fall back, about the middle of August, from the line of the upper Sereth and Styra rivers to the line of the Zlota Lipa River.

Just as Sakharov was outflanking Bothmer from the north, Lechitaky and Shcherbatchev turned the Bavarian general's right or southern flank. Lechitaky, after a month's inactivity, moved forward on August 7th, defeated his antagonist at Tlumatch, August 7th, and approached Stanislaw, in conjunction with Shcherbatchev, who had overcome stubborn resistance on the River Koropiets and was advancing along the northern bank of the Dniester. The Austrians made no attempt to defend Stanislaw, and Lechitaky occupied the city on August 10th. In the next few days Lechitaky swept the whole region between Stanislaw and the Carpathians, and occupied Solotvina, Nadvorna, and other towns. North of the Dniester, Shcherbatchev simultaneously captured Monasterzyaka, August 10th, crossed the Zlota Lipa near its confluence with the Dniester, and drove forward to Mariampol, August 13th. Up to August 13th, Shcherbatchev had captured 1263 officers and 55,158 men. With Shcherbatchev at Mariampol and Sakharov south of Brody, the German Count Bothmer, who had been tenaciously defending the Upper Sereth and the Middle Styra, found his flanks so seriously threatened that he hastily evacuated Podgaicy and Zborov August 13th, and fell back to the Zlota Lipa, which parallels the Styra at a distance of about 15 miles to the west. Bothmer's retreat was generally regarded as marking the last phase of the Russian drive, although Shcherbatchev made a further advance the first week in September, when he broke through the Zlota Lipa line at Brzezany, forced Bothmer back to the Narayuvka (a tributary of the Gnila Lipa, which flows into the Dniester about 15 miles west of the Zlota Lipa), and bombarded Halicz. Turkish reinforcements enabled the Austro-German army in this sector to deliver persistent

counter-attacks in September and October.

The result of the Russian drive was summarized by the Russian war office in the middle of August. The supposedly impregnable Austro-German lines in Volhynia and Galicia had been carried on the whole front of 250 miles to a depth varying from 20 to 50 miles, north of the Dniester, and over 60 miles south of the Dniester. The entire Province of the Bukowina had been conquered. Altogether, between June 4th and August 12th, some 358,000 men, 406 guns, 1326 machine-guns, and 338 mine- and bomb-throwers had been captured. If these official figures may be credited, the Central Powers lost more heavily in men and in *matériel* by the Russian drive than by the costly failure at Verdun. Indirectly, the Russian drive saved Italy, drew German troops from Verdun, and helped induce Rumania to enter the war. It was a far smaller victory than that won the previous summer by von Hindenburg, but it was still a very substantial success. To detract from the Russian victory, Austrian statements were issued pretending that the Russian losses in the summer of 1916 were much larger than the Austro-German casualties, and that therefore Russia was really the chief loser by her offensive. German military critics claimed that Russia's apparent inability to press her advantage further, or even to hold all her gains, after August 15th, proved her exhaustion. The French journal *Le Temps*, however, quoted General Kuropatkin to the effect that the Russian drive expired simply because the Russians had exhausted their supply of shells and worn out their howitzers and field guns.

(12) *The Anglo-French Offensive on the Somme (July 1st—).*

"The plan elaborated by the councils of the coalition (Entente) is now in full course of execution." Such was the order of the day addressed to the soldiers of France by their commander in chief, on the eve of the great Anglo-French offensive on the Somme. Counting on the invincible tenacity of the French army of Verdun, which had doggedly resisted the Crown Prince's terrific attacks throughout four terrible months, Joffre quietly pushed forward his preparations. Even while it seemed as if the strain on the men at Le Mort Homme and around Fort de Vaux must soon pass the limit of human endurance, Joffre was holding in reserve a powerful army of half a million sturdy young recruits, and was laying up huge stores of high explosive shells for the forthcoming attack on the Somme. Great Britain, too, was making ready for the impending battle. The British Parliament had adopted conscription for single men in January; for married men, in May; and the new recruits were being drilled with feverish haste, to make up for lost time. In May, the British army in France was about 1,500,000 strong and there were at least a million men—some estimates placed the number as high as three millions—in training or in reserve; how many of these reserves were rushed to the trenches before July cannot be stated with certainty, but before the commencement of the offensive, British troops were manning 25 miles of the front in Belgium and 65 miles in France (from the Franco-Belgian border to a point south of the Somme River—just before

the drive the British were replaced by French soldiers south of the Somme and for one mile north of the Somme), and in the initial phase of the Somme drive at least five British army corps (the VIII, X, III, XV, and XIII) participated, coöperating with a French force which must have been of approximately the same strength. As the battle developed, it may be remarked, all estimates of the forces engaged became illusory, since neither side found it possible to maintain the same troops continuously in the battle-line; the strain of the fighting was so intense that troops were quickly exhausted and had to be transferred to the reserve or to some quieter portion of the front, for a period of rest, while their places were taken by fresh troops or divisions borrowed from another sector.

In the technique of attack the Allies had many surprises in store for the Germans. Hundreds of airmen in "battle-planes" of an improved type, darting back and forth across the German lines, just before the attack, drove the German air-scouts to cover, dropped "fire balls" on the German observation-balloons ("sausages"), thus blinding the German artillery, and carried back wonderfully clear photographs of the German trenches, so that the Anglo-French artillery could accurately place its high-explosive shells precisely where they would do the most damage. The British, on Sir Douglas Haig's own admission, had "developed and perfected" the art of attacking the enemy with poisonous gas and liquid fire. An original British contribution to the art of trench-warfare was the "tank" (introduced in the second phase of the Somme drive, in September), a heavy motor-truck, encased in invulnerable steel armor-plate, and cumbrously moving on caterpillar treads. With machine-guns spitting murderously from apertures on either side, a "tank" could lumber across "no man's land" to the enemy's trenches, unscathed by ordinary rifle or machine-gun bullets; it could brush aside barbed-wire entanglements as though they were cobwebs; it could even crawl across trenches and shell-craters and spread confusion and panic behind the enemy's lines. Most impressive of all was the improvement of the British and French artillery. France now had a very large number of heavy guns, including some 16-inch mortars, and many military critics regarded the French howitzers, as well as the 3-inch field gun (the famous "*soixante-quinze*"), as distinctly superior to their German counter-parts. British arsenals, likewise, were now turning out howitzers of the largest calibre; the monthly output of heavy guns in Great Britain increased 600 per cent in the year from June, 1915, to June, 1916; the weekly consumption of high explosive was 11,000 times as great as the total output in the whole month of September, 1914; as many heavy shells could now be manufactured in four days as in the whole first year of the war. It was upon their tremendously powerful artillery that the Allies chiefly relied to blast a way through the wire entanglements, to plow up the intricate German entrenchments, to silence the German machine-guns before the infantry charge, and to cut off German counter-attacks by a "curtain of fire" or "*tir de barrage*." When on the night of June 30th—July 1st, the artillery "preparation" of the Somme drive reached its climax, "parapets crumbled beneath the impact of the

shells, cover hitherto thought bomb-proof was crushed and destroyed, and the garrisons of the enemy's works, sorely shattered in *morale*, were driven down into the deepest dugouts to seek shelter from the pitiless hail of projectiles."

Early in the morning of July 1st there came a lull in the thunder of the howitzers, as the gunners lengthened the range, and the infantry leaped forward from the trenches, with cheers, to charge the German lines. The attack was delivered on a front of full 30 miles, from Gommécourt to Estrées, on both flanks of the Somme River. The Somme, as a glance at the map will show, cuts the Western front at a point about 80 miles north of Paris and the same distance south of the Belgian coast. It is significant that the theatre selected for the 1916

tant town of Combles, three miles from the front, might constitute a preliminary objective. More important, however, than either Bapaume or Péronne, was the ridge or range of low hills (averaging about 500 feet above sea level), just behind the German lines north of the Somme; a line drawn west-and-east through Thiepval, Pozières, Bazentin-le-Petit, Longueval, Guillemont, Ginchy, Morval (Combles lay in a hollow, toward the eastern end of the ridge), and Saillisel will serve to indicate the line of the ridge, the chief immediate objective of the Allies' drive. Once firmly established on the Thiepval-Saillisel watershed, the Allies' guns could command the lower hillocks to the northward, the advance to Bapaume would be comparatively easy—as far as natural obstacles were concerned—and the German salient lying across the important Albert-Arras railway would be menaced, perhaps withdrawn. Some too sanguine "military experts" in the daily press looked for a speedy advance down the slopes northeast of Thiepval-Saillisel to Cambrai and Douai, two of the most important strategic centres behind the German lines; other critics predicted that the French would press on beyond Péronne to St. Quentin, thus making the German position at Noyon a dangerous salient; either of these operations, however, would have involved a more sweeping victory than the Allies had reason to expect.

In the first day of the great offensive, the British troops carried the villages of Montauban and Mametz, and broke through the "first line" (consisting of three or four parallel trenches, with a network of communicating trenches, altogether constituting the first of three or four entrenched "lines," a few miles apart) on a front of about seven miles, southeast of Fricourt, and along a four-mile front north of Thiepval, the attack was an utter failure. Moreover, on the front between Thiepval and the Somme, four strongly fortified villages—Thiepval, Ovillers, La Boisselle, and Fricourt—in which every ruined cottage and cellar was a nest of German machine-guns, still had to be reduced before the German first line could be completely carried. Fricourt was won on July 2nd, only after savage hand-to-hand fighting among the ruins; La Boisselle held out till July 3rd; Ovillers, till July 17th; Thiepval, till September 26th, although "Leipzig Redoubt," south of the village, was brilliantly stormed on July 7th. Greater success attended the French in the first week of the battle. On the northern bank of the Somme, where the French line joined the British, the French stormed the villages of Curlu (July 2nd) and Hem (July 5th). South of the river they fought their way more than three miles behind the German first line and entered the villages of Dompierre, Becquincourt, and Fay (July 1st), Frise (July 2nd), Herbécourt, Assevillers, Feuillères, Flaucourt, and Buscourt (July 3rd), Belloy-en-Santerre (July 4th), and Estrées (July 5th).

In the second week the French made slower progress. North of the river they advanced to Hardecourt-aux-Bois; south of the river, by a very vigorous attack on July 9th-10th, the French carried Biaches and La Maisonette Farm on the nearby hill. Péronne lay at their feet, only a mile distant, across the marsh-bordered Somme. In the fortnight's fighting, July 1st-

BATTLE OF THE SOMME SHOWING ANGLO-FRENCH OFFENSIVE IN 1916

offensive was 35 miles south of the Loos-Vimy sector, which had been attacked in September, 1915, and 45 miles south of Neuve Chapelle, the scene of the first British "drive" of March, 1915. The southward gravitation of successive Allied offensives proved that the Allies, temporarily at least, had abandoned hope of reconquering the rich coal and iron fields of Flanders and Artois; the new drive was launched not among mines and slag-heaps, but among the smiling agricultural villages of Picardy. The obvious objective for the British, who fought on the front north of the Somme, was the town of Bapaume, nine miles northeast of the front; for the French, who held a mile of the front on the northern bank and 4 miles (later extended to 10) south of the river, Péronne was the natural goal, 5¼ miles east of the French front and 12 miles southeast of Bapaume. Midway between Péronne and Bapaume, the less impor-

**TRENCH SCENES ALONG THE FRENCH LINES**

14th, the French had taken 12,235 prisoners, advanced their line on a front of 10½ miles to a maximum depth of 6 miles, and conquered 30 square miles of territory—a considerably smaller area than the Germans had gained at Verdun in the first week. On the British front, the second week witnessed a series of violent conflicts in Contalmaison, Trônes Wood, Bazentin-le-Petit, Bazentin-le-Grand, and Longueval; the Germans were fighting desperately for their second line, on the crest of the Thiepval-Sailliel ridge. In the first fortnight the British had advanced on a 10-mile front to a maximum depth of 3 miles, and had made 10,000 prisoners.

Badly battered, but not broken, the German line stiffened after the first fortnight. Furious German counter-attacks won back Biaches and La Maisonette Hill, opposite Péronne, on July 15th, for a few hours; again on July 17th, after six successive assaults in the midst of a driving rainstorm, the Germans recaptured La Maisonette Hill and Biaches, only to be again expelled. During the remainder of July and all of August, the French made very small gains, the principal achievements being the extension of the battle line as far south as Vermandovillers (July 20th), and the capture of Maurepas (August 11th-24th). The French drive had been brought to an abrupt halt. On the British front, likewise, the Germans made violent efforts to check the offensive. At points where the second line position had been pierced on July 14th-15th, namely, at Bazentin-le-Petit, Longueval, and Delville Wood, the German artillery hurled tons of asphyxiating and tear-producing shells; then the German infantry charged; at Longueval 13,000 men were flung against a narrow front of 2000 yards; at Delville Wood two German regiments were almost wiped out of existence July 29th. But at the end of July the British rested victorious in Longueval and Delville Wood; in addition, they had penetrated High Wood, in the centre, annihilated a battalion of the Prussian Guard at Ovillers (July 17th), and captured the village of Pozières, July 24th-26th, by a dogged fight from house to house. After a month of the great drive, the British found themselves in possession of 24 square miles of conquered territory.

During the long pause, lasting through the entire month of August, in which the Anglo-French drive came practically to a standstill, gaining at the most a few hundred yards here and there, the French and British heavy guns were being moved forward to new positions, to blast open the path for a new advance. A terrific bombardment on the night of September 2nd gave notice that the second phase of the battle had begun. At noon on September 3rd the infantry charged, with renewed confidence and dash. The British carried the village of Guillemont and part of Ginchy, east of Longueval, high up on the Thiepval-Sailliel ridge behind the German second position. The French simultaneously stormed the whole line from Le Forest (one mile south of Combles) to Cléry, on the north bank of the Somme. The decisive battle for the ridge, between Thiepval and Combles, now ensued. Gallant Irish troops, bearing the brunt of the battle on the heights northwest of Combles, expelled the Germans from Ginchy at the point of the bayonet and

repelled ferocious counter-attacks, September 6th-9th. British "tanks" (see above) appearing for the first time, smashed their way clean through the German trenches and were followed by infantry with hand-grenades. The artillery thundered with "unheard of violence." The whole German line between Thiepval and Combles was pushed over the ridge, and fell back from Martinpuich (September 15th), Courcellette (September 15th), Leshœufs (September 25th), and Morval (September 25th). Only Thiepval, at the northwestern end, and Combles, on the southeast, held out. But Combles was already enveloped from the south and east by the army of the French General Fayolle, whose troops had pushed out southeast of Combles to Bouchavesnes (September 12th), Le Priez Farm (September 14th), Rancourt (September 25th), and Frégicourt (night of September 25th). At the very last moment, on September 26th, the German garrison evacuated Combles, fighting as it went, and retired through the ravine to the northeast—the only avenue of escape still remaining open—under cross-fire from both sides. On the same day, at the opposite end of the ridge, Thiepval was stormed, and in the centre the British line was pushed to Gueudecourt, more than a mile north of the crest. The prisoners taken at Combles and Thiepval swelled the total, for the French, to 35,000; for the British, to 26,000. The French Generals Fayolle and Micheler, and the British Generals Gough (who took Thiepval) and Buttler were decorated by the President of the republic, in recognition of their exploit.

Torrential rains and weeks of cloudy weather hindered the further progress of the Anglo-French drive, by making it almost impossible to move the heavy guns forward, over muddy roads, or to direct artillery fire by aeroplane observations. The French infantry, to be sure, in October fought its way into Saily and Sailliel, but was repeatedly thrown back and did not completely occupy Sailliel until November 12th. The fall of Sailliel marked the completion of the conquest of the Thiepval-Sailliel ridge; at Saily, Sailliel, Leshœufs, and Gueudecourt the Allies were beyond the third (and last) line of trenches prepared by the Germans before the drive. On their right wing, the French had begun a movement against Chaules in September by capturing Chilly (September 4th), Soyécourt (September 4th), Berny-en-Santerre (September 4th-17th), and Vermandovillers (September 17th); in October they advanced through Bovent (October 10th) to the outskirts of Ablaincourt; in November Ablaincourt and Pressoire (November 7th) were taken; but Chaules still defied all assaults, though the French had been on its outskirts for four months. During the same period, the British extended their successes north of the Somme by storming "Stuff Redoubt" (September 27th) and part of "Schwaben Redoubt" (September 28th), on the crest of the ridge north of Thiepval. On the northeastern slope of the Thiepval-Sailliel ridge the British stormed Eaucourt l'Abbaye (October 1st-4th) and Le Sars (October 7th), the latter place being only four miles southwest of Bapaume, on the splendid Albert-Bapaume highway.

To the northwest of Le Sars lies the little ravine of the Ancre brook. In this ravine the German positions at St. Pierre Divion, Beau-

court-sur-Ancre, Beaumont-Hamel, and Grandcourt had become a dangerously slender salient, at the mercy of the British guns which had been posted on the heights of the Thiepval ridge. It was, therefore, no surprise when the British war office announced the capture of St. Pierre Divion (November 13th), Beaumont (November 13th), Beaucourt (November 14th), and part of Grandcourt (November 18th).

Measured in terms of territory, the results of the Anglo-French drive were small. Nowhere had the advance been more than seven miles. The total area conquered was approximately 120 square miles (erroneous newspaper estimates, confusing square miles with square kilometers, placed the figure higher), about equal to the area won by the Germans at Verdun, perhaps slightly greater. Neither Bapaume nor Péronne had been attained. Nevertheless, in his official report, Gen. Sir Douglas Haig, the British commander in chief, maintained that the drive had been a very great success, since it had achieved its three principal purposes: (1) it had relieved Verdun (see below, IV, 20); (2) by holding more than half of the German army on the western front it had enabled Russia to win a sweeping victory on the Eastern front; (3) it had worn down the German forces. By way of comment on the third point it may be noted that the German casualty list as added up by the British war office showed a grand total of 3,920,000 (since the beginning of the war) on December 1st, as compared with about 3,130,000 on July 1st; the difference, 790,000, represents the total German losses in killed, disabled, captured, and slightly wounded (the slightly wounded usually amount to 40 per cent or 50 per cent of the total) on all fronts, during the five months, July 1st to December 1st. In the battle of the Somme, therefore, the German loss could not have exceeded 700,000, allowing only 90,000 for losses on the Russian and Rumanian fronts. The British loss was announced as approximately 450,000 (deducting 37,000 for losses on other fronts from the grand total of 487,000 on all fronts) in the same five months (July to November, inclusive). The French published no official figures, but if the French lost even half as heavily as the British, the Somme drive must have cost the Allies in the first five months about 675,000 men, as compared with 700,000 for the Germans. It will easily be seen that the losses of the Allies on the Somme could not have been greatly inferior to those of the Germans. Anglo-French military critics and public men, however, were confident that even at such a rate, the Allies were indubitably winning the war by exhausting Germany.

(13) *The Italian Recovery (June-August).*

Two weeks after the beginning of the Russian offensive, Cadorna checked the Austrian invasion of Italy (see above) and inaugurated a vindictive counter-offensive. A new army of 500,000 men, with vast quantities of ammunition and heavy guns to replace those lost in the panicky retreat of a month before, were now at his disposition. In the face of Cadorna's assaults, the Austrians about June 25th began a retreat on the Trentino front and evacuated part, but by no means all, of the Italian territory conquered by their recent drive. On June 26th

the Italian war office joyfully announced the recovery of Asiago, Ceauna, and Monte Cengio; the following day, Arsiero and Posina. Arsiero had been "destroyed by fire" and Asiago lay in "smoldering ruins." The Austrian retirement was planned and executed with such skill that very few prisoners and almost no guns were lost. The new Austrian line ran from Rovereto southeast by way of Col Santo (6342 feet in elevation) and Borcola Pass to Monte Cimone (3690) on the edge of the Tonezza plateau north of Arsiero, and thence across the Astico and north of the Assa valley, turning northward near Asiago and running through Monte Meatta and Portule, to the frontier. Against so strong a front, the Italians made but little headway, although severe fighting continued throughout July. One of their chief successes was the capture of Monte Cimone, July 23rd, by Italian Alpini, who scaled the rocky face of the mountain with the aid of ropes and drove off the Austrians by means of bombs which were passed up from the valley below by a chain of men roped to the cliff.

Throughout July, Cadorna continued his energetic pressure against the Trentino front, but his principal blow was reserved for the Isonzo. Heavy mortars and howitzers, transferred from the Trentino, opened fire along the Isonzo front on August 4th, just five weeks after the beginning of the Anglo-French offensive on the Somme (below). The first day's attack, directed against Hills 121 and 85, just east of Monfalcone, was really a feint to draw the Austrian reserves toward the southern wing. The frontal attack delivered two days later along an eight-mile front opposite Gorizia was in deadly earnest. The Austrian trenches were pulverized by nine hours' continuous bombardment. The Italian infantry, believing that the hour of victory had at last arrived, charged with unexampled impetuosity. The heights of Monte Podgora and Monte Calvario on the western bank of the Isonzo, overlooking Gorizia across the stream, were carried the first day, as were also the heights of Oslavia and Monte Sabotino, further north. South of Gorizia, on the left bank of the Isonzo, the Italians stormed the summit of Monte San Michele, the key of the Gorizia position, for which they had striven in vain for 14 months. The Austrians resisted with stubborn courage. Isolated groups held out to the bitter end, in grottoes, in dugouts, or on inaccessible hilltops. General Boroevic, the Croatian general commanding the Austrian army of the Isonzo, urged his troops to "repulse the attack in such a way that none of the enemy shall escape." Nevertheless, after two days' battle, all the heights west of the Isonzo had been conquered, and Bersaglieri cyclists sent across the river into Gorizia. On August 9th the Italian infantry escorted King Victor Emmanuel and the Duke of Aosta (Italian commander on the Isonzo) in their triumphal entry into Gorizia.

After the conquest of Gorizia, there remained formidable obstacles to be surmounted before the Italians could hope to "emancipate" Trieste. East of Gorizia were frowning hills, bristling with Austrian guns. South of Gorizia, between the Wippach (Vipacco) Valley and the sea, lay the Carso plateau, barring the way to Trieste. The surface of this barren limestone mound or ridge, naturally scarred by in-

THE WAR IN EUROPE

numerable caverns and crater-like depressions, had been covered by the Austrians with a veritable labyrinth of entrenchments, blasted in the solid rock, with subterranean communicating tunnels. Under these circumstances, the progress made by Italy's August offensive on the western rim of the Carso represented a very considerable effort. Hill 121, Monte Debeli, Oppacchiasella, Monte Pecinka, and Nad Logem were won only by dint of the hardest kind of fighting. The loss inflicted on the Austrians by the whole Italian offensive on August 4th-15th was estimated by the Italians at 65,000; the Italians announced that 18,758 prisoners, 30 guns, 63 trench mortars, 92 machine-guns, 60,000 grenades, and other booty had fallen into their hands.

Again and again Cadorna renewed his attack on the Carso. A four-day offensive in September, carried out by 150,000 men, advanced the Italian lines but little; in October, Hill 208 and the village of Novavas were stormed; in November eight divisions of Italian infantry assailed the Austrian lines on the Carso and on the heights east of Gorizia and captured 9000 Austrian soldiers. The total number of prisoners claimed by Italy on the Isonzo front between August 6th and November 4th was 40,365. When these figures are compared with the losses inflicted on the Central Powers by the Anglo-French offensive on the Somme (see above), it will be seen that Italy's share in the summer's fighting was not disproportionately small, although it may still be questioned whether Italy's exertions would not have been more effective if applied in some other theatre of the war, rather than on the Carso, where the nature of the terrain enabled the Austrians to oppose the Italian army with numerically inferior forces.

*(14) Russian Victories in Asia Minor (February-July).*

The same month—July—that witnessed the beginning of the Anglo-French drive on the Somme, the Italian reconquest of Monte Cimone, and the Russian victory at Brody was signalized also by a notable Russian triumph in Asia Minor, viz. the capture of Erzingan. The Grand Duke Nicholas, it will be recalled (see above, section 4), had advanced from Russian Transcaucasia into Turkish Armenia in January, inflicted a crushing defeat upon the Turks, and occupied the fortified city of Erzerum in February. During the spring the Russians had steadily advanced. The Grand Duke's northern wing swept the Black Sea coast from Batum to Trebizond, captured Trebizond (April 18th), and pushed on to the westward, taking Platana on May 11th; his centre had advanced against fierce resistance in the region just west of Erzerum; and his right had reached Mush (February 18th) and Bitlis (March 2nd), south of Erzerum and west of Lake Van. In July the Russian armies west of Erzerum drove forward with new vigor. Bulletins of victory followed one another in rapid succession, the capture of Mamakhatum being announced on July 12th, Baiburt, July 16th, and Gumushkaneh and Ardasar, July 22nd. Finally on July 25th the Russians took the city of Erzingan (110 miles west of Erzerum). Erzingan was an important strategic centre, where the barracks and arsenal

of the Tenth Turkish Army Corps were located.

*(15) British and Russian Reverses in Mesopotamia, Persia, and Kurdistan.*

In other operations against the Turks, however, the Allies were less successful. The ill-advised British expedition led by General Townshend (see 1915 YEAR BOOK, p. 720) against Bagdad, having rashly ventured more than 300 miles up the Tigris Valley, to within 18 miles of Bagdad, had been overwhelmed by superior Turkish forces, thrown back to Kut-el-Amara, 100 miles southeast of Bagdad, and there besieged, early in December, 1915, by Nured-Din Pasha. The detachment sent to relieve Townshend reached Umm-el-Henneh and Felahie but essayed in vain to cut its way through the Turkish line at Sanna-i-yat, 16 miles east of Kut-el-Amara. So completely was Kut-el-Amara invested, that no provisions could be sent to the starving garrison except by aeroplane. Nine tons of supplies were sent to Townshend in April by this means, but they were insufficient. At last the pressure of hunger constrained Townshend to surrender, on April 28th, after a siege of 143 days. Depleted by fighting and famine, Townshend's force at the time of surrender numbered only 8970 men, according to British reports, or at most 13,300, according to the Turkish announcement. Responsibility for the disastrous Bagdad expedition was attributed to Gen. Sir John Nixon, former commander of the British forces in Mesopotamia. Public opinion concurred in the verdict of a leading British historian of the war, that "on every ground of strategy and common sense," Townshend's expedition "was unjustifiable."

Misfortune also befell the Russian expeditions against Bagdad and the Bagdad Railway. During the winter of 1915-16 one Russian column had marched through Western Persia along the caravan route through Hamadan (Dec. 20, 1915), Kermanshah (Feb. 26, 1916), and Kerind (March 12th) to the Turco-Persian frontier, about 150 miles northeast of Bagdad. But in the summer, after the fall of Kut-el-Amara, this Russian column was routed by the Turks and pursued back into Persia, past Kerind, Kermanshah, and Hamadan. Another Russian army, about 200 miles further north, had crossed from Northwestern Persia into Asiatic Turkey near Rewanduz with the aim of cutting the Bagdad-Constantinople route at Mosul, 250 miles northwest of Bagdad and less than 100 miles west of Rewanduz; but this column, too, met defeat in July. Still further north, in the region west of Lake Van, the Russian army, which had taken Mush and Bitlis in the spring (see above, section 5) and advanced toward Diarbekr (on the Bagdad-Constantinople route, 200 miles northwest of Mosul), was so seriously defeated that it evacuated Bitlis and Mush August 7th-8th; Mush, however, the Russians were able to regain a fortnight later. The result of the year's fighting in Armenia, Kurdistan, Mesopotamia, and Persia may be summarized in the statement that, while the Russians had conquered "old Armenia," the Turks had not only repulsed three Russian and one British expedition against the Bagdad route, but had even undertaken an extensive aggressive campaign in Northwestern Persia.

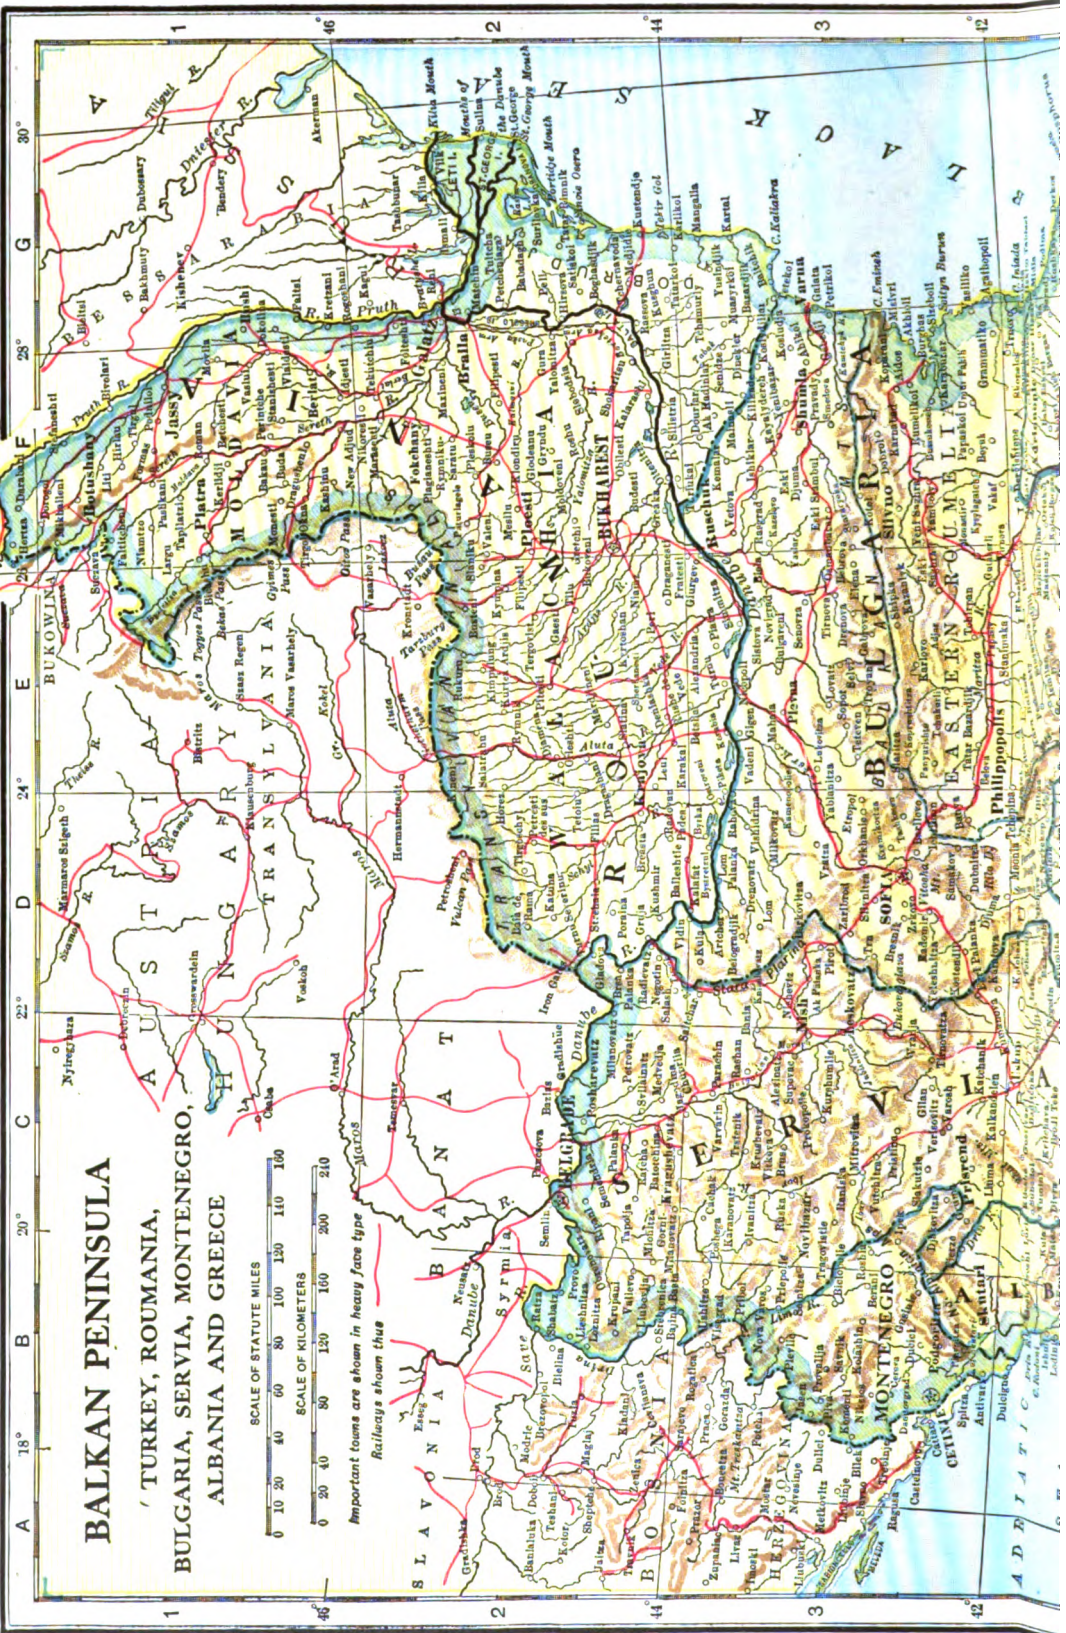

*(16) Rumania's Intervention (August).*

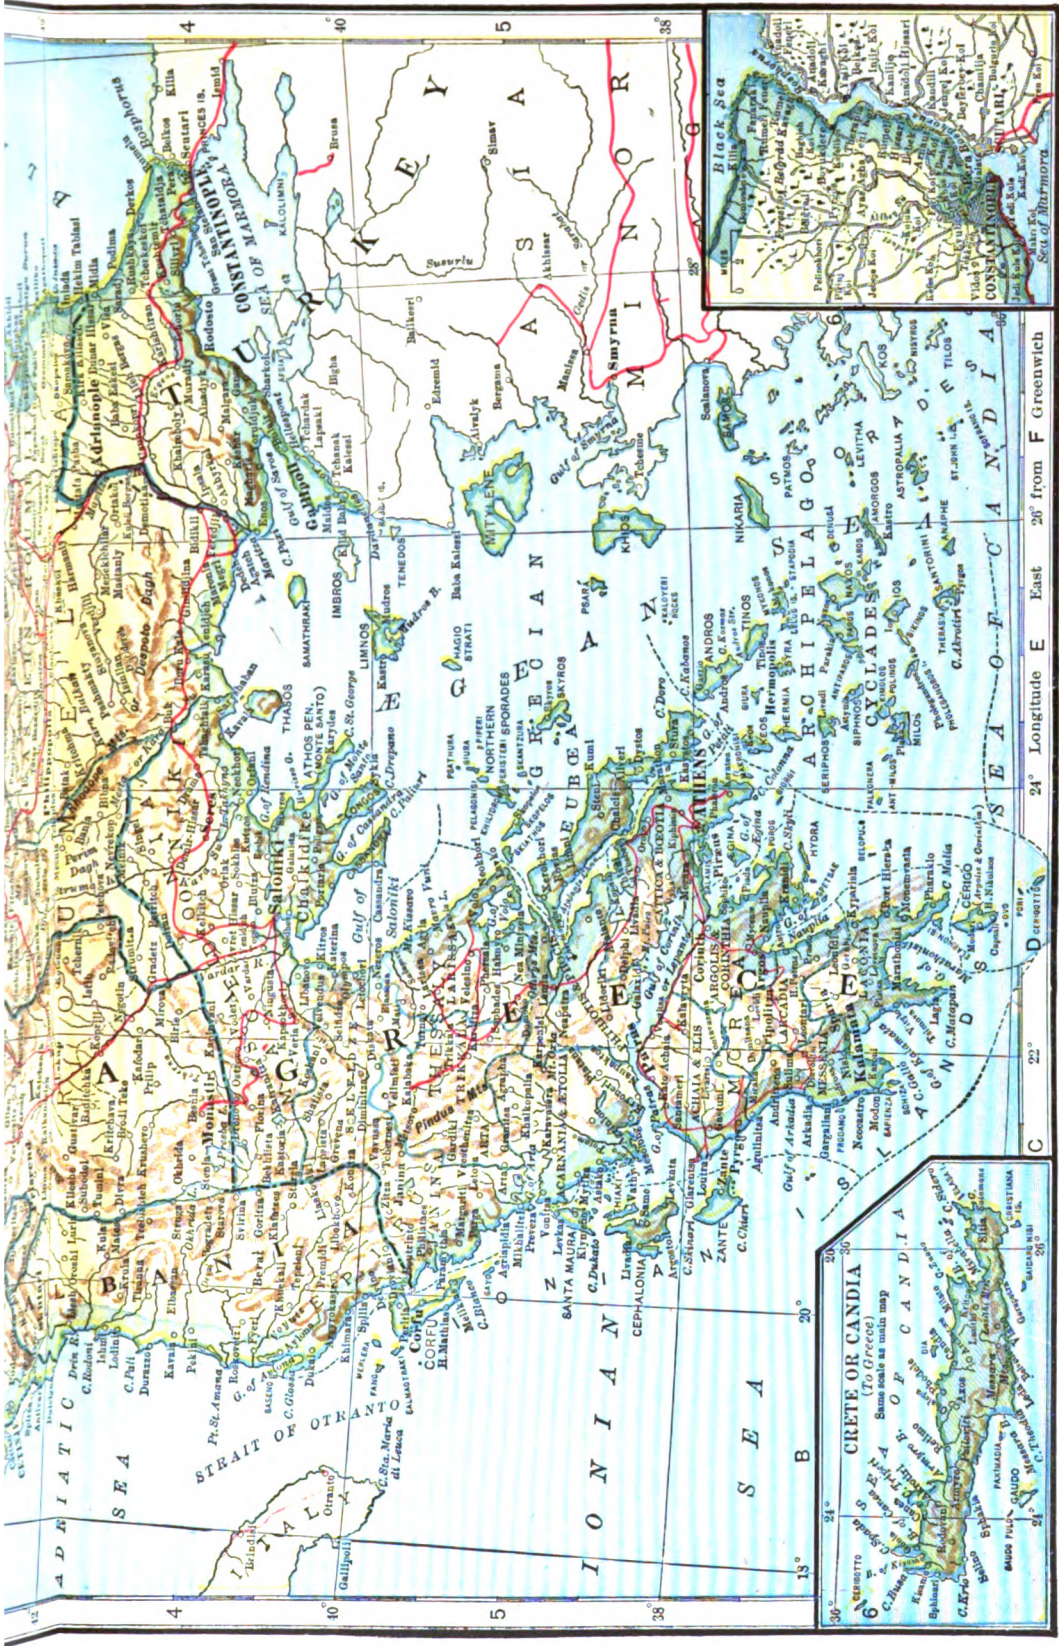

In the European theatres of war, the situation of the Entente Allies appeared most favorable in July and August, when the Anglo-French armies in France were conducting their great offensive on the Somme, when the Germans were abandoning their costly attacks on Verdun, when the Italians were storming the Gorizia fortifications and swarming up the western rim of the Carso plateau, when victorious Russian armies were penetrating ever more deeply into Volhynia and Galicia and threatening to pour through the Carpathian passes into Hungary. These impressive demonstrations of the Entente's military power convinced the Rumanian government, which had long been wavering in its policy of "expectant neutrality," that at length the time had come for intervention (see above, III, *Rumania and Austria-Hungary*). In conjunction with the Russian General Lechitsky's army (see above, section 11), which had occupied the Bukowina and southeastern Galicia, Rumania's forces would cross the Carpathians and march triumphantly into Hungary "to deliver from foreign domination" (in the words of King Ferdinand's proclamation to his people) the long-coveted provinces of Transylvania and the Banat, where dwelt some three million Rumanians under Hungarian rule. "We set forth in the struggle," said King Ferdinand, "with the enthusiasm of a people which has unshakable faith in its destinies."

Rumania's plan of campaign was dictated both by strategic and by political considerations. Strategically, Rumania was in a position either to cooperate with the Russians by invading Transylvania and striking into the Hungarian plain, behind the Carpathian barrier, or to cooperate with General Sarrail's Saloniki army in a joint attack on Bulgaria. The latter plan, if successfully executed, would have the threefold effect of crushing Bulgaria, cutting Turkey off from the Central Powers, and opening a route by which the accumulated surplus of Rumanian and Russian wheat could be freely exchanged for sorely-needed British and American munitions; but in attempting to invade Bulgaria the Rumanians would have to encounter two serious obstacles—the Danube River, which forms the frontier for almost 250 miles, and the Balkan Mountains, which lie south of the Danube; moreover, if Rumania sent the bulk of her small army (only five army corps were immediately available, and the total war strength was less than 600,000) south across the Danube, her northwestern frontier, 470 miles long, could not be adequately defended. If, on the other hand, Rumania merely stood on the defensive against Bulgaria, the Danube's broad stream could be easily guarded, while the main weight of the Rumanian army was flung against Transylvania. This course, in fact, was precisely the one which the Rumanian general staff elected to pursue; not only were the military hazards of a campaign against Transylvania smaller than the risks of a campaign against Bulgaria, but the political desirability of a Transylvanian offensive was infinitely greater. In conquering Transylvania, Rumania would be immediately realizing the cherished dream of "Greater Rumania"; she would be achieving the very object for which she entered the war.

No sooner had the Rumanian declaration of war been dispatched to Austria-Hungary, August 28th (see above, III, *Rumania and Austria-Hungary*), than Rumanian troops opened their attack all along the Hungarian or Transylvanian border. The Hungarian plain, it will be observed, is naturally protected on the north and east by the great curve of the Carpathian range, flanked on the south by the Transylvanian Alps, which sharply bend back westward from the southern extremity of the Carpathian range. In the acute angle between the Carpathians and the Transylvanian Alps, and half surrounded to the east and south by Rumania, lay the mountainous country of Transylvania, once an independent principality, now an integral part of Hungary. On the map, Rumania bears some resemblance to the open jaws of a pair of gigantic pincers—Moldavia forming the upper jaw, Wallachia the lower—with Transylvania caught in between them. It was the purpose of the Rumanian general staff that Transylvania should be crushed by the simultaneous pressure of both jaws. Accordingly, the Rumanians pressed heavily on both the Wallachian and the Moldavian front. From Moldavia, the Rumanians swiftly penetrated the four important passes (Tölgyes, Bekas, Gyimes, and Ojtoz) leading through the Carpathians into eastern Transylvania, and within less than a fortnight they had reached the valley of the upper Maros and the upper Alt (or Aluta), behind the Carpathian ridge, and about 20 miles inside the frontier. The strategic railway which traverses this valley was cut at Olah Toplitz (west of Tölgyes Pass), at Ditro (west of Bekas Pass), at Csik Szereda (west of Gyimes Pass), and at Sepsi Sz. György (south-west of Ojtoz Pass). During the latter half of September the advance from the direction of Moldavia continued; striding across the upper Alt, the Rumanians reached Homorod, Udvarhely, and Parajd, about 50 miles west of the frontier, while their northern flank, supported by the Russians, was brought close to Bistritz. Meanwhile the Rumanian armies on the Wallachian front had been closing in on Transylvania from the south. On their extreme left flank, the Rumanians had passed the "Iron Gates" of the Danube, taken Orsova, and marched northward along the railway to Mehadia. A second column from western Wallachia had made its way through Vulcan and Szurduk passes, captured Petroseny, and pushed northwards to Hatzeq, 25 miles inside the frontier. A third column, further east, had marched up the Oltu valley, through Rothenthurm (Red Tower) Pass, to the important town of Hermannstadt, the occupation of which was affirmed by the Rumanians, and denied by the Austrians. Still further east, Rumanian forces from Törzburger, Tömös, and Bodza passes had overrun the uplands where the Transylvanian Alps meet the Carpathians and had captured Kronstadt (Brasso), about 5 miles inside the frontier and 70 miles east of Hermannstadt. Between Kronstadt and Hermannstadt, the Rumanians captured Fogaras, and ventured northward to within 5 miles of Schässburg, a town almost 50 miles north of the frontier. A line drawn through Mehadia, Hatzeq, Hermannstadt, Schässburg, Udvarhely, Parajd, and Bistritz represents approximately the extreme limit reached by the Rumanian invasion in Septem-

24° Longitude E East 26° from F Greenwich

ber. About one-fourth of Transylvania had been "delivered" from Magyar rule. Almost 7000 prisoners had been taken. But even while the Rumanians, flushed with victory, were still deep in Transylvania, signs were at hand of an impending Teutonic counter-stroke. Germany had sent two of her ablest strategists, Falkenhayn and Mackensen, to the Rumanian front, and had the Rumanian air-scouts ventured far behind the Austrian lines they would have seen, at Temesvar and other Hungarian railway centres, grim howitzers and immense stores of munitions accumulating ominously.

(17) *Hindenburg in Power.*

For the Central Powers, the summer of 1916 was a period of bitter disappointment. The tremendous German effort at Verdun (February-July) had won a few ruined forts and desolated villages, but not victory; after July 1st, when the Anglo-French drive on the Somme began, the Germans seemed unable even to hold their own on the western front; the Austrians, likewise, after attempting an offensive (May) on their western front—against Italy—had been thrown back on the defensive and had been driven out of Gorizia (August); the eastern front, weakened to supply men for the Teutonic offenses against Italy and France, had been battered in by the Russians (June-August); and at the close of August the intervention of Rumania had added 600,000 bayonets to the "ring of steel" surrounding the Central Powers and 900 miles to the front which the Central Powers had to defend. Such were the disastrous results of the strategy pursued during the first half of the year 1916 by Gen. Erich von Falkenhayn, chief of the German general staff (see YEAR BOOK for 1914, p. 765, note). The dismissal of von Falkenhayn August 29th, betokened a radical revision of German strategy. The most brilliant of German field-commanders, Field Marshal Paul von Beneckendorff und von Hindenburg, hero of Tannenberg (see YEAR BOOK for 1914, p. 771), conqueror of Russian Poland (see YEAR BOOK for 1915, pp. 713-715), and commander in chief of the German armies on the Russian front, was chosen to succeed von Falkenhayn as chief of the general staff. Ludendorf, who had formerly been von Hindenburg's chief of staff on the Russian front, now became quartermaster-general and was recognized as "von Hindenburg's right hand man." The effects of von Hindenburg's appointment were soon apparent. The command of the armies on the western front was reorganized, with Field Marshal Duke Albrecht of Württemberg as commander of the northern army group, Crown Prince Rupprecht of Bavaria as commander of the central group (including the region of the Somme), and the Prussian Crown Prince in charge of the Verdun army group. On the Russian front, Prince Leopold of Bavaria and the Austrian Archduke Charles Francis were the titular commanders of army groups, but operations were really directed by trusted German staff officers. At the German headquarters behind the eastern front important conferences were held in September and probably at that time the decision was made to undertake a great offensive against Rumania. Field Marshal von Mackensen, who had coöperated with von Hindenburg in the great Austro-Ger-

man invasion of Russia in 1915, and had subsequently superintended the conquest of Serbia, in October and November, 1915, unexpectedly appeared in the second week of September, 1916, as commander of a composite Bulgar-Turco-Teutonic army attacking Rumania from the south, while von Falkenhayn, about the same time, was mentioned in the official *communiqués* as commander of the Austro-German armies on the Transylvanian front. The plan for the invasion of Rumania, probably conceived by von Hindenburg in September, was successfully executed in the following months; it was one of the most brilliant campaigns of the war (see detailed narrative below); and it earned von Hindenburg a personal letter of congratulation from the German Emperor as well as the enthusiastic plaudits of the German nation. Nor was von Hindenburg content merely to plan campaigns. He intervened in the debate regarding the "unleashing" of the U-boats, and reproved the extremists who advocated ruthless submarine warfare; he induced the Emperor to nominate as war minister General von Stein, who had gained practical experience as an army commander on the western front; and he publicly indorsed, if, indeed, he did not initiate, the plan of industrial conscription, which was adopted by the Reichstag in December, for the purpose of tremendously expanding Germany's output of munitions. With von Hindenburg in power, Germany prepared to match strategy and efficient industrial organization against the Allies' ill-utilized numerical superiority.

(18) *The Collapse of Rumania (September-December).*

When Rumania entered the war, King Constantine of Greece predicted that Rumania's temerity would speedily be punished by a swift and irresistible German drive, and that Rumania would share the tragic fate of Serbia. The Rumanian general staff, however, too confident of an easy victory, gave little heed to Constantine's warning. Relying upon General Sarrail in Macedonia to engage the attention of Bulgaria, and counting upon Russia to prevent the shifting of Austro-German troops from the Russian front, the Rumanian general staff threw all available forces into Transylvania, with little regard for the possibility of counter-attacks. Rumania's rashness was her own undoing.

On September 2nd, six days after the Rumanian declaration of war, three Bulgarian columns (with some Turkish and German units) crossed the border from Northern Bulgaria into Rumanian Dobrudja, on the 100-mile front between the Danube and the Black Sea. The easternmost column, near the coast, captured the fortress of Dobritch (Bazardjik) after a bitter contest, September 3rd-8th, and occupied the seaports of Baltchik (September 8th), Kavarna (September 8th), and Mangalia (September 10th). The central column marched by way of Akkadunlar (September 2nd) and Afatar (September 8th) to the Danube fortress of Silistria (September 9th). The western column stormed the fortified town of Turtukai (Tutrakan) on the Danube, 30 miles west of Silistria, on September 6th, capturing 25,000 men. By September 15th the invaders had reached the line Raso-va-Toprai Sari-Tuzla, about 50 miles north of

the Bulgarian frontier; there they were temporarily held in check by four Rumanian divisions, two Russian divisions, and three Russian cavalry divisions. The fortnight's fighting had brought the Bulgarians to within 10 miles of the very important Constanza-Chernavoda railway, which connects Bucharest with Constanza, the most important seaport of the Dobrudja.

While Field Marshal von Mackensen paused on the Rasova-Tuzla line, General von Falkenhayn, on the Wallachian front, dealt the unwary Rumanian invaders of Transylvania a series of shrewd blows. First at Hatzeg (60 miles west of Hermannstadt), he repulsed a Rumanian column, recaptured Petroseny with its valuable iron mines, and expelled the Rumanians through Vulcan Pass, September 19th-23rd. The following week, the Rumanian first army, advancing north of Rothenthurm Pass, in the direction of Hermannstadt, was suddenly enveloped by German forces, which had secretly marched through the mountains and cut the Rumanian communications at Rothenthurm Pass; in the battle that ensued south of Hermannstadt, September 26th-29th, the Rumanians were completely routed. The Rumanian disaster at Hermannstadt uncovered the left flank of the Rumanian second army, which had been attempting to envelop Schässburg; and compelled the Rumanians hastily to evacuate Kronstadt, October 8th. The Rumanians were trapped in the Transylvanian mountains in almost exactly the same manner as the Italians had been trapped in the Trentino mountains. In confusion, the Rumanian columns in Eastern Transylvania fled toward the Rumanian frontier. By October 16th the Rumanians had been driven back all along the line; Transylvania had been cleared, and the Austro-German armies were battling for the passes on the Rumanian frontier. South of Törzburg and Tömös passes, in fact, the Germans already stood on Rumanian soil.

By this time, von Mackensen had brought up a sufficient number of big guns to break through the Russo-Rumanian lines south of Chernavoda-Constanza railway, at Toprai Sari, Cobadin, and Tuzla, October 19th-21st. Bulgarian cavalry dashed into the city of Constanza, October 22nd, just eight weeks after Rumania's entry into the war. Routed in a desperate struggle at Medjidia, midway between Constanza and Chernavoda, the Russians and Rumanians abandoned the whole line of the railway and evacuated the town of Chernavoda. On the very day that the Bulgars entered Chernavoda, Mr. David Lloyd George informed the British House of Commons, "We and our Allies are working in concert and everything that is possible is being done to help Rumania." Russia sent one of her ablest generals, Vladimir Sakharov, with reinforcements to stiffen the Dobrudja line; but the Constanza-Chernavoda line was irretrievably lost, and the best Sakharov could do was to reorganize the shattered Russo-Rumanian army in the northern Dobrudja. Von Mackensen's advanced guard, which had reached a point 40 or 50 miles north of the Constanza-Chernavoda railway, fell back in November to a position 10 or 12 miles north of the railway.

While military critics were eagerly discussing von Mackensen's victory in the Dobrudja, the main weight of the Austro-German offensive

was concentrated against the opposite front. South of Vulcan Pass, which he had captured on October 25th, General von Falkenhayn suddenly burst through the Rumanian line and swept down the Jiul Valley, in Western Wallachia, overwhelming the Rumanians in a bloody battle, November 15th-17th, at Tirgujiulij (about 20 miles south of Vulcan Pass), reaching the Orsova-Craiova railway, 50 miles south of Vulcan Pass, on November 19th, and capturing Craiova, 75 miles south of the frontier, two days later. By this swift stroke von Falkenhayn won the western third of Wallachia. The Rumanian force operating in the extreme west, finding itself completely cut off from the other Rumanian armies, hastily evacuated Orsova and Turnu-Severin and retired into the mountains near by, but was soon compelled to surrender. With frantic haste the Rumanian general, Averescu, endeavored to marshal his demoralized army behind the Alt (Aluta or Oltau) River, and turned at bay, facing westward, 90 miles west of Bucharest. But the line of the Alt was turned on both flanks. From the north, Austro-German armies advanced through Rothenthurm and Törzburg passes down the slopes of the Transylvanian Alps into the Wallachian plain, behind the Alt. On the south, Field Marshal von Mackensen flung strong forces across the Danube at Islacz (at the mouth of the Alt), at Simnitzer (35 miles further east), and at Giurgevo; by November 25th von Mackensen had reached Alexandria. With both flanks crumpling, the Alt line was no longer tenable, and the Rumanians fell back to their last line of defense, the Arges River, less than 10 miles west of Bucharest. So swiftly, however, did von Falkenhayn's ninth army advance eastward from Craiova that it reached the railway junction of Titu, 90 miles northeast of Craiova and five miles behind the Arges line, about December 3rd, and threatened to envelop Bucharest from the north. Simultaneously von Mackensen, who had assumed supreme control of the Austro-German-Bulgar operations in Wallachia and Dobrudja, crossed the Arges south of Bucharest. With its supposedly invulnerable cincture of 36 armored forts and redoubts, constructed by the famous Belgian engineer, Brialmont, Bucharest was one of the most formidable fortresses in Europe, but the Rumanians made no serious attempt to defend the city against von Mackensen's heavy howitzers. On December 6th—his birthday—von Mackensen entered Bucharest in triumph; his path was strewn with flowers by the Teutonic residents of the Rumanian capital. On the same day, the city of Ploechti (30 miles north of Bucharest) and the whole line of the Bucharest-Kronstadt railway fell into the invader's hand. In the three weeks' campaign, November 15th-December 6th, von Falkenhayn and von Mackensen had routed the Rumanian army, taken about 80,000 prisoners, and conquered the greater part of Wallachia. A violent Russian counter-attack in the Carpathian region failed to stay the Austro-German advance in Rumania, although, according to Austrian reports, the Russians sacrificed 30,000 men in one week. The German Ninth Army drove irresistibly eastward, from Ploechti to Urziceni and Mizil, December 12th—taking 10,000 prisoners in three days—and from Mizil to Buzeu, December 16th. Simultaneously, strong Bulgarian forces crossed the Danube at

Turtukai, Silistria, and Chernavoda, and swept northward to the Jalomitza River, where the Rumanians were again defeated. By the close of December, the Rumanians had been driven out of Wallachia and were standing at bay on a line southwest of Fokshani and Braila, defending Moldavia. In the Dobrudja, the Bulgarians had meanwhile driven Sakharov's Russo-Rumanian army into the extreme northwestern corner, on the narrow tongue of land in the loops of the Danube east of Braila and Galatz.

At the close of the year, it was obvious that the net result of Rumania's intervention had been favorable to the Central Powers. Austro-Hungarian confidence and German prestige, shaken by the failures at Verdun, on the Somme, in Volhynia, in Galicia, in the Bukowina, and on the Isonzo, were restored by the spectacular campaign in Rumania. To be sure, the battle front was approximately 200 miles longer than before Rumania's intervention, but actually fewer men would be required to oppose, or to pursue, the shattered fragments of the Rumanian field army, which had lost at least two-thirds of its effectives, than had previously been required to guard 900 miles of frontier with Rumania's long-delayed intervention an uncertain but no less a real menace. Moreover, a large quantity of Rumanian wheat, which British agents had purchased to prevent its exportation to the Central Powers, was now in the possession of von Mackensen, or rather, of Gen. Tuelff von Tschefe und Woidenbach, who had been appointed military governor of the conquered area.\* The fertile grainfields of Wallachia, scientifically cultivated under the supervision of German experts, might be counted upon to relieve the shortage of bread in Austria and Germany, in case the war should be prolonged over another harvest season. Nor should it be forgotten that in capturing the Rumanian city of Ploechti, in the Prahova Valley, the Germans won the centre of one of Europe's richest oil-fields, although the oil-wells were found in flames and the oil-tanks destroyed. The economic results of von Mackensen's campaign were as important as its strategy was brilliant.

#### (19) *The Situation in Macedonia.*

The collapse of Rumania was in part due to the failure of General Sarrail to exert sufficient pressure on the Macedonian front; Sarrail's inaction enabled the Bulgars to transfer troops and guns from Macedonia to Dobrudja in order to assist in the Austro-German invasion of Rumania. General Sarrail, it will be recalled (see YEAR BOOK for 1915, p. 717), was the French officer entrusted with the command of the Allied armies in Greek Macedonia. Since the ill-fated Anglo-French expeditionary force had been expelled from Serbia in December, 1915, French, British, Serbian, Italian, Russian, and Albanian reinforcements had been landed at Saloniki, so that by the end of August Sarrail had at his disposal a very formidable army of 700,000 men. The Allied forces were flung out on a fan-shaped front in Greek Macedonia north of Saloniki; the left of the Allied army was close to the Serbian frontier in the mountains south of Monastir; the centre was pushed up the Vardar

\* The Dobrudja was placed under Bulgarian administration.

Valley to the border towns of Gievgheli and Doiran, 40 miles north of Saloniki; the right wing rested on the Struma River and Lake Tachyno, but its outposts had been advanced even further to the northeast. No important fighting occurred on the Macedonian front during the first six months of 1916, although in May the Bulgars seized Fort Rupel and several other Greek posts northeast of Saloniki, and in July the Serbs engaged the Bulgars near Florina, south of Monastir. On August 21st, however, the French War Office announced that "on August 20th the Allied forces at Saloniki took the offensive on the entire front." The "offensive" was either a sham or a fiasco. Instead of driving northward into Serbia, Sarrail actually lost ground. His left wing was beaten back from Florina (August 18th), and the Bulgars in this sector occupied Ekshisu Station (on the railway between Florina and Saloniki), Koritza (just across the Albanian frontier, southwest of Monastir), and Kastoria (about 35 miles south of Monastir), August 23rd. At the same time, on Sarrail's right wing the Bulgarian troops seized the railway between Drama, Seres, and Demir-Hissar, August 20th-25th, and occupied the Greek port of Kavala, September 12th. The Greek garrison of Kavala was transported to Germany in quasi-captivity. The months of October, November, and December—so disastrous for Rumania—witnessed no significant operations on either the right wing or in the centre of Sarrail's line; skirmishes, however, were of daily occurrence, and several unimportant villages in the Struma valley were captured, lost, and captured again by British troops. On the right wing, however, the reorganized Serbian army of 120,000 men unrelentingly fought its way, mile by mile, northward toward Monastir. About the middle of September the Serbians recaptured Ekshisu Station, stormed Malka Nidza Ridge between Florina and Lake Ostrovo, and drove the Bulgarians back to the Brod River, just south of the frontier. Russian and French detachments, supporting the left flank of the Serbian army, expelled the Bulgarians from Florina, 18 miles or so south of Monastir, September 18th. While the Franco-Russian column advanced by way of Kenali as if to deliver a frontal attack on Monastir, to the Serbians was assigned the very arduous task of fording the Brod, scaling the lofty summit of Kaimakcalan Mountain, storming Starkov Grob Ridge, fording the Tchernia River, and dragging their mountain-guns across country to the hilltops in the bend of the Tchernia, where they could shell the Bulgarians out of Monastir. Two months elapsed, September 15th-November 15th, while the Serbians, grimly fighting all the way, plodded northward, over bleak hills and across dreary ravines, until they reached the heights in the bend of the Tchernia, east of Monastir. Thereupon the Bulgarians evacuated Monastir and early in the morning of November 19th French cavalry rode into the town. It was exactly four years since Monastir had been captured from Turkey by the Serbs, and almost one year since it had been occupied by the Austrians and Bulgars. A few miles north of Monastir the Allied advance came to a standstill and during the ensuing weeks military critics looked in vain for a serious attempt by Sarrail to relieve the pressure which was crushing Rumania.

In order to protect the exposed left flank of Sarrail's Macedonian army—and possibly for political as well as military reasons—Count Cadorna sent reinforcements to General Piacentini's army at Avlona (see above, IV, 2), with instructions to occupy all southern Albania. Accordingly, Italian detachments took possession of Tepelini, August 30th, Klisura, October 8th, Premedi, October 9th, and Lyaskoviki, close to the Greek border, October 20th. A French *communiqué* on October 25th announced that the cavalry on the left wing of Sarrail's army was in touch with Piacentini's forces. (See also, III, *Relations Between Greece and the Entente*, above; and separate article, GREECE.)

(20) *The French Counter-Stroke at Verdun (October–December).*

While every day was bringing news of stirring events in Transylvania, in the Dobrudja, in Macedonia, or on the Somme, Verdun almost disappeared from the *communiqués*, the struggle on the Heights of the Meuse seemed to have been abandoned. Then, quite unexpectedly, General Nivelle launched a furious attack on the east bank of the Meuse, north of Verdun, broke through the German line on a 4-mile front, to a maximum depth of 2 miles, and by a single stroke recaptured Douaumont village, Douaumont Fort, Thiaumont Farm and Redoubt, and Haudromont quarries. More than 3500 Germans were taken prisoners in a single day. The German War Office, in admitting the reverse, explained that Fort de Douaumont was really evacuated because the benzine stores there had caught fire. General Nivelle followed up his success by recapturing Fort de Vaux—which the Germans evacuated on November 2nd without waiting for the French infantry attack—Damloup village, and Vaux village, November 5th. To offset these further losses, the German War Office announced that German troops had stormed the summit of Hill 304, west of the Meuse, December 6th. France, on the other hand, rewarded Nivelle with promotion to the chief command\* of all the French armies on the Western front, December 11th. The success of Nivelle's sudden stroke at the close of October may possibly be ascribed to the element of surprise, but some other explanation must be sought for the success of the second French counter-stroke at Verdun, December 15th–16th. Several days' artillery preparation advertised the attack. This time, the Germans were not taken unawares. But the December attack, under the direction of General Mangin, was hardly less successful than the October attack, under Nivelle. The German trenches were car-

\* At the beginning of the war the chief command in France had been wielded by General Joffre; his supreme control had been extended also over the French forces in the Near East, Dec. 2, 1915; on Dec. 11, 1916, he was relieved of his duties as commander in chief, and was given a dignified position as technical adviser to the French War Council, formed on Dec. 13 (see FRANCE, *History*); and General Nivelle was made commander in chief of the French armies in France ("northern and northeastern armies"), while General Sarrail remained in charge of the "army of the east," at Saloniki. France had three war ministers in 1916: General Gallieni, "defender of Paris," who had succeeded Millerand in November, 1914, and who resigned in March, 1916, a few weeks before his death; General Roques, from March, 1916, to December; and finally General Lyautey, Dec. 13, "conqueror of Morocco" and military disciple of Gallieni.

ried on a front of 6¼ miles; more than 9000 prisoners were taken; 81 guns were taken or destroyed; and the villages of Vacherauville, Louvemont, and Bezonvaux, together with the field-works of Hardaumont and Bezonvaux, the farm of Chambrettes, and part of Caurières Wood, were captured by French troops. Although the territory regained by these two French counter-strokes represented only a small part of what had been lost between February and July, the significance of the French exploit can hardly be exaggerated. With trifling sacrifice of men, the French had easily regained the most important strategic positions on the east bank of the Meuse—positions which the Crown Prince had captured only after desperate, protracted, and frightfully sanguinary battles. The work of the French artillery in October and December was especially noteworthy; as photographs of Fort de Douaumont demonstrated, the French bombardment was incomparably more effective than the German bombardment of the same place had been in the earlier phase of the struggle. Most important of all, the French counter-stroke indicated the military superiority of the Allies on the Western front; Field Marshal von Hindenburg, it appeared, had determined, for the time being at least, to pursue the inglorious but prudent course of yielding trench after trench in the West in the hope of winning spectacular victories in the East.

(21) *Conquest of Kamerun and German East Africa.*

Inexorably the conquest of the German colonies proceeded, unperturbed by events in Europe. Kiaochow and Kaiser-Wilhelmsland, in the Far East, had been taken by Japanese and British forces in 1914; two of the German African colonies—Togoland and German Southwest Africa—had been taken in 1914 and 1915, respectively; so that at the beginning of the year 1916 only two colonies remained—Kamerun and German East Africa.

In Kamerun the German force, after a stubborn fight in 1914–15, was finally overwhelmed in 1916 by the irresistible convergence of a British column from Nigeria, a Belgian column from Congo, and French columns from Ubangi and from Congo. From the central part of the colony, the Germans fled southward toward the neutral territory of Spanish Guinea, hotly pursued by the invaders, who occupied Yaunde on January 1st and Ebolowa on January 10th. With 900 Germans and 14,000 negro soldiers, General Zimmermann early in February made good his escape into Spanish Guinea, whence he was transferred to Spain for internment. A few days later, February 18th, the last isolated German detachment surrendered, at Mora Hill (in the extreme northern section of Kamerun). The colony was partitioned by France and Great Britain, the greater part being placed under the administration of the French General Aymerich.

To German East Africa the Allies next turned their attention. Despite frequent attacks, little or no headway had yet been made toward the conquest of this, the last and the most important of the German colonies in Africa, stoutly defended by 4000 white and 30,000 negro soldiers. In the spring of 1916, however, British South Africa sent a powerful Boer army under

the command of General Jan Christian Smuts\* to invade German East Africa from the north, using British East Africa as a base of operations. Crossing the border in February, General Smuts fought his way around the forested slopes of the mighty mountain of Kilimanjaro and advanced through almost impassable jungles down the Pangani River valley; by July 10th the entire railway from Tanga, on the coast, to Moshi, near Kilimanjaro, was in his possession. Another British column from the north struck into the very heart of German East Africa, capturing Kondoa-Irangi in June and Kilimatinde in July. Simultaneously a Belgian detachment, under General Tombeur, invaded the colony from the northwest, and reduced the chief German stronghold, Tabora, on September 11th. On the west the Germans were assailed by British columns from Nyasaland and Rhodesia, and on the south by Portuguese troops from Mozambique. Most of the coast towns, including the capital, Dar-es-Salaam (September 3rd), were taken by combined naval and military attacks in September. Before the close of the year the main German forces were driven into the mountainous region south of the great central railway (Dar-es-Salaam to Ujiji), but not entirely annihilated. The major portion of the colony was occupied by the Allies.

#### (22) Estimated Casualties.

Though untrustworthy, the estimates of the casualties suffered by the belligerent nations are not without interest. The *New York Times* estimated the total number of casualties from August, 1914, to January, 1917, at 19,000,000; the number of killed, at about 4,750,000; the daily cost of the war, at \$100,000,000 or more. By counting the names on German casualty lists the British War Office reached the conclusion that the total German losses, in killed, captured, wounded, and slightly wounded, amounted to 4,010,160 for the first 29 months of the war; about one-fourth of the total were killed. France captured 78,500 Germans in 1916. A German report placed the total casualties suffered by France at 3,800,000; by Great Britain, 1,300,000. About the same figures were given by Danish statisticians, December 5th: British casualties, 1,200,000; French, 3,700,000; Russian, 8,500,000; Italian, 800,000; Serbian, 480,000; Belgian, 220,000; Rumanian, 200,000; total for the Entente, over 15,000,000.

#### V. NAVAL OPERATIONS

##### *The Naval Battle of Jutland (May 31).*

This, the first really important naval battle of the war, fought in the North Sea, off Jutland coast, on May 31, 1916, is described in the article NAVAL PROGRESS.

##### *Minor Naval Losses.*

Besides the Lowestoft raid and the Jutland battle, no other naval engagements of importance occurred during the year. Several warships were destroyed by mine, torpedo, or internal explosion. In this way Great Britain lost the

battleship *King Edward VII*, January 9th, by a mine-explosion; the battleship *Russell*, April 27th, by mine-explosion, in the Mediterranean; the cruiser *Hampshire* (with the war minister, Lord Kitchener on board), June 6th; the light cruisers *Nottingham* and *Falmouth*, August 19th; and several destroyers and lesser craft. France lost the cruiser *Amiral Charner*, February 13th; the transport *Provence*, with 3100 men, in the Mediterranean, February 27th; the destroyer *Renaudin*, March 18th; and the battleship *Suffren*, with 700 men, December 8th.

Among the Italian warships destroyed were the transport *Principe Umberto*, June 9th, and the superdreadnought *Leonardo da Vinci* (22,000 tons), with 300 men, on August 2nd. Several Russian transports were sunk in the Black Sea by the Turkish cruisers *Midullu* and *Sultan Selim*, and the big battleship *Imperatrice Maria* (22,500 tons) was destroyed by explosion (?) on October 20th. The Allies reported the sinking of several German destroyers and torpedo boats, a light cruiser of the *Kolberg* class, and a battleship of the *Nassau* class. A German estimate in December placed the total number of Allied warships destroyed during the war at 192, and the tonnage at 744,000; according to another estimate the Allies had lost 115 ships, of 586,705 tons, as compared with the 122 ships, of 387,911 tons, lost by the Central Powers.

##### *Submarines and Commerce-Raiders.*

There were three very potent reasons for Germany's continuance of submarine warfare against Allied merchantmen and neutral contraband-carriers. In the first place, many shipments of munitions were sunk, and many more delayed, by the U-boat campaign. Secondly, the destruction of a very considerable number (almost 1000 in 1916) of Allied merchantmen caused the Allies very serious inconvenience if it did not actually hamper their military operations, because a large part of the Allied merchant marine had been withdrawn from ordinary commerce and devoted to military purposes. The drastic measures taken by France and Great Britain to restrict bulky and unnecessary imports, the seizure of German merchantmen by Portugal and Italy, and the earnest attention given by the great Paris War Council (see above, III) to the problem of the inadequacy of maritime transportation facilities, all testified to the importance of the German submarine campaign. And, in the third place, the jingoistic elements in Germany, incensed by the British blockade, vehemently insisted upon submarine warfare as the only effective means of retaliating for Great Britain's attempt to starve the civil population of Germany. Since by arming their merchantmen the Allies had endeavored to combat the German U-boat menace, the Central Powers announced on February 8th that beginning on March 1st their submarines would be instructed to attack without warning any enemy merchantman mounting cannon. Armed merchantmen would be regarded virtually as belligerent warships. Neutral powers should warn their subjects not to travel on armed merchantmen of belligerent nationality. Among the neutral powers, Sweden complied with the Austro-German request, but the United States, after some hesitation (see article, UNITED STATES AND THE WAR), returned a flat refusal. Nevertheless,

\* General Sir Horace Smith-Dorrien, at first selected to lead the invasion, fell sick and resigned his command to General Smuts.

the Central Powers persisted in their intention, and in March a number of merchantmen were torpedoed without warning. The sinking of the Norwegian liner *Silius* and the Dutch vessels *Tubantia* and *Palembang*, involved Germany in disputes with Norway and the Netherlands. The sinking of the British passenger-vessel *Sussex*, on March 24th, with 50 passengers (including several Americans) resulted in an angry altercation which strained relations between Germany and the United States (q.v.) almost to the breaking point. In deference to President Wilson's insistent demands, the German government on May 4th promised that henceforth no merchantmen would be sunk without warning or without due provision for the security of passengers' lives, except when a merchantman attempted flight or resistance. That this declaration, important as it undoubtedly was, did not mean the cessation of submarine warfare is proved by the list of vessels sunk: January, 12 Allied and 4 neutral merchantmen, with 231 lives lost; February, 16 Allied and 3 neutral merchantmen, with 115 lives lost; March, 21 Allied and 13 neutral merchantmen, with 34 lives lost; April, 70 allied and 26 neutral merchantmen, with 155 lives lost; May, 56 Allied and 4 neutral merchantmen, with 48 lives lost; June, 61 Allied and 7 neutral merchantmen, with no lives lost; July, 50 Allied and 9 neutral; August, 126 Allied and 35 neutral; September, 141 Allied and 39 neutral; October, 146 Allied and 72 neutral; November, 152 Allied and 68 neutral. The British Admiralty, however, asserted that the German pledge was being flagrantly violated; on November 19th a list was published of 22 British ships alleged to have been sunk without warning, and of 107 vessels torpedoed without due provision for the safety of the passengers.

A novel, but not a very feasible, method of nullifying the British blockade was suggested in July by the voyage of the *Deutschland*, a "merchant submarine," unarmed, across the Atlantic from Germany to the United States. Successfully eluding vigilant Allied warships, Capt. Paul Koenig not only made the return trip to Germany in safety, but reappeared in an American port, with a second cargo from Germany, in December. The *Deutschland* was not the only German submarine to brave the perils of the long transatlantic journey. The *U-53*, a German war submarine, entered the harbor of Newport, R. I., on October 7th, delivered a letter for the German ambassador, and torpedoed 3 British, 1 Dutch, and 1 Norwegian steamship just outside the 3-mile limit.

One of the most adventurous exploits of the German navy was the cruise of Count von Dohna, in the commerce-raider *Moeve*. Having slipped through the British blockade, the *Moeve* succeeded in capturing 13 British, 1 French, and 1 Belgian merchantman, and returned to Germany, again evading the British warships by steering an unusual course around the north of Iceland, with 199 prisoners and 1,000,000 marks in gold on board. The *Greif*, attempting to emulate the *Moeve*, was sunk by the British warship *Alcantara*, February 28th.

#### VI. AERIAL WARFARE

Greater attention than ever before was given in 1916 to the "war in the air." Aëroplanes of

improved and powerful types were constructed in great number. Formidable fleets of gigantic aëroplanes, carrying tons of high explosive bombs, ventured on long journeys behind the enemy's battle line to rain destruction on arsenals, railway junctions, and centres of supply. Battle-planes, armed with machine-guns, and sometimes carrying one or more passengers with the pilot, daily engaged in thrilling individual combats, all along the front in France and Belgium, and, less frequently, on other fronts. Thanks to the generous recognition given their deeds by the official *communiqués*, several aviators became more famous than the commanding generals of armies. Lieut. Max Immelmann, one of the most successful German air pilots, was victorious in 15 duels before he met disaster on June 21st. Still greater was the renown of Captain Boelke, another German, whose custom it was to mount to a dizzy height and then, like some monstrous bird of prey, to swoop down upon his enemy. Victor of 40 air battles, Captain Boelke was killed himself on October 28th. Among the Allied aviators, one of the most eminent was the French Lieutenant Gwynemer, who brought down his 25th German aëroplane on December 27th. A British aviator, Lieut. W. L. Robinson, earned the Victoria Cross by winning an unequal combat with one of the giant German Zeppelins, September 3rd. Nor should mention be omitted of the French 2nd Lieutenant Marchal, who, starting at the French frontier, flew clear across Germany, bombarded Berlin with handbills, and never paused until he reached Russian Poland, after an uninterrupted flight of 800 miles (world's record). The interest in the war in the air was not purely romantic. Aëroplanes and airships were indispensable adjuncts of artillery and infantry; airscouts performed invaluable service by directing artillery fire, by observing enemy troop movements, and by photographing the enemy's trenches. While the importance of the aëroplane was enormously enhanced, the work of the Zeppelin was relatively futile. Thirty or more German air-raids on England in 1916 destroyed some property and killed several hundred civilians, but their chief effect was to arouse British public opinion against what seemed to be a policy of wanton slaughter. Thirteen Zeppelins were destroyed in 1916, making the total lost during the war about 50, according to English reports.

Other information bearing on the war will be found in the following articles: AGRICULTURE; BATTLESHIPS AND OTHER WAR VESSELS; CONTABAND OF WAR; FINANCIAL REVIEW; FOOD AND NUTRITION; INTERNATIONAL PEACE AND ARBITRATION; JEWS AND JUDAISM; MILITARY PROGRESS; NAVAL PROGRESS; RED CROSS; RELIEF FOR WAR VICTIMS; SHIPPING; SOCIALISM; SUBMARINES; SURGERY; UNITED STATES AND THE WAR; WOMAN MOVEMENT; WOMEN IN INDUSTRY; in the sections entitled *History*, under ALBANIA, AUSTRIA-HUNGARY, BELGIUM, BULGARIA, FRANCE, GERMANY, GREAT BRITAIN, GREECE, ITALY, RUSSIA, TURKEY. Attention is called especially to the significant cabinet changes in November and December in Great Britain, France, Austria-Hungary, Russia, and Germany, and to the revolt of Arabia against Turkey. See also articles on various industries affected by the war. For books relating to the war, besides those mentioned below, see LITERATURE, ENGLISH AND

AMERICAN; articles on French, German, Italian, Russian, Scandinavian, and Spanish Literatures; also the article PHILOSOPHY.

**WAR RELIEF ORGANIZATIONS.** See RELIEF FOR WAR VICTIMS.

**WARSHIP LOSSES OF BELLIGERENTS.** See NAVAL PROGRESS.

**WARSHIPS.** See BATTLESHIPS; SUBMARINES.

**WASHINGTON. POPULATION.** The estimated population of the State on December 31, 1916, was 1,565,810. The population in 1910 was 1,141,990.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the

United States Department of Agriculture, in 1915-16 were as follows:

		Acreage	Prod. Bu.	Value
Corn	.....1916	38,000	1,406,000	\$1,406,000
	.....1915	39,000	1,058,000	811,000
Wheat	.....1916	1,590,000	37,685,000	58,818,000
	.....1915	2,000,000	51,420,000	42,160,000
Oats	.....1916	275,000	14,300,000	7,298,000
	.....1915	275,000	18,750,000	5,088,000
Potatoes	.....1916	60,000	9,900,000	9,702,000
	.....1915	61,000	8,285,000	4,865,000
Hay	.....1916	886,000	2,006,000	27,688,000
	.....1915	812,000	1,868,000	20,174,000
Rye	.....1916	7,000	102,000	118,000
	.....1915	8,000	146,000	110,000
Barley	.....1916	165,000	6,814,000	5,724,000
	.....1915	175,000	7,268,000	4,067,000

a Tons.

**MANUFACTURES.** The census for manufactures taken in 1914 and completed in as far as the figures relating to the individual States are concerned in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments..	3,674	3,829
Average number of wage earners .....	69,120	67,205
Capital invested .....	\$222,261,000	\$277,715,000
Wages .....	49,766,000	51,708,000
The value of materials used..	117,888,000	136,609,000
The value of products .....	220,746,000	245,326,000

**MINERAL PRODUCTION.** The value of the mined output of gold, silver, lead, copper, and zinc in the State amounted in 1916 to approximately \$2,018,000, compared with \$750,000 in 1915. This is the largest output in the history of the mining of the State. On account of the increase in the prices of the various metals the value of the output was nearly three times that of 1915. The mined production of gold increased from about \$390,000 in 1915 to about \$540,000 in 1916. The silver output increased from 255,837 ounces in 1915 to 315,000 ounces in 1916. Owing to the advance of the average price in silver the value of the output increased from \$129,709 in 1915 to over \$297,000 in 1916. The mined output of copper increased from 1,020,928 pounds in 1915 to about 2,569,000 pounds in 1916. Since the average price was more than \$0.26 a pound in 1916 the value of the copper increased from \$178,662 to over \$701,000. Copper in 1916 was of more importance than gold, which was formerly the principal metal of the State. The mined production of lead increased from 295,215 pounds in 1915 to about 4,937,000 pounds in 1916. The value of the output increased from \$13,875 to about \$336,000. The mined output of zinc increased from 244,906 pounds in 1915 to about 1,709,000 pounds in 1916, an increase of nearly 600 per cent. The value increased from \$33,668 to over \$234,000. The estimated production of coal in the State in 1916 was 2,970,000, an increase compared with 1915 of 541,000 tons or 23 per cent. The increase is due largely to the prosperous condition of lumber and logging companies, manufacturing plants, and railroads and to the increased price of California fuel coal. The supply of labor was sufficient throughout the year and there was no shortage of cars to points in Washington, although cars were not available for shipments to other markets.

**TRANSPORTATION.** The total railway mileage of the State on July 30, 1915, was 8022. This includes mileage of all kinds. Railroads having the longest mileage were the Great Northern, 1196; Oregon and Washington, 992; Chicago, Milwaukee, and St. Paul, 583; and the Northern Pacific, 1955.

**EDUCATION.** The total school population of the State in 1916 was 304,600. The total enrollment was 245,419. The average daily attendance was 191,444. The teachers numbered 9295. See also **UNIVERSITIES AND COLLEGES.**

**FINANCE.** The report of the State Treasurer for the fiscal period 1914-16 shows a balance on Oct. 1, 1914, of \$750,656. The total receipts for the period amounted to \$6,963,403, and the disbursements to \$6,269,548, leaving a balance on hand on Sept. 30, 1916, of \$1,444,510.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the Western State Hospital at Fort Steilacoom, the Eastern State Hospital at Medical Lake, the Northern State Hospital at Sedro-Woolley, Institute for the Feeble-Minded at Medical Lake, State Soldiers' Home at Orting, Soldiers' Colony at Orting, Washington Veterans' Home at Retisville, State School for the Deaf at Vancouver, State School for the Blind at Vancouver, State Penitentiary at Walla Walla, State Training School at Chehalis, State Reformatory at Monroe, and the State School for Girls at Grand Mount. The number of persons in these institutions in 1916 was 5115, and the expenses for maintenance for the years 1915-16 amounted to \$2,146,298. There were expended for new buildings, repairs, etc., \$1,240,169.

**POLITICS AND GOVERNMENT.** One of the surprises of the presidential campaign was furnished by the State of Washington, where a Republican majority counted upon as certain in the early part of the fight was overturned by the supporters of President Wilson. Not only did Washington give its electoral votes to the Democratic candidate but it elected a Democratic Governor. The Republican candidate for United States Senator was elected by the biggest majority ever given a candidate for that office in Washington, while the entire Republican State ticket below Governor was successful. The returns for President, Senator, and Governor follow: President: Hughes, Rep., 166,399; Wilson, Dem., 182,993; Hanly, Prohibition, 6823; Benson, Soc., 22,544; Reimer, Soc. Labor, 700. United States Senator: Poindexter, Rep., 192,287; Turner, Dem., 135,339; W. J. Thompson, Prog., 1441; J. A. Campbell, Prohibition, 4411; Bruce Rogers, Soc., 21,709. Governor: McBride, Rep., 167,802; Lister, Dem., 181,642; J. E. Bradford, Prog., 2894; A. B. L. Gellerman, Prohibition, 3514; L. E. Katterfield, Soc., 21,117; J. E. Riordan, Soc. Labor, 623. No one reason can account for the facts presented by the election returns, save perhaps that the figures prove that the voters of Washington are generally independent. The success of the supporters of President Wilson was due largely to the activities of a group of Progressive leaders who refused to follow Theodore Roosevelt and to the eloquent appeal of the campaign slogan, "He kept us out of war."

When Charles Evans Hughes was nominated it was generally believed that Washington would give the Republican candidate a majority of at least 50,000, but the people seemed to be dis-

appointed in Mr. Hughes's speeches when he came West. Then, too, the regular Republicans did little to win over the radical Progressives. Many of the Progressives espoused the Wilson cause and the peace talk won thousands of Republican women voters.

The success of United States Senator Miles Poindexter is to be ascribed to his progressive tendencies and to his undoubted ability as a campaigner. In the primary election he was pitted against Representative William E. Humphrey, who had served the State in the lower House for 14 years and who was looked upon as a leader of the regular Republican party. He was beaten in the primary by Poindexter by a plurality of 8000 votes.

It was said that Democrats entered the Republican primary and voted for Poindexter, and he drew votes also from Socialists and the independent voters who affiliate regularly with no party. At the general election the regular Republicans had their choice between Poindexter and former Senator George Turner, a Democrat, and while there was some bitterness felt over Humphrey's defeat, the Republicans generally voted for Poindexter. It is likely that thousands of Democrats expressed their preference for Poindexter at the general election and abandoned their own party candidate.

In the gubernatorial race, the fight was between Henry McBride, Republican, and Gov. Ernest Lister, Democrat. Governor Lister had the advantage of being in office and of being the candidate of the drys. Although Mr. McBride came out squarely for prohibition, the dry element preferred to cast their lot with Lister. Lister's election in the face of a majority for the rest of the Republican ticket was as surprising as the Wilson vote.

Washington's representatives in the lower House consist of four Republicans and one Democrat. This is the exact proportion of party strength indicated two years ago. Representative C. C. Dill, Democrat, was reelected while the Republicans are W. H. La Follette, Albert Johnson, John F. Miller, and Lin H. Hadley.

By a vote of six judges to three the Supreme Court of the State in May decided that a capitol bond issue of \$1,500,000 was unconstitutional. This issue was authorized by the Legislature of 1915 for the purpose of paying back into the general fund moneys borrowed by the Capitol Commission and of completing the Temple of Justice. The Legislature guaranteed interest payments on the bonds by providing a tax levy to tide over until the sale of capitol grant lands should cover this expense and repay to the general fund the amounts paid by direct taxation on the capitol bonds. The court held this to be contrary to the constitutional provision, which restricts the imposition of taxes without authorization by vote of the people.

**STATE OFFICERS.** Governor, Ernest Lister; Lieutenant-Governor, Louis F. Hart; Secretary of State, I. M. Howell; Treasurer, Edward Meath; Auditor, C. W. Clausen; Superintendent of Education, Mrs. Josephine Preston; Attorney-General, W. V. Tanner; Adjutant-General, Maurice Thompson; Commissioner of Agriculture, H. T. Graves; Commissioner of Insurance, H. O. Fishback—all Republicans except Governor, Adjutant-General, and Commissioner of Agriculture, who are Democrats.

**JUDICIARY.** Supreme Court: Chief Justice,

George E. Morris; Associate Justices, Frederick Bausman, O. G. Ellis, M. A. Fullerton, W. Mount, O. R. Holcomb, S. J. Chadwick, Emmett N. Parker, and J. F. Main; Clerk, C. S. Reinhart.

STATE LEGISLATURE:

	Senate	House	Joint Ballot
Republicans .....	29	79	108
Democrats .....	6	18	19
Progressives .....	7	5	12
Republican majority..	16	61	77

**WASHINGTON, ALLEN WADSWORTH.** See HAMPTON NORMAL AND AGRICULTURAL INSTITUTE.

**WASHINGTON, BOOKER T.** See LITERATURE, ENGLISH AND AMERICAN, *History, etc.*, American.

**WASHINGTON, UNIVERSITY OF.** A co-educational State institution at Seattle, Wash., founded in 1861. In the fall of 1916 there were 3253 students and in the preceding summer session 1386. For the academic year 1915-16 there were 1059 extension students. The faculty numbered 221. During the year the following benefactions were received: An aëro-dynamic laboratory from W. E. Boeing, of Seattle; an entomological collection from O. B. Johnson, emeritus professor in the university; the Mars fellowship of \$600 per annum, given by the late Dr. Percival Lowell, of Flagstaff Observatory; and a new instructorship in Russian established by Samuel Hill, of Seattle. The university owns property valued at \$5,000,000, which, however, yields an income of only \$55,000, all of this being used for building purposes. From a State millage tax, \$550,000 was derived in 1916. The general library of the university contains 72,000 volumes and receives 500 current magazines. About 6000 volumes a year are being added. The law library contains 10,000 volumes. On March 20 and 21, 1916, took place the inauguration of Dr. Henry Suzzallo, formerly professor of the philosophy of education in Teachers College, Columbia University, as president of the university.

**WASHINGTON AND LEE UNIVERSITY.** A non-sectarian institution for the education of men at Lexington, Va., founded in 1783. In the fall of 1916 the students numbered 520 and the faculty 28. The university had in productive funds \$946,732 and an income of \$113,436. The library contained 50,000 volumes. President, Henry Louis Smith.

**WASHINGTON SQUARE PLAYERS.** See DRAMA.

**WASHINGTON UNIVERSITY.** A non-sectarian co-educational institution in St. Louis, Mo., founded in 1853. In the fall of 1916 the total enrollment of students was 2019, including 646 in Saturday courses for teachers and others, and in evening courses. The faculty numbered 226. In 1916 the university possessed in productive funds \$9,368,277 and had an income of \$618,637. The library contained 161,540 bound volumes and 60,190 pamphlets. In 1916, through gifts from persons and from the General Education Board, \$1,000,000 was available for the Medical School, for departments of medicine and pediatrics. Chancellor, David Franklin Houston (Secretary of Agriculture); acting chancellor, Frederic A. Hall.

**WATER METERS.** See WATER WORKS AND WATER PURIFICATION.

**WATER POWER.** There was little development either in the way of large projects for the utilization of water power or in turbines and regulating machinery in 1916. In the United States the subject bulked large in discussion in Congress and elsewhere, as no grants for water power rights had been conferred since 1912. The conservation interests were able to secure the defeat of various bills in the national legislature and good and bad measures suffered alike. The Ferris bill which passed the House of Representatives failed in the Senate, and the Shields bill from the Senate was rejected by the House. Substitute and other measures were proposed but nothing was accomplished during the year. There were few private enterprises of importance and one reason assigned for this was the increased economy that was being secured by steam plants, which, however, was in large part offset by the ever mounting cost of fuel.

One project, however, was of importance both for its water supply and for its machinery. This was the Yadkin River Development in North Carolina of the Tallahassee Power Co. (See DAMS.) The initial installation included three 31,000 horse power turbines, the largest units ever built of the single-runner Francis type. These machines as well as the entire plant and project were fully described in the *Engineering News* for Nov. 16, 1916, from which the following is abstracted:

The spiral casing for each turbine unit is of circular section and is made of shaped steel plates riveted together and to a cast-steel speed ring delivering the water to the guide vanes and runner.

The casing, of a special patented design, is formed of about two dozen conical sections, each one matching into the other so as to form a continuous smooth passage. The thickness of the plate varies from 3/8 of an inch at the large diameter to 1/16 of an inch at the smallest diameter.

The shaft of the turbine is 24 inches in diameter; that of the generator is about the same. The two shafts are joined by forged flanged couplings between the wheel-guide bearing and generator. The shafts of both waterwheel and generator are hollow, to facilitate inspection of the forging and to permit handling the runner and upper section of the draft tube by means of a cable passing through the centre of the shaft to the hook of the main station crane. The waterwheel and generator are designed as a mechanical unit, so that the lower guide bearing usually furnished with a generator is omitted; the machine, then, is what may be called a "two-guide-bearing unit."

Each of the three units was designed to deliver to the generator shaft not less than 27,000 horse power when operating under an effective head of 165 feet and running at a speed of 154 revolutions per minute. Under these conditions it was to develop an efficiency of not less than 90.5 per cent (efficiency being defined as ratio of water horse power delivered to the unit to mechanical horse power output at the turbine shaft). Each unit also was guaranteed to deliver not less than 31,000 horse power operating under an effective head of 180 feet and at 154 revolutions per minute.

**WATER PURIFICATION.** See **WATER WORKS AND WATER PURIFICATION.**

**WATER RATES.** See **WATER WORKS AND WATER PURIFICATION.**

**WATER WORKS AND WATER PURIFICATION.** Additions to the volume and improvement in the quality of water-supplies, together with general reinforcing of the works and extensions to the distributing mains, proceeded vigorously all over the country. The huge new Catskill supply of hundreds of millions of gallons daily was nearly ready for use and steps were taken to drive a tunnel 18 miles long to add the waters of the Schoharie to those already tributary to the Catskill Aqueduct. (See **AQUEDUCT.**) Preliminary work was under way for a new gravity filtered supply for Providence, R. I. At Cleveland and Milwaukee large and long tunnels were under construction to new lake intakes farther removed from possible contamination. Hundreds of smaller cities were busy with various improvements, including extensions to their meter systems. After several years of committee work, the New England Water-Works Association adopted as a basis for selling water by meters (1) a minimum or readiness-to-serve charge and (2) meter rates of three classes, called domestic, manufacturing, and intermediate. In contrast, St. Louis adopted a sliding scale of meter charges divided into a hundred or more notches, but with a different rate for manufacturers. The latter feature was disapproved by the State Utility Commission. New York and Philadelphia took steps towards extending the use of meters, each city, and notably Philadelphia, being very backward in this respect. New York suffered also from an antiquated schedule of flat water rates for unmetered consumers based on the frontage of building lots. The need for comprehensive water rate revision in New York had been brought home by the fact that when the Catskill supply comes into use the capital charges on the cost would swell the water-works expense account of the city to such an extent as to change the present profits, real or apparent, into an unquestionable deficit.

**WATER PURIFICATION.** Mechanical filtration continues to gain on slow sand filtration, although nearly all the many existing works of the latter type remained in use and were giving good service. The mechanical filters operate at a rate of 100,000,000 gallons or more per acre of filter surface against a rate of 3,000,000 for slow sand filters. This difference was made possible largely by very frequent reverse-flow washing of the sand in the mechanical filters, whereas slow sand filters are generally cleaned by scraping their immense surfaces, washing the sand and replacing it.

At Toronto a 72,000,000-gallon (U. S.) installation of *Drifting Sand Filters*, a modification of the mechanical type, was completed. By means of a constant vertical circulation of water through these filters a considerable part of the sand bed is kept suspended in the water, while some of the sand is constantly being removed, washed in transit, and returned to the top of the filters (see *Engineering News*, Sept. 21, 1916). A 150,000,000-gallon mechanical water filtration and softening plant was completed at Cleveland, Ohio, but could not be put in use owing to settlement defects caused by unstable foundations.

*Alum-Making Plants* to supply the alum or sulphate of alumina commonly used as a coagulant in mechanical filtration, and also used to assist sedimentation before slow sand filtration and where no filtration is employed, were installed during the year at Trenton, N. J., Springfield, Mass., Columbus, Ohio, Omaha, Neb., and at a private company plant that supplies a part of Montreal and vicinity. The Hoover process, an outgrowth of an earlier process used at Columbus, was employed. Bouxite, a natural form of aluminous material, was treated with sulphuric acid and the resulting alum cake or crystallized sulphate of alumina applied to the water to be treated. The bouxite was low priced and no attempt was made to refine the product, as in the manufacture of commercial alum. Considerable saving was effected.

*Water Disinfection* by chlorination became still more common, with liquid chlorine rather than hypochlorite of lime (bleaching powder) as the reagent most generally used. A tiny amount of chlorine is used (less than a grain to a gallon of water). Chlorination is rightly employed as a finishing process after other treatment or as a safeguard pending the installation of filters or before filters are much needed.

**Bibliography.** The chief new publication in this field was A. D. Flinn, R. S. Weston, and C. L. Bogert's *Water-Works Handbook* (New York), a technical reference book. A handsomely illustrated *Final Report on the Construction of the Los Angeles Aqueduct* was published at a moderate price by the city. An unusually complete engineering report on proposed new water works for Sacramento was published by that city.

**WATSON, DAVID THOMPSON.** An American lawyer, died Feb. 24, 1916, at Atlantic City, N. J. Born at Washington, Pa., in 1844, and a graduate at 20 of Washington and Jefferson College, he took his law degree at Harvard in 1866 and two years later established himself in practice in Pittsburgh. In this city he had his home till his death; as senior member of the firm of Watson and Freeman, he was one of the leaders of the local bar. But he gained wider note in government service, as counsel for the United States in the Venezuela and Alaska boundary disputes, and in the "merger" or trust cases, especially the Northern Securities case. Mr. Watson at various times had also been counsel for Senator Matthew S. Quay of Pennsylvania, and for the Standard Oil Company. In 1899 he declined a seat on the bench of the Pennsylvania Supreme Court. The University of Pennsylvania conferred on him the honorary degree of LL.D. in 1905.

**WATSON, JAMES E.** Elected Republican United States Senator from Indiana, Nov. 7, 1916, to fill out the unexpired term (ending 1921) of Senator Shively (q.v.).

**WATTS, MARY S.** See **LITERATURE, ENGLISH AND AMERICAN, Fiction, American.**

**WEBSTER, HENRY KITCHELL.** See **LITERATURE, ENGLISH AND AMERICAN, Fiction, American.**

**WEBSTER, JEAN** (Mrs. Glenn Ford McKinney). An American story writer and drama-

tist, died in New York City June 11, 1916. She was born at Fredonia, N. Y., in 1876, and after attending the Lady Jane Grey School at Binghamton, entered Vassar College, from which she graduated in 1901. Later she lived for some years in Italy, and in 1906-07 made a trip around the world. In 1915 she was married to Mr. McKinney, a New York lawyer. She was a grand-niece of Mark Twain. Among her writings were: *When Patty Went to College* (1903); *The Wheat Princess* (1905); *Jerry Junior* (1907); *The Four-Pools Mystery* (1908); *Much Ado about Peter* (1909); and *Just Patty* (1911). But she was best known for *Daddy Long-Legs* (1912), which was dramatized by her in 1914 and produced with success in New York and elsewhere. The next year appeared *Dear Enemy*.

**WEDEKIND, FRANK.** See GERMAN LITERATURE, *Drama*.

**WEIGHTS AND MEASURES.** In 1916 an unusual number of bills affecting weights and measures in the United States were offered in Congress, but few of these were passed. Nevertheless they showed the general interest in the subject, which was further expressed by activity in many States and local districts. A leading event of the year was the examination and test of gasoline measuring apparatus used for the sale of gasoline to motorists. An extraordinary lack of accuracy and also the presence of intentional short selling were found in some investigations made by the United States Bureau of Standards, and the matter also was taken up by many local departments of weights and measures. This was an almost unworked field in most States. The Bureau of Standards published a valuable bulletin, No. 81, on "Liquid Measuring Pumps," that described the various defects of these machines and the necessary tests to be made and precautions to be observed in their use. The tolerances adopted by the Bureau for gasoline measuring pumps were 1 cubic inch in deficiency and 2 cubic inches in excess, in a standard gallon of 231 cubic inches, or approximately 1 and 2 per cent respectively. The great majority of pumps were not operated within these limits especially prior to the various inspection crusades undertaken, but in many places, as in Philadelphia, where a systematic inspection was undertaken, a great improvement was noted. In 1914 in Philadelphia approximately 93 per cent of the measuring pumps were short at least 3¼ per cent. In the following year only 60 per cent were short to 3 per cent, and in 1916 the record was considerably better.

The standard barrel law which was passed by Congress went into effect on July 1st and practically on October 1st. This established the barrel as a unit of capacity, making a standard barrel for the entire United States, so that under the Constitution any State statutes out of harmony with the new law become null and void. This law applied to fruits, vegetables, and other dry commodities, but not to barrels used in packing or shipping articles sold exclusively by weight or numerical count. The act standardized two barrels, one to be used for general commodities and the other for cranberries. There were established in addition to the standard barrel the three-quarter barrel, the half barrel, and the third barrel.

During the year a bill was passed and signed

by the President on August 23rd providing for a national lime barrel. This established a standard lime barrel and other packages for this commodity by weight exclusively. The act further provided for the use of barrels of proper size and the labeling with correct weights. It was to go into effect on Jan. 1, 1917.

With the recent introduction of measures in Congress for the adoption of the metric system of weights and measures in the United States such as the Dillon bill, there was formed late in the year the American Metric Association with Dr. George F. Kunz president and Howard Richards, Jr., of 156 Fifth Avenue, New York City, secretary. This new organization, which was composed of individual, business, and general associations, planned an active propaganda directed in large part among the commercial and manufacturing interests.

**WEIL'S DISEASE.** See JAUNDICE, HEMORRHAGIC; VACCINE THERAPY.

**WELCH, HERBERT.** See METHODIST EPISCOPAL CHURCH.

**WELFARE WORK.** One of the most striking industrial developments of recent years has been the welfare work undertaken by numerous corporations and other employers throughout the United States and in other industrial nations. Welfare work was defined by Miss E. Dorothea Proud, who was connected with the welfare department of the British ministry of munitions, as "voluntary efforts on the part of employers to improve, within the existing industrial system, the conditions of employment in their own factories." (*Welfare Work*, "Employers' Experiments for Improving Welfare Work in Factories," by E. Dorothea Proud, London, 1916.) The term, however, may be more broadly interpreted to include community efforts to better the health and happiness of its members. As undertaken by employers it includes a great variety of efforts to reduce fatigue and increase efficiency, such as the provision of better light, air, and temperature, the permission of rest periods, in the middle of the forenoon and afternoon, the regulation of speed, noise, monotony, and rhythm, reduction in the length of the working day, provision of proper facilities for warm noon-day lunches, the institution of lockers, baths, and related sanitary facilities, the beautifying of factory yards as well as those of employees, the formation of clubs among employees and their children, the furnishing of gardens for the workers and their children, other recreational advantages, the introduction of individual medical attention, including home nursing, and more or less elaborate schemes for compensation in case of sickness, accidents, unemployment, or old age. In the United States every larger employer has within recent years established a welfare bureau for the promotion of safety, health, sanitation, educational work, charity, recreation, savings, loans, civic improvement, and other welfare relationships. The December issue of the *Monthly Review* of the United States Bureau of Labor Statistics published a list of more than 450 employers who had established some form of disability benefit fund.

**PUBLIC HEALTH.** A survey of City Health Departments of 227 cities of the United States having a population of 25,000 or more was completed by Franz Schneider, Jr., of the Russell Sage Foundation. The investigation was begun

in August, 1913, and was conducted by means of letters and questionnaires to the health officers of the various cities. Two hundred and six cities representing 29,000,000 people answered. These showed aggregate total appropriations of \$13,155,547, or roughly, 44.6 cents per capita for public health services. Seattle showed the largest per capita expenditure of 98 cents, while Clinton, Iowa, with  $\frac{3}{4}$  of 1 per cent had the smallest. These subjects were covered in the questionnaire—appropriation, medical inspection of school children, laboratory service, infant hygiene work, health education and publicity, housing regulation, control of venereal diseases, dispensary service, tuberculosis work, industrial hygiene, and the number of privies. Infant hygiene received the most attention in the New England States. The examination of school children was a feature of public health programmes which was generally recognized as important. Briefly summarized, the survey showed that over a fourth of the cities made no effort to educate in health matters; a fifth had no inspection of school children; nearly three-fourths had no housing law; over a third did not offer the laboratory diagnosis for common communicable diseases; over six-sevenths had no programme for venereal diseases; over one-half had poor organizations for combatting infant mortality; less than one-fourth had a systematic programme against tuberculosis; and nineteen-twentieths were unconcerned about industrial hygiene.

A PERMANENT INDUSTRIAL WELFARE EXHIBITION including displays of more than 30 of the largest firms in the United States, each showing phases of welfare work done in its particular line of business, has been established by the Industrial Welfare Bureau of the Detroit Board of Commerce. The following subjects are covered in the exhibition: safety provisions, sanitation, employment, health, recreation, housing, industrial education, insurance, and representation of employees. The purpose of the exhibit is educational, looking toward the social and economic improvement of employees and the advancement of their efficiency.

MISSOURI. The report of the Missouri Children's Code Commission which will be submitted to the Legislature in January, 1917, developed new and radical standards and methods in its recommendations. For administrative purposes, it recommended the creation of a county board of public welfare in each county composed of five members—the school superintendent, judge of the circuit court, and the three judges of the county court. A trained social worker holding a certificate from the State Board of Charities should be employed by this board as superintendent. The report further advocated that the county health officer be placed under the board of public welfare in order that all health and social work of the county be controlled by one directing head. Two new State agencies were recommended. These were an industrial commission to take over work now done by five or six separate departments dealing with industry, and a State board of medical examiners for licensing medical practitioners.

MUNICIPAL RECREATION. In 1911, Los Angeles established a municipal playground camp by means of which her citizens may enjoy an inexpensive vacation. The camp is now located in the San Bernardino Mountains about 76

miles from Los Angeles, and offers ideal conditions for various camping sports. In 1916, 46 cabins were built, and also an open-air dining room, a building with kitchen, storeroom, and cook's headquarters combined, a bath house, two modern toilet buildings, a concrete plunge, a graded athletic field, and a lodge containing an office, reading rooms, and large entertainment hall. More than 1300 people enjoyed vacations in the camp during the summer. Men and boys are conducted in two groups for outings, and women and girls also go in two groups. The entire expense for food, housing, and transportation is \$7.50 for two weeks or \$5.50 for one week, campers being required to furnish their own bedding, towels, etc.

GREAT BRITAIN. A radical departure from established precedents was taken early in 1916 by the establishment of a welfare department in the British ministry of munitions. Its object was to enforce a general responsibility for maintenance of higher standards for the employment of women and girls in munition factories. Mr. B. Seeborn Rowntree, a well-known manufacturer, was appointed director. An act of Parliament August 3rd conferred extensive powers upon the home secretary to secure the welfare of workers in factories and work shops, authority being given to issue mandatory orders regulating arrangements for preparing meals, the supply of drinking water and protective clothing, ambulance and first-aid provisions, the supply and use of seats in workrooms, facilities for washing, accommodation for clothing, and the supervision of workers. These enactments were the result of the growing opinion that not only is welfare work a necessity in the interest of the health and vigor of the working population, but that it is a decided advantage to the employer because it creates a spirit of enthusiastic coöperation on the part of the working force.

WELLAND CANAL. See CANALS.

WELLESLEY COLLEGE. A non-sectarian institution for the education of women at Wellesley, Mass. It was founded in 1875. In all departments in the fall of 1916 there were 1570 students. The faculty numbered 137. During the year Prof. Sarah Frances Whiting, professor of astronomy and director of Whitin Observatory, retired under the Carnegie Endowment, and Dr. John Charles Duncan was appointed to take her place. Important progress was made in the rebuilding necessitated by the disastrous fire of 1914, and in increasing the endowment of the college. From the Rockefeller Foundation \$750,000 was received, from the General Education Board \$200,000, from Andrew Carnegie \$95,000, from an unnamed donor \$415,000 (for a Hall of Residence), and also from unnamed donors two gifts of \$100,000 each. These were all contributions to the Restoration and Endowment Fund. From a former student \$150,000 was received for a new administration building. At the end of the year, Clafin Hall, a new dormitory built in memory of ex-Governor and Mrs. Clafin, was nearly ready for occupancy. This is the third new building to be erected since the burning of College Hall. It will house 100 students. The productive funds of Wellesley College amounted in 1916 to \$2,600,515, yielding an income of \$155,189. Further income, from tuition and other sources, amounted to \$316,280. The library contains

86,722 volumes. President, Ellen Fitz Pendleton. See also UNIVERSITIES AND COLLEGES.

**WELLS, H. G.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction and Essays*, English.

**WESLEYAN METHODIST CONNECTION IN AMERICA.** This denomination, starting in Michigan in 1841 under the name of Wesleyan Methodists, was organized in 1843 at Utica, N. Y., as an anti-slavery and non-episcopal church, and took the name of The Wesleyan Methodist Connection of America. It had at its beginning about 6000 members, and excluded from its membership all persons who were connected with slavery, or with the manufacture or sale of intoxicating drinks, and all who belonged to secret societies. After the close of the Civil War many who had joined the new church, seeing that slavery was abolished, returned to the churches to which they had originally belonged or joined other churches. The denomination emphasizes the Wesleyan doctrines of justification and holiness as essential to salvation. According to the official revised returns of 1915 there are 840 ministers, 675 churches, and 20,669 members. There are foreign missions in Sierra Leone, Africa, and in India. The work of the denomination made considerable progress in 1916, notably along educational lines. A fine new college building was erected at Central, S. C. There are three schools of college grade: at Houghton, N. Y.; Central, S. C.; Miltonvale College, Miltonvale, Kan.; Theological School, Fairmount, Ind. Officers: E. Teter, president of the general conference and missionary secretary; J. S. Willett, agent and treasurer; F. A. Butterfield, editor. The publication house is at Syracuse, N. Y.

**WESLEYAN UNIVERSITY.** A non-sectarian institution for the education of men at Middletown, Conn. It was founded in 1831. In the fall of 1916 the total enrollment of students was 504 and the faculty numbered 55. During the year six additional instructors were appointed. From Mrs. Gardiner Hall, Jr., of South Willington, Conn., \$150,000 was received to construct a new chemical laboratory in memory of her husband. Mr. Ralph H. Ensign of Simsbury, Conn., and his son, Joseph R. Ensign, gave \$30,000 to remodel the university chapel, and a new organ was provided for by a gift of \$10,000 from Mr. John Gribbel of Philadelphia. In 1916 the productive funds of the institution amounted to \$2,457,147, and the income to \$184,917. The library contained 106,000 volumes. During the year the university lost by death its president emeritus, Dr. Bradford P. Raymond (q.v.). President, William Arnold Shanklin. See also ASTRONOMY.

**WESTERN AUSTRALIA.** A state of the Commonwealth of Australia, occupying the western part of the continent west of the Northern Territory and South Australia. It is the largest of the Australian states, the area being 975,920 square miles, which is about 32.8 per cent of the area of the Commonwealth. The population according to the census of 1911 was 282,114 (161,565 males, 120,549 females), exclusive of full-blooded aboriginals. The increase per cent in the decade 1901-11 was 53.22, in 1891-1901 269.86, in 1881-91 67.57. At the end of 1915 the population was estimated at 319,859 (173,309 males, 146,550 females). The capital is Perth, which at the 1911 census had 35,767 inhabitants; including suburbs, 106,792.

The executive authority rests with a governor, who is appointed by the crown and is assisted by a responsible ministry. The Parliament consists of two chambers, the Legislative Council (30 members) and the Legislative Assembly (50 members); members of the Council are elected for six years, and those of the Assembly for the duration of Parliament, which is limited to three years. The franchise was granted to women by an act of 1899. The governor in 1916 (from March, 1915) was Maj.-Gen. Sir Harry Barron, K.C.M.G.; premier, treasurer, and minister for railways, John Scaddan. See AUSTRALIA.

**WESTERN RESERVE UNIVERSITY.** A non-sectarian institution at Cleveland, Ohio. It was founded in 1826 as Adelbert College. The university now comprises this college (for men), a college for women, and professional departments. In the autumn of 1916 there were 2210 students enrolled and the faculty numbered 282. The university received in benefactions \$500,000. There were 120,000 volumes in the library. President, Charles Franklin Thwing.

**WEST POINT.** See UNITED STATES MILITARY ACADEMY.

**WEST VIRGINIA. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 1,399,320. The population in 1910 was 1,221,119.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16 were as follows:

		Acreage	Prod. Bu.	Value
Corn	.....1916	725,000	22,112,000	\$22,388,000
	.....1915	800,000	25,200,000	18,648,000
Wheat	.....1916	320,000	4,640,000	7,424,000
	.....1915	300,000	4,500,000	4,860,000
Oats	.....1916	140,000	3,220,000	2,061,000
	.....1915	120,000	3,480,000	1,775,000
Potatoes	.....1916	48,000	4,224,000	6,674,000
	.....1915	50,000	5,850,000	8,802,000
Hay	.....1916	825,000 <sup>a</sup>	1,270,000	18,415,000
	.....1915	780,000	1,095,000	16,425,000
Tobacco	.....1916	14,100 <sup>b</sup>	12,690,000	1,904,000
	.....1915	11,800	9,881,000	983,000
Rye	.....1916	20,000	320,000	381,000
	.....1915	16,000	224,000	208,000

<sup>a</sup> Tons. <sup>b</sup> Pounds.

**MANUFACTURES.** The census for manufactures, taken in 1914 and completed in as far as the figures relating to the individual States are concerned in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments..	2,586	2,749
Average number of wage earners .....	63,898	71,078
Capital invested .....	\$150,922,000	\$175,995,000
Wages .....	88,000,000	48,784,000
The value of materials used.	92,878,000	110,038,000
The value of products .....	161,949,000	198,512,000

**MINERAL PRODUCTION.** The estimated production of the coal of the State amounted in 1916 to 91,000,000 net tons, an increase compared with 1915 of 13,816,000, or nearly 18 per cent. Practically every district in the State shared in the increase. The car supply was adequate in the first half of the year, but was generally

short in the last quarter. There was a shortage of labor in practically all parts of the State.

The year 1915 was a notable one in the coal production in the State. The output was the greatest on record, amounting to 77,184,069 short tons, valued at \$74,561,349, an increase of nearly 8 per cent in quantity and more than 4 per cent in value over the production of 1914. The greatest increases were in the New River and Pocahontas field. During the early part of the year the coal industry in the greater part of the State was depressed, but later revived. There was a shortage of labor, and the number of men employed decreased from 78,963 in 1914 to 75,882 in 1915.

The production of petroleum in the State in 1915 was 9,264,798 barrels compared with 9,680,033 barrels in 1914. The State continued to hold sixth place as an oil producing State.

**TRANSPORTATION.** The railway mileage of the State in 1916 was 3740. The railroads having the longest mileage were the Baltimore and Ohio, 1127; Norfolk and Western, 452; Western Maryland Railroad Company, 198; and the Virginian Railway Company, 119.

**EDUCATION.** The total school population of the State in 1916 was 419,890. The total enrollment was 313,873. The average daily attendance was 223,889. There were 4482 male and 5842 female teachers. The average yearly salary of teachers was \$332.41.

**FINANCE.** The report of the State Treasurer for the fiscal year ending June 30, 1916, shows a deficit on June 30, 1915, of \$226,151. The receipts for the year amounted to \$4,192,696, and the disbursements to \$3,800,484, leaving a balance on June 30, 1916, of \$392,212.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include the Western State Hospital, Spencer State Hospital, Huntington State Hospital, State Tuberculosis Sanatorium, Welch State Hospital, No. 1, McKendree Hospital, No. 2, the Fairmont Hospital, No. 3, the West Virginia Penitentiary, West Virginia Industrial School for Boys, West Virginia Industrial Home for Girls, West Virginia School for the Deaf and Blind, West Virginia Colored Orphans' Home, and the West Virginia Children's Home.

**POLITICS AND GOVERNMENT.** West Virginia in the 1916 election for the first time in two decades chose a Democrat, John C. Cornwell, as its Governor, unseated United States Senator William E. Chilton, a Democrat, and elected as his successor Howard Sutherland, Republican Congressman-at-large. The voters of the "Little Mountain State" sent four Republicans and but two Democrats to Congress. They elected all Republicans for State offices, below that of Governor, and elected a Legislature which is divided against itself. The Senate stands Republican by a majority of 10 and the House has a Democratic majority of 10.

Charles E. Hughes received West Virginia's eight electoral votes, the approximate vote being Hughes 141,432; Wilson, 139,013. Until President Wilson's reelection had been admitted recounts were demanded by the Democratic national committee, throughout the State, but were withdrawn. Likewise Senator Chilton demanded recounts in several counties, but seeing the overwhelming Sutherland majority increasing, withdrew his demands.

In the first Congressional district Congressman M. M. Neely (D.) defeated Thomas W. Fleming (R.) and was reelected. Fleming at first contested, but later withdrew. Both reside in Marion County and Congressman Neely carried every precinct in the county, including his opponent's home precinct. In the second district George Bowers (R.), who succeeded the late Congressman Junior Brown, was reelected by a handsome majority. In the third district Secretary of State Stuart F. Reed (R.) was chosen Congressman. The fourth district reelected Congressman Harry Woodyard; while the fifth and sixth reelected Edward Cooper (R.) and Adam Littlepage (D.), respectively. In its platform the Democratic State committee attacked the personality and administration of the Republican Governor, Henry Drury Hatfield. The Republican convention adopted a platform endorsing Governor Hatfield and the administration. Each party adopted a plank endorsing equal suffrage. The personal unpopularity of the Governor, his arrogant conduct towards the opposition, and various features of the administration were the base of the Democratic campaign, and with this attack they defeated Ira E. Robinson, who retired from the State Supreme Court bench and was made the Republican gubernatorial nominee. Contests in various counties have held up the official certification of the result. These, however, have been withdrawn. Cornwell is elected by a probable majority of 2500 votes.

Houston Young, chief clerk in the office of the Secretary of State, was elected to succeed his chief. William F. Johnson, known as "Pistol Bill," because he framed West Virginia's anti-pistol toting law, was chosen State treasurer. Edward T. England, a member of the State Senate, was elected attorney-general. Judge William N. Miller was reelected to the State Supreme Court and with him was elected Judge Harold Ritz. James H. Stewart was elected State commissioner of agriculture. State Superintendent of Schools Morris P. Shawkey was reelected for the third term.

Failure of the Republican party to elect its gubernatorial candidate was due to factional differences within the party, the outgrowth of the primary, at which Attorney-General A. A. Lilly was defeated for the nomination by Judge Robinson.

Immediately after the election Governor Hatfield called a special session of the Legislature. It was rumored that this session would take away the next Governor's appointive powers, but the proposed bill was never presented. In his call Governor Hatfield pointed out that the special session was of necessity called to block efforts of the Democratic party to have their successful candidate for Governor unseat all Republicans elected to State office. Governor-elect Cornwell denied the existence of such a plot, but the Legislature passed measures taking away any powers which might jeopardize the positions of the officers chosen by the people. It did not, however, take away the Governor's appointive powers. Before adjourning the Legislature amended the State election law, so that in the future no man can vote who has not registered at least two days before the election.

On August 9th a cloudburst near Charleston caused streams to overflow in Cabin Creek Valley, destroying many villages in the mining dis-

trict, and property damage amounting to \$2,000,000 and a loss of more than 50 lives.

**STATE OFFICERS.** Governor, John J. Cornwell; Secretary of State, Houston Goff Young; Superintendent of Education, M. P. Shawkey; Auditor, John S. Darst; Commissioner of Agriculture, James H. Stewart; Attorney-General, E. T. England; Treasurer, William S. Johnson; Adjutant-General, John C. Bond; Commissioner of Insurance, J. S. Darst, ex-officio—all Republicans, except Governor, Democrat.

**JUDICIARY.** Supreme Court of Appeals: President, L. Judson Williams; Associate Judges, George Poffenbarger, William N. Miller, Charles W. Lynch, Harold A. Ritz; Clerk, W. B. Matthews.

STATE LEGISLATURE:

	<i>Senats</i>	<i>House</i>	<i>Joint Ballot</i>
Republicans .....	20	42	62
Democrats .....	10	52	62
Majority .....	10R	10D	—

**WEST VIRGINIA UNIVERSITY.** A co-educational State institution at Morgantown, W. Va. It was founded in 1867. The total enrollment in the fall of 1916 was 1096. There were 108 members in the faculty. The productive funds of the institution amounted to \$115,104. From all sources an income of \$546,914 was obtained. There were 45,000 volumes in the library. Acting president, Frank Butler Trotter.

**WHARTON, EDITH.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*, American.

**WHEAT.** The world's wheat production in 1916 was much below the record yield of the preceding year. The crop in the northern hemisphere as estimated by the International Institute of Agriculture, Rome, was 3,221,181,000 bushels or only about 80 per cent of the production of 1915, decidedly inferior to that of the four preceding years, and even 5.1 per cent under the average of the five years 1909-13. The above estimate is based to the extent of 69.1 per cent on data actually furnished and of 30.9 per cent on the average of the five years preceding the European war, taken as the yield in 1916, for countries not giving out crop information at this time. A number of countries for which no recent data are available, including China, Greece, Mexico, Persia, Portugal, Serbia, and Turkey in Europe and in Asia, whose aggregate yield is roughly estimated at about 245,000,000 bushels, are not considered in this connection. The harvest of the southern hemisphere, of 1915-16 amounted to 353,652,210 bushels, which was a record yield, but the crop of 1916-17, notably in Argentina, suffered considerable injury from drouth and the depredations of locusts. The requirements of the northern hemisphere for the commercial season, Aug. 1, 1916, to July 31, 1917, are placed at 3,679,321,800 bushels and the available supply, including 509,197,820 bushels left over from the preceding crop in the northern hemisphere and 97,248,410 bushels in the southern hemisphere, is estimated at 3,827,627,000 bushels, leaving a surplus of almost 158,000,000 bushels. The quantity used in both hemispheres for seed, based on data for the five years 1909-10 to 1913-14 and included in the above requirements, is given as 412,188,710 bushels. Owing to war conditions ocean freight rates reached a high figure during the

year and also fluctuated to a considerable extent. In February, 1916, the rates per bushel to Liverpool from New York were 47.9 cents, from Portland 50.6 cents, and from Buenos Aires 89 cents, as compared with 3.8, 21.1, and 5.2 cents respectively in February, 1914. The average price of wheat in New York for the six months April to September, 1916, was \$1.419 and in Liverpool \$1.773.

The total wheat production of the United States in 1916 as estimated by the Department of Agriculture was 639,886,000 bushels, produced on 52,785,000 acres at the rate of 12.1 bushels per acre. As compared with 1915 the production was smaller by 385,915,000 bushels, the acreage by 7,684,000 acres, and the average yield per acre by 4.9 bushels. The average farm value on Dec. 1, 1916, was \$1.603 per bushel, and the value of the total crop on this basis \$1,025,765,000. The price level was the highest since the close of the Civil War, and the total value of the crop the highest ever recorded, even exceeding that of the record production of 1915 by \$83,462,000. The leading States and their yields were as follows: Kansas, 98,022,000, Nebraska 68,550,000, North Dakota 39,325,000, Washington 37,635,000, Oklahoma 29,585,000, Montana 28,655,000, Minnesota 27,555,000, and Pennsylvania 26,125,000 bushels. Kansas ranked first in acreage with 8,174,000 acres and North Dakota second with 7,150,000. The winter wheat production of the country amounted to 481,744,000 bushels on 34,829,000 acres, the average acre yield being 13.8 bushels. The corresponding figures for 1915 were 673,947,000 bushels, 41,308,000 acres, and 16.3 bushels respectively. The leading winter wheat States and their production were as follows: Kansas 97,500,000, Nebraska 64,800,000, Oklahoma 29,585,000, Pennsylvania 26,125,000, and Ohio 20,250,000 bushels. The spring wheat production was only 158,142,000 bushels on 17,956,000 acres, at the very low rate of 8.8 bushels per acre, due to weather conditions and attacks of black rust in the three principal spring wheat States. In 1915 the production was larger by 193,712,000 bushels, the acreage by 1,205,000 acres, and the yield per acre by 9.6 bushels. The leading States and their yields were as follows: North Dakota 39,325,000, Minnesota 26,645,000, South Dakota 22,050,000, and Washington 19,350,000 bushels. The annual production of durum wheat is estimated at about 50,000,000 bushels, which is produced mainly in the Dakotas. The farm value of durum wheat was about 7 cents per bushel less than that of other spring wheats, but the yield was enough larger to make the value per acre higher than that of the other class. The wheat production of the United States in 1916 gave a per capita supply of 6 bushels as compared with 10 bushels in 1915, 9 in 1914, nearly 8 in 1913, and 7.65 bushels in 1912. Allowing for the wheat exported and carried over to the following year the actual per capita consumption was 6.55 bushels in 1915, 5.89 in 1914, and between 6 and 6.50 bushels in the preceding 10 years. A large surplus carried over from 1915 helps to meet the 1916 deficiency. The wheat crop of Canada was about 30 per cent below the normal production as the result of frost and rust.

**WHEELER, EVERETT P.** See LITERATURE, ENGLISH AND AMERICAN, *History, etc.*, American.

**WHIPPLE, LEANDER EDMUND.** An American editor and author, died at Greenwich, Conn., May 25, 1916. He was born in 1843. He early became interested in mental healing, and in 1895 founded the *Metaphysical Magazine*, which he edited for 21 years. He taught a system of metaphysics by correspondence. His publications include: *Absent Treatment in Metaphysical Healing* (1891); *The Philosophy of Mental Healing* (1896); *Universal Intelligence* (1896); *Mental Healing* (1905); *A Manual of Mental Science* (1911); *True and False Conceptions of Mental Science* (1911); *Practical Health* (1914).

**WHISKEY.** See LIQUORS.

**WHITE, HORACE.** An American editor and financial expert, died in New York City, Sept. 16, 1916. He was born in Colebrook, N. H., in 1834, but spent his boyhood and youth at Beloit, Wis. After graduating from Beloit College in 1853, he was successively city editor of the *Chicago Evening Journal*, correspondent of the Associated Press, and assistant secretary of the National Kansas Committee. For the *Chicago Tribune* he accompanied Abraham Lincoln on his campaign against Stephen A. Douglas in 1858 (for his impressions consult Herndon and Weik's *Life of Lincoln*). During the presidential campaign Mr. White held the chairmanship of the Illinois State Republican Committee and in 1861 he went to Washington for the *Tribune*. In 1864, with Henry Villard and Adams S. Hill, he formed a syndicate of papers to receive news from the war front, himself directing the Washington bureau of this service. From 1865 to 1874 he was editor-in-chief of the *Chicago Tribune* and afterward for several years was treasurer of the Oregon Railway and Navigation Company, with headquarters in New York. When Henry Villard founded the *New York Evening Post* in 1881 he was joined by Carl Schurz, Edwin L. Godkin, and Horace White, who, after about a year became head of the company. From 1899 to 1903 he was Godkin's successor as editor-in-chief, retiring as editor emeritus. Mr. White combatted vigorously and effectively the greenback and free silver movements. He wrote a standard text-book on *Money and Banking* (1895; 5th ed., 1914) and a *Life of Lyman Trumbull* (1913), translated from the Greek Appian's *Roman History*, and edited French and Italian works on finance. In 1908 Governor Hughes appointed him chairman of the Wall Street Investigating Commission. Consult the *New York Evening Post*, Sept. 18 and 21, 1916.

**WHITE, J(AMES) WILLIAM.** An American surgeon, died in Philadelphia April 24, 1916. He was born in Philadelphia in 1850, and took the degrees of M.D. and Ph.D. at the University of Pennsylvania when only 21. During the two following years he accompanied Prof. Louis Agassiz on the Hassler Expedition around South America, returning to practice medicine in his native city. Dr. White was long connected with the University of Pennsylvania, successively holding several chairs, and retiring finally as John Rhea Barton professor of surgery. He retained an emeritus professorship and the office of trustee of the university. In addition he was surgeon to several Philadelphia hospitals, and to the Pennsylvania Railroad, and for a decade surgeon of the First Troop of Philadelphia City Cavalry. Greatly interested in intercollegiate

athletics, he served his alma mater as its first professor of physical education and as president of the Athletic Association. In 1915 he visited France, where he was identified with the American Ambulance Hospital at Neuilly. Dr. White published, with other eminent surgeons, medical works of high importance. In 1906 the University of Aberdeen honored him with the degree of LL.D. The bulk of his estate, about \$400,000, was left to the University of Pennsylvania; of this, \$150,000 was to be used to establish the J. William White chair of surgical research.

**WHITE, JOHN BARBER.** See SHIPPING BOARD, UNITED STATES.

**WHITE, J. CAMPBELL.** An American clergyman and educator, installed as president of the College of Wooster (Ohio), Oct. 12, 1916.

**WHITE, STEWART EDWARD.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*, American.

**WHITE, WILLIAM ALLEN.** See LITERATURE, ENGLISH AND AMERICAN, *Fiction*, American.

**WHITE SLAVERY.** See PROSTITUTION.

**WHITMAN, CHARLES S.** Re-elected Republican Governor of New York, Nov. 7, 1916. See NEW YORK.

**WHITNEY, WILLIS R.** See CHEMISTRY, INDUSTRIAL, *Medals*.

**WHITTEMORE, DON JUAN.** An American railway engineer, died at Milwaukee, Wis., July 17, 1916. He was born at Milton, Vt., in 1830, and received his education at Bakersfield Academy. At 17 he became an engineer on the Vermont Central Railroad, and thereafter he was connected with various roads, but principally with the Chicago, Milwaukee, and St. Paul, until his retirement as its consulting engineer in 1910. He had then been chief engineer of this road since 1863. The University of Vermont and the University of Wisconsin gave him honorary degrees, and in 1884-85 he served as president of the American Society of Civil Engineers.

**WIDOWS' PENSIONS.** See PENSIONS FOR MOTHERS.

**WIDTSON, JOHN ANDREAS.** An American educator, chosen in 1916 president of the University of Utah. Since 1907 he had been president of the Agricultural College of Utah.

**WILBERFORCE, (ALBERT) BASIL (ORME).** An Anglican clergyman, died in London May 13, 1916. The son of Samuel Wilberforce, who was Bishop of Oxford and later of Winchester, he was born in 1841 in Winchester, his father being then canon. Basil Wilberforce studied at Eton and at Exeter College, Oxford, where he received the degree of D.D. In 1868 he became chaplain to his father, at Oxford, then he held several curacies, was rector of St. Mary's, Southampton, and from 1894 to 1900 served as canon of Westminster, being also rector of St. John's, and, from 1896, chaplain of the House of Commons. In 1900 he received the appointment of Archdeacon of Westminster. Archdeacon Wilberforce gained a remarkable reputation as a preacher. He was the author of various religious works, several volumes being collections of sermons preached in Westminster Abbey. These are entitled: *Sermons Preached in Westminster Abbey* (1898); *Feeling After Him* (1902); and *Sanctification by the Truth* (1906).

**WILBUB, RAY LYMAN.** An American educator, installed Jan. 22, 1916, as president of Leland Stanford Junior University, succeeding Dr. John Casper Branner, who retired as president

emeritus. Dr. Wilbur had been since 1909 professor of medicine in the university and since 1911 dean of the Medical School. In 1912-13 he served as president of the American Academy of Medicine.

**WILDENBUCH, ERNST VON.** See GERMAN LITERATURE, *New Editions*.

**WILLARD GIBBS MEDAL.** See CHEMISTRY, INDUSTRIAL, *Medals*.

**WILCOX, WILLIAM RUSSELL.** See UNITED STATES, *Presidential Campaign*.

**WILLIAM II.** See UNITED STATES AND THE WAR; WAR OF THE NATIONS.

**WILLIAM, CROWN PRINCE.** See WAR OF THE NATIONS.

**WILLIAMS, JOHN SHARP.** Relected Democratic United States Senator from Mississippi, Nov. 7, 1916.

**WILLIAMS COLLEGE.** A non-sectarian institution for the education of men at Williamstown, Mass. It was founded in 1793. In the fall of 1916 there were 5522 students, all but three of whom were undergraduates. The faculty numbered 54. During the year Dr. Samuel Fessenden Clarke, professor of natural history, retired. For the endowment of the college \$389,775 was received. The total productive funds amounted to \$2,152,249 at the close of the fiscal year ending March 31, 1916, and the income was \$87,352. In the library were 86,000 volumes. President, Harry Augustus Garfield.

**WILSON, SIR CHARLES RIVERS.** A British financier, public official, and railroad president, died in London Feb. 9, 1916. He was born in 1831 in London and was educated at Eton and at Balliol College, Oxford, from which he graduated in 1853. Entering the Treasury three years later, he rose to be Controller-general of the National Debt Office, a post which he held for 20 years, from 1874 to 1894. For long he was identified with British interests in Egypt, first as joint Finance Minister of the country, during 1877-79, when both France and Britain were represented there and much difficulty arose from the schemes of Ismail Pasha. Even earlier, in 1876, Mr. Wilson had become a member of the Council of the Suez Canal Company, and in this interest he remained in touch with Egyptian conditions until 1895; he was credited with having done much to conciliate French shareholders and others identified with the Canal, who had become dissatisfied. The C.B. had been bestowed on Mr. Wilson in 1876, and in 1895 he received the G.C.M.G. In the latter year he assumed the presidency of the Grand Trunk Railway of Canada; but he made his home in London.

**WINTER, WILLIAM.** See LITERATURE, ENGLISH AND AMERICAN, *Essays*, American.

**WIRELESS TELEGRAPHY AND TELEPHONY.** The year was marked by improvement in the details of apparatus for radio sig-

naling, especially of those varieties of vacuum bulb devices of the audion type, for which many patents were applied for and granted. Most of these inventions were improvements upon those that had already shown their value, rather than actually new things, involving a new principle. It is hardly necessary to mention the fact that wireless telegraphy continued to demonstrate its indispensability for signaling between ships at sea, and between ships and shore stations.

There was a considerable increase in the number of radio stations in the United States, which were, as is generally known, under the control of the United States Bureau of Navigation. This bureau reported that, as of July 1, 1916, there were 452 land stations, 920 ship stations, and 5255 amateur licensed stations; the last class showing the greatest increase over the preceding year. As formerly, also, the United States government had charge of the radio stations at Sayville, N. Y., and Tuckerton, N. J., and thereby controlled absolutely the transmission to and publication of messages from Germany. Earnings of the various companies operating wireless stations were somewhat greater than had been reported for the previous year, but these companies were not as yet considered to be on a profitable commercial basis.

The United States Bureau of Standards was working on the development of radio devices for fog signals and for locating the positions of ships, and it was expected that the bureau would be able to offer valuable suggestions for the construction of apparatus of this kind at an early date. The army radio sets that had been developed for field service were in constant and satisfactory use in the maneuvers that involved the movement of troops into Mexico. As mentioned in the 1915 YEAR BOOK, radio-telegraphic service had been established between the United States and Japan through the relay station at Kahuku, Hawaii, during that year, and improvements in the transmitting and receiving apparatus made it possible during 1916 to signal directly from San Francisco to Funabashi, near Tokyo, Japan, without relaying, when atmospheric conditions permitted. Three new stations for communication across the Pacific were built by the United States government during the year (at San Diego, Cal., Pearl Harbor, Hawaii, and Cavite in the Philippines); and it was expected that regular commercial service would be inaugurated early in 1917. The large installation that had been built near New Brunswick, N. J., for communication with Carnarvon, Wales, and which had been closed since the beginning of the war, was still unused during 1916, and it was highly improbable that any attempt would be made to employ it until after the cessation of hostilities. Furthermore, in connection with transatlantic service, it was reported that a generating set of much larger capacity than any before used was under construction in Germany for service between Nauen and Sayville, the capacity of the set being reported to be 5000 kilowatts. While there were no marked achievements in long distance radio-telephony, yet it was well known that the stations that had installed apparatus of this kind were communicating more successfully than ever before, over distances of from 50 to 75 miles. While many of the commercial details of the problem had not been worked out, much was expected from

several devices that were under test at the close of the year.

Dr. Lee De Forest, at his experimental laboratory at High Bridge, N. Y., inaugurated an interesting experiment by transmitting the sounds produced by a Columbia graphophone to various radio stations within a distance of 20 miles that were equipped with radio-telephonic receivers of a sufficiently sensitive type to respond in a dependable manner. The type of transmitting apparatus used was an "oscillating audion," connected with a telephonic transmitter placed inside the cabinet of the graphophone. At receiving stations, apparatus capable of responding to either damped or undamped radiations was installed, and sensitive over a range of wave-length of from 200 to 2500 meters. It was reported that the graphophone records were distinctly audible at all stations properly equipped within the 20-mile zone. Not only were musical and other records thus sent out, but for some time a news service was maintained giving a digest of all important daily events.

Atmospheric interference, that well-known source of interference with radio communication, was still one of the difficulties that had not been overcome, although many new devices were brought out for the purpose of solving this important problem. It was considered, however, that nothing of an important nature had been accomplished in this direction. With more substantial apparatus at the sending and receiving stations, however, the service in general had become more dependable, and it was the confident expectation of radio engineers that the atmospheric trouble would soon be largely overcome.

At the close of the year, considerable difference of opinion existed regarding the expediency of government ownership of all radio stations and services. The necessity and desirability of such a thing in a state of war were maintained by one party to the controversy, while another group of people contested this idea on the ground that all important inventions and developments in radio transmission had come through private enterprise and individual, not governmental, initiative. It seemed likely, however, that in view of the prevailing national scheme of preparedness, some form of Federal ownership, amounting to more than mere control, would prevail.

**WISCONSIN. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 2,513,758. The population in 1910 was 2,333,860.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16, were as follows:

	Acreage	Prod. Bu.	Value
Corn .....	1,690,000	60,840,000	\$55,978,000
1915	1,775,000	40,825,000	27,761,000
Wheat .....	188,000	3,315,000	5,304,000
1915	205,000	4,662,000	4,429,000
Oats .....	2,200,000	81,400,000	41,514,000
1915	2,100,000	97,650,000	85,154,000
Potatoes ...	290,000	13,630,000	20,036,000
1915	298,000	25,926,000	11,667,000
Hay .....	2,600,000	4,420,000	51,272,000
1915	2,576,000	4,508,000	44,629,000
Rye .....	375,000	6,075,000	8,019,000
1915	420,000	7,770,000	6,760,000
Barley .....	610,000	18,300,000	19,215,000
1915	540,000	19,170,000	10,785,000

• Tons.

**MANUFACTURES.** The census for manufactures, taken in 1914 and completed in so far as the figures relating to the individual States are concerned in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments...	9,721	9,104
Average number of wage earners .....	182,588	194,310
Capital invested .....	\$605,657,000	\$754,287,000
Wages .....	93,905,000	112,193,000
The value of materials used .	346,356,000	417,416,000
The value of products.....	590,305,000	695,173,000

**MINERAL PRODUCTION.** Wisconsin ranks fourth among the States in the production of iron ore, being surpassed only by Minnesota, Michigan, and Alabama. The total production in 1915 was 1,095,388 gross tons, compared with 886,512 gross tons in 1914. There were shipped from the mines of the State in 1915 1,125,269 gross tons valued at \$2,188,012, compared with 591,595 tons, valued at \$1,178,610 in 1914, an increase of 90 per cent in quantity and 86 per cent in value.

The value of the mined output of lead and zinc in 1915 was \$10,486,212, compared with \$3,291,437 in 1914. The total metal content of the lead produced was 2322 short tons, valued at \$218,268, and of zinc 41,403 short tons valued at \$10,267,944.

**TRANSPORTATION.** The total railway mileage of the State in 1916 was 7592. The roads having the longest mileage are the Chicago and North Western 2168, Chicago, Milwaukee, and St. Paul 1796, Minneapolis, St. Paul, and Sault Ste. Marie 1352.

**EDUCATION.** The school population of the State in 1916 was 801,456. The enrollment was 458,102. The average daily attendance was 371,494. The number of teachers was 16,268. The expenditure for city schools was \$3,700,000; for rural schools, \$4,240,000; for graded schools, \$2,170,000; for village schools, \$2,970,000; for the University of Wisconsin, \$2,500,000; for normal schools, \$1,115,000; for continuation schools, \$733,000. The total expenditures were \$22,718,000.

**FINANCE.** The report of the State Treasurer for the fiscal year 1916 shows a balance on June 30, 1915, of \$3,943,597. The receipts for the year amounted to \$19,358,895, and the disbursements to \$19,604,213, leaving a balance on June 30, 1916, of \$3,698,278.

**CHARITIES AND CORRECTIONS.** The charitable, penal, and correctional institutions of the State include the following (the populations are given for the year ending Nov. 30, 1916): State Hospital for the Insane, at Mendota, 624; Northern Hospital for the Insane, at Winnebago, 622; School for the Blind at Janesville, 129; Industrial School for Boys, at Waukesha, 399; Wisconsin State Prison, at Waupun, 935; State Public School, at Sparta, 174; Home for Feeble-Minded at Chipewaw Falls, 1126; State Reformatory, at Green Bay, 284; State Tuberculosis Sanatorium, at Wales, 190; Hospital for Criminal Insane, at Waupun, 103; Tomahawk Lake Camp, at Tomahawk Lake, 20; Milwaukee Hospital for the Insane, at Wauwatosa, 473; and county asylums for the chronic insane, 6112. The total population of all these institutions was 11,379.

The State institutions are managed by a board known as the "State Board of Control of Wisconsin," which has complete supervision over all institutions and is also clothed with power to parole inmates of the State Prison, State Reformatory, Industrial School for Boys, and the Milwaukee County House of Correction. The board has charge also of State probation matters and all persons convicted of felonies are placed on probation by the courts of the State or put under the supervision of the State Board of Control.

The Legislature has established two new institutions, the Industrial Home for Women, in Fond du Lac County, and the Southern Home for Feeble-Minded and Epileptic, in Racine County, and contracts for the buildings for those institutions have already been made.

The Legislature has enacted a law providing aid to dependent children of worthy mothers. The State reimburses the counties in an amount equal to one-third of the amount expended by each county and the State Board of Control passes upon the cases that are entitled to State aid. The law does not provide for aid to children of divorced women.

The total expenditure for the maintenance and operation of State institutions for the fiscal year ending June 30, 1916, was \$1,191,336.71.

There are 35 county asylums for the chronic insane in the State and these institutions have a population of about 6150. Each county asylum has a large farm connected with it which furnishes employment for those patients who are in a proper physical condition to perform any labor.

The State has made provision for the care of dependent crippled and deformed children and the average population of the department for the care of that class is about 40.

The State has also made provision for the segregation of chronic tubercular insane persons and these patients are cared for in an institution that is separated from any county asylum. Ten counties of the State have established county sanatoria for the care of tubercular patients in the advanced stages and a number of other counties have already made provision for the establishment of such institutions.

**POLITICS AND GOVERNMENT.** There was no meeting of the Legislature in 1916. Elections were held for Governor and United States Senator, and the chief interest of the campaign centred about these elections. Senator La Follette was a candidate for reelection to the Senate. For Governor Emanuel L. Philipp was renominated by the Republicans. In the election of November 7th Senator La Follette was reelected by a vote of 251,303, compared with 135,144 for Wolfe, his Democratic opponent. Governor Philipp was elected by a vote of 229,889 compared with 164,555 for Williams, his Democratic opponent. For President, Hughes received 221,323 votes, compared with 193,042 for President Wilson. All the State officers elected were Republicans. A presidential primary election was held on April 4th, in which Senator La Follette received a majority of the votes for a candidate at the national convention.

The United States Supreme Court in June declared that the Wisconsin law revoking the charters of foreign corporations which removed cases from the State courts to those of the United States is unconstitutional. The cases in

point involved the Philadelphia and Reading Coal and Iron Company and the Western Union Telegraph Company.

**STATE OFFICERS.** Governor, Emanuel L. Philipp, Republican; Lieutenant-Governor, Edward F. Dittmar, Republican; Secretary of State and Auditor, Merlin Hull, Republican; Treasurer, Henry Johnson, Republican; Adjutant-General, Orlando Holway; Attorney-General, Walter S. Owen, Republican; Superintendent of Education, C. P. Cary; Commissioner of Agriculture, C. P. Norgord; Commissioner of Insurance, M. J. Cleary, Republican.

**JUDICIARY.** Supreme Court: Chief Justice, John B. Winslow; Associate Justices, Roujet D. Marshall, Robert G. Siebecker, James C. Kerwin, Aad John Vinje, Marvin B. Rosenberry, Franz C. Eschweiler; Clerk, Arthur A. McLeod.

STATE LEGISLATURE:

	<i>Senate</i>	<i>House</i>	<i>Joint Ballot</i>
Republicans .....	24	79	103
Democrats .....	6	14	20
Socialists .....	3	7	10
Republican majority..	15	58	78

**WISCONSIN, UNIVERSITY OF.** A co-educational State institution at Madison, Wis. It was founded in 1848. The total enrollment of students in all departments in the fall of 1916 was 5020, and the faculty, including assistants, numbered 726. The more important resignations from the faculty were as follows: T. S. Adams, professor of political economy; H. W. Ballentine, professor of law; E. Blackwelder, professor of geology; G. W. Ehler, director of physical education; E. C. Elliott, director of the teachers' training course; and R. S. Butler, associate professor of political economy. Among new appointments were: W. H. Page, professor of law; D. S. Hill, acting professor of education; W. H. Twenhofel, associate professor of geology; and J. C. Gaylord, acting associate professor of public speaking. During the year the four-year course in music was revised and the degree of Bachelor of Music substituted for that of Graduate in Music. In the College of Letters and Science a new course without foreign language requirements leading to the degree of Bachelor of Philosophy was established. A new \$190,000 physics building to house the department of physics, the course in commerce, and the department of political economy was erected. The productive funds of the institution amounted to \$685,627. The receipts for 1915-16, not including \$11,022 from trust-funds, amounted to \$2,765,330. The library contained 240,000 volumes. President, Charles Richard Van Hise. See also UNIVERSITIES AND COLLEGES.

**WOLCOTT, JOSIAH OLIVER.** Elected Democratic United States Senator from Delaware. Nov. 7, 1916.

**WOLF, HENRY.** An American wood engraver, died March 18, 1916, in New York City. He was born in 1852 at Eckwersheim, Alsace, and studied under Jacques Lévy, a noted engraver of Strassburg. Coming to the United States in 1871, he soon gained a reputation, and at the time of his death he was recognized as one of the two greatest contemporary masters of his art in the country, the other being Timothy Cole. Mr. Wolf exhibited abroad as well as in

the United States, receiving awards at the Paris Salon and the Paris Expositions of 1889 and 1900, at Chicago (1893), Rouen (1903), at St. Louis (1904), where he received a diploma and grand medal of honor for his services to engraving, and at San Francisco (1915), where he was awarded a grand prize. He was also a member of the juries of admission and awards at several expositions. The National Academy of Design elected him an associate in 1905 and a member in 1908; and he became identified with various other artistic societies, American and foreign. Several noted series of engravings by Mr. Wolf, such as "American Artists" and "Portraits of Ladies," appeared in *Harper's Magazine* and the *Century*. He executed portraits after Whistler, Gilbert Stuart, and other famous painters, and produced a number of original landscape engravings, including: "The Morning Star"; "The Evening Star"; "A Duck Pond"; "Lower New York in a Mist"; "Evening, Swan Lake, Central Park."

**WOLFFRAM, CHARLES B.** A German-American newspaper owner and editor, died in New York City April 3, 1916. He was born in Pomerania, Germany, in 1848, but when 19 came to the United States and since then had been identified with German newspapers in this country. After two years as editor of the *Virginia Staats-Zeitung*, he removed to New York in 1871, and gaining an interest in the *New Yorker Journal* brought this paper to success. Finally it was merged with another sheet as the *New Yorker Zeitung*. Mr. Wolfram, in 1880, during the Garfield campaign, founded the first German afternoon paper in the city, the *New Yorker Herold*. This he sold for one cent, as against the customary two cents, and it proved to be a great success. To house it Mr. Wolfram built a large plant near Park Row. Although offered several posts by Republican Presidents, he accepted none except the appointment made by President Taft of commissioner for the presentation of a statue of Baron Steuben to the people of Berlin.

**WOMAN MOVEMENT. UNITED STATES.** As in 1915, so in 1916, the continuance of the war in Europe left its impression on the activities and endeavors of women the world over. The United States was no exception to this rule. Women in this country devoted their energies to the charitable work connected with the war and to the continuance and strengthening of the pacifist movement, which sought not merely to keep the United States out of the war but to establish a connecting link between American women, the women of other neutral nations, and the women of the belligerent countries. One of the most remarkable manifestations of this movement was the Woman's Peace Convention, held at the beginning of December at Washington under the leadership of Miss Jane Addams and other prominent women. Topics discussed included a proposal for a commission representing Japan, China, and the United States to study the complex questions at issue between the Far East and this government, the establishment of Federal control over aliens, and the calling of a third Hague conference at the earliest possible moment. Earlier in the year Miss Addams, who was a member of the Ford Peace Party, visited the European capitals and interviewed government officials. Less conspicuous but yet rather widespread were the activities of other women

favorable to preparedness. Mrs. Gertrude Ather-ton and leading society women were prominent advocates of military measures; several thousand women took part in the mammoth preparedness parade in New York City, May 13th; a women's patriotic parade was held at Newport July 4th; drilling of women was begun in New York armories in the spring; rifle clubs were formed here and there; and military, aviation, and wireless instruction was given women and girls at Huguonot Park, Staten Island, at the Interstate Military Camp, Birchwood Lake, N. Y., and at Rowayton-on-the-Sound, Conn.

The woman movement in America also took advantage of the fact that this country was at peace. Movements intended to raise the status of women as well as the standard of life, such as the birth-control propaganda, were therefore able to attract extensive public attention. (See NATIONAL BIRTH CONTROL LEAGUE.) Likewise, the resolutions passed at the thirteenth biennial convention of the General Federation of Women's Clubs showed the wide scope of the activities of American women. These resolutions advocated a woman's division in the Federal Bureau of Labor, a rigid censorship of moving pictures, a pension system for civil service employees, the teaching of domestic science in the schools, the endorsement of the Federal child labor bill. Three measures especially favored by Mrs. Pennybacker, retiring president of the Federation, were also carried, that a conference of the three Americas be called in 1920, that the Federation cooperate in every way to Americanize the immigrant, and to improve rural life.

The most remarkable achievements of women in new fields of activity were the election of Miss Jeannette Rankin (q.v.) to Congress as a member-at-large for Montana and the record-breaking aeroplane flight of Miss Ruth Law from Chicago to New York (see AERONAUTICS). Among other instances may be mentioned the promotion of Dr. Katharine Davis, the first woman Commissioner of Correction to the chairmanship of the new Parole Board in New York City and the appointment of five women inspectors to the Department of Street Cleaning. On March 6th the trustees of Columbia University voted for the admission of women to the medical school, an innovation which had been violently opposed in former years. See also UNIVERSITIES AND COLLEGES.

The "feminization of industries" and the growing economic influence of woman, phenomena stimulated by the war in Europe to abnormal proportions, manifest themselves also in the United States more clearly every year. The problems of the woman worker were discussed at a conference of Southern women held in New Orleans, in April, to consider the industries peculiarly suited to girls and women. A nation-wide movement for an eight-hour day for women workers was started in December by the first Middle-Atlantic Eight-Hour Conference of the National Women's Trade Union League, held in New York. See WOMEN IN INDUSTRY.

**EUROPE.** In Europe, mainly of course in the belligerent countries, the increase in the employment of women was striking. The Women's Labor League initiated in Great Britain a series of conferences to discuss the question of the future of the women drafted into industry to take the place of men, the effect of men's wages, and the general standard of living. The precise

effect of this emergency work on the future of women in industry is still obscure, but the scope of women's work must surely be widened and artificial barriers weakened. And beyond this, as stated by an English woman, "the school of thought which thinks and speaks of the nation as men, and believes that only men can produce and serve outside the limitations of the home, must be found guilty of setting up an untrue ideal. . . . Women have not been found wanting, . . . and will earn their reward in the greater freedom that wider avenues of employment will bring them." Similar opinions were expressed in other belligerent countries. During the annual congress of the Union française pour le suffrage des femmes, which represented more than 80 feminist groups, resolutions were passed regarding women's rights as guardians and as members of family councils, the legitimation of children, the simplification of marriage, widows' pensions, care of orphans, the fight against alcoholism, the question of repopulation, the education of women, equal pay, and the demand for women's representation at the peace conference after the war. In Germany, where exactly the same process of the feminization of industries took place as in England and France, the question of equal pay for men and women was much discussed. In Holland one of the main events from the feminist standpoint, in addition to the preliminary enfranchisement of women (which is still subject to a revision of the constitution), was the admission of the first woman privat-docent, Dr. Annie Posthumus, at Amsterdam University, to lecture on modern Scandinavian philology. In Abyssinia a woman, Quizero Zeoditu (q.v.) became empress.

**DEATHS.** Many women prominent in various fields of activity died in 1916. Articles will be found on the following: Janet Achurch (Mrs. Charrington), Inez Milholland Boissevain, Susan Elizabeth Blow, Sarah Knowles Bolton, Lily Braun, Edith Woodman Burroughs, Frank Danby, Jeanne Dieulafoy, Baroness von Ebner-Eschenbach, Elizabeth (Dowager Queen of Rumania, "Carmen Sylva"), Edith M. O. Ellis (Mrs. Havelock Ellis), Jeannette Leonard Gilder, Hetty Green, Clara Louise Kellogg, Emily N. R. McLean (Mrs. Donald McLean), Helen Farnsworth Mears, Naomi Norsworthy, Mary Wright Plummer, Dora Knowlton Ranous, Ada Rehan, Agnes Robertson (Mrs. Dion Boucicault), Madame de Thebes, and Jean Webster. For other deaths, see notes in the **NECROLOGY** list on: Lady Florence Baker, Goswina von Berlepsch, Emily Montague Bishop, Clara Bewick Colby, Elizabeth Wiley Corbett, Mary Davenport, Dora Duncker, Pauline von Erdmannsdörfer-Fichtner, Sarah J. Farmer, Annie Adams Kiskadden, Natalia Macfarren, Sarah Macnaughtan, Mrs. Frederick Marrable, Mrs. Fred Niblo (Josephine Cohan), Louisa Parsons, Molly Elliot Seawell, Minnie Colvin Smith, Virginia Treves-Tedeschi, Pauline Ulrich, and Marie Wiecek.

**WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL.** The union held its forty-third annual convention at Indianapolis, Ind., Nov. 17-22, 1916. Officers of 1916 were reflected as follows: President, Miss Anna A. Gordon, Evanston, Ill.; vice-president at large, Mrs. Ella A. Boole, Brooklyn, N. Y.; corresponding secretary, Mrs. Frances P. Parks, Evanston, Ill.; recording secretary, Mrs. Elizabeth P. Anderson, Fargo, N. Dak.; treasurer, Mrs. Margaret C. Munns, Evanston, Ill. It was decided to hold a mass meeting in the interests of national constitutional prohibition in Washington, D. C., on December 10th. The corresponding secretary reported a gain in membership of 18,737. The total receipts of the organization for the year amounted to \$133,526.20 and the disbursements to \$145,229.99. During the year Miss Julia F. Deane, who had been managing editor of the *Union Signal*, an official paper of the W. C. T. U., became its editor, succeeding Miss Anna A. Gordon. The chairman of the committee on publications reported that the publishing house of the organization had put out during the year many millions of pages of printed matter. The president in her address discussed the progress of the year in securing prohibition by law in the United States and other countries. She stated that since the preceding convention eight States had become dry, making a total of 23 States and the Territory of Alaska white on the prohibition map.

**WOMAN SUFFRAGE. UNITED STATES.** For the woman suffrage movement the year 1916 was one of promise and encouragement if not of actual progress. In the United States the interest of the advocates as well as of the adversaries of woman suffrage centred in the presidential election. Never before in the history of this country had the question of woman suffrage played such a prominent part in an election campaign, never before had women displayed

such activity in all parts of the country as during this campaign. Although the success of the group of Eastern women who toured the West in the interest of the Republican candidate has been questioned, the "Women's Special" stands nevertheless as a conspicuous instance of the growing activity and influence of American women in national politics. This was further shown by the stand taken on the suffrage question by the candidates of the contending parties.

On August 1st, Charles E. Hughes, the Republican nominee, announced that he favored unqualifiedly an amendment to the Federal Constitution that would give the vote to women. His general endorsement of woman suffrage in his speech of acceptance, he said, was his approval, as a candidate, of the plank in the Republican platform, whereas his personal conviction was that women should obtain the vote from the national government. On the Democratic side President Wilson, in a letter to the Jane Jefferson Club on August 12th, declared that he would do all in his power to make the Democratic suffrage plank effective. This plank favored the extension of suffrage through State action.

The stand taken by the Democratic party and its candidate was vigorously assailed by suffragists. The National Woman's party, organized (with Miss Maude Younger of California as temporary chairman) by the Congressional Union for Woman Suffrage during the Republican national convention, pledged itself at its executive conference at Colorado Springs, August 1st, to use its best efforts in the 12 suffrage States to defeat the Democratic candidate for President. It congratulated the Progressive, Prohibition, and Socialist parties upon their endorsement of suffrage for women by national action, and commended the position taken by Charles E. Hughes, the Republican nominee. Efforts to obtain a formal endorsement by Mr. Hughes were, however, defeated. The President and the Democratic party were further assailed on August 27th at the opening of the election campaign of the Congressional Union for Woman Suffrage at a mass meeting at Atlantic City, N. J., before an audience of 2100. On September 8th President Wilson addressed the convention of the National American Woman Suffrage Association at Atlantic City, predicting victory for the cause of woman suffrage within a short time and declaring that he had come to fight with them. In his address the President did not mention his previously expressed belief that suffrage should come by action of the States.

The much-debated question whether woman suffragists ought to concentrate their efforts on either the State or the national field was decided at the Annual Convention of the Woman Suffrage Association in September by rejecting proposals in that direction and upholding the established policy of activity in both. A million-dollar fund was voted at the same convention to keep up the suffragists' "lobby" at Washington. Mrs. Carrie Chapman Catt, who had taken office in January as president of the association in succession to Dr. Anna Howard Shaw, was reflected. The National Woman's party chose as its platform the Susan B. Anthony amendment to the Constitution of the United States, "The right of citizens of the United States to vote shall not be denied or

abridged by the United States, or by any State on account of sex." The party stated it would endeavor to consolidate the votes of the 12 Western States where women have been granted the franchise for the presidential candidate who should come out in favor of the Federal amendment. Progress was made on a suffrage hall in Washington as a memorial to Susan B. Anthony.

The importance of the political power of women at the present time may be judged from the fact that 4,000,000 votes were cast by them in the presidential election. Of these 2,000,000 were cast for the first time.

A tragic incident of the election which attracted the attention of the nation to the great sacrifices which women are making for the cause of woman's enfranchisement was the death from exposure and over-exertion while on a speaking tour for the Woman's party of the beautiful and devoted suffragist, Inez Milholland Boissevain (q.v.).

The first national convention of women opposed to woman suffrage was opened at Washington, December 1st, with addresses by Maj. Gen. Leonard Wood, Miss Mabel T. Boardman, member of the American Red Cross Central Committee, and Mrs. Arthur M. Dodge of New York, president of the Association Opposed to Woman Suffrage, at whose call the convention was held. Cardinal Gibbons sent a special message condemning woman suffrage, and former Senator Elihu Root of New York, in a paper on the constitutional phase of the proposed equal suffrage amendment, characterized it as "a destruction of the right of self-government and a subjection of the people of New York to the government of others." Relief work done for the Red Cross by anti-suffrage organizations was the subject of Miss Boardman's address.

A remarkable result of the congressional elections from the point of view of woman suffrage was the election of Miss Jeannette Rankin (q.v.) to Congress on the Republican ticket as representative-at-large from Montana. Miss Rankin, the first woman elected to Congress, is president of the woman suffrage organization in her State. In general, however, the cause of woman suffrage had little progress to register either in State or in Federal legislation. As to Federal legislation the judiciary committee of the House of Representatives, December 14th, ordered the proposed Susan B. Anthony Federal Suffrage amendment (text quoted above) reported without recommendation. The vote was 11 to 8. The House itself struck from the Porto Rican citizenship bill, by a vote of 80 to 59, the amendment adopted May 22nd granting woman suffrage to the island.

*State Legislation.* Aside from the fact that the suffrage question occupied a good deal of the attention of State legislative bodies and of voters, little progress was made toward equal franchise—the Legislature of New York alone taking favorable action. In Maryland a bill to submit to the voters a constitutional amendment granting suffrage to women failed to pass the 1916 Legislature. Likewise in Oklahoma a joint resolution authorizing the submission to the voters of a woman suffrage amendment to the State constitution failed to pass the Senate, although it had been adopted on February 12th by the Assembly. In New York, however, the proposal that another referendum on woman

suffrage be submitted to the voters in 1917 was passed by the Assembly by a vote of 109 to 30 on March 14th, by the Senate 33 to 10, April 10th. In Iowa an amendment providing for woman suffrage was rejected, June 6th, by a vote of 173,024 to 162,683. The Iowa Supreme Court, however, handed down an opinion that women have the right to vote on questions wherein taxation is involved. The decision was given in January in the municipal court and street car franchise election case, when one of the principal points raised against the validity of the election was the fact that women should not have been allowed to vote. A compilation of the decisions on woman suffrage in Illinois showed that Illinois women may vote for presidential electors but not for delegates to national conventions, nor may they take any part in preferential presidential primaries. They may vote for trustees of the State university, but not for a county judge or sheriff. They may not vote for a Governor or Secretary of State or Attorney-General. They may vote for a mayor and aldermen in cities, but not for police magistrates or any judicial officers. Women in Illinois are not allowed to vote for members of the State Legislature nor for Representatives in Congress, nor for committeemen of the political parties, nor may they vote on an amendment to the State constitution. On November 7th suffrage amendments to the State constitutions were defeated in South Dakota by a vote of 58,350 to 53,432, in West Virginia by a vote of 161,607 to 63,540, and in Louisiana (amendment to article 1210 of the constitution, relative to women as office holders) by a vote of 33,132 to 17,636. As to municipal suffrage, women achieved a success at East Cleveland, Ohio, where an amendment to the city charter granting woman suffrage, in so far as voting at all municipal elections and holding municipal offices are concerned, was adopted on June 6th by a vote of 936 to 508.

**CANADA AND MEXICO.** Outside the United States woman suffrage made progress in the western hemisphere by the adoption of woman suffrage in Alberta, British Columbia, Manitoba, and Saskatchewan. In Mexico the women of Yucatan are the first Spanish-speaking women of the world to exercise the privilege of the ballot. Suffrage was granted by the Governor-General of that state following a congress of 3000 women held in Merida.

**EUROPE.** In Europe the year 1916 showed that the cessation of suffrage activity was only temporary and that the war service of women had added force to the demand of enfranchisement. However, critics differ as to the outcome of these years of the feminization of industrial and civic life in Europe. On one point they are agreed—the women of the nations involved in the war gained through the services rendered to their countries during these years the strongest possible support for their demands for equal suffrage when the period of reconstruction begins. In *Great Britain* a promising outlook for a speedy solution of the suffrage problem after the end of the war was given by a statement of Premier Asquith, for years an obstacle in the path of English suffragists, that in future any new bill for franchise reform must include votes for women. In an address before the House of Commons on August 14th, Mr. Asquith declared that the women had presented an un-

answerable case. There have been similar conversions among men of all parties which showed that the capacity and willingness to help in the national cause as displayed by the women during the war has removed the last obstacle to their receiving political recognition and that even after the resignation of the Asquith ministry similar opinions will be held by his successors.

In *France* the annual congress of the Union française pour le suffrage des femmes urged that country to remember the demands of women after the war is ended, and in *Germany* the Frauen-Stimmrechts-Bund addressed a petition to the Reichstag demanding the vote for women. Later in the year the two great suffrage organizations were consolidated into the "German Imperial Association for Woman Suffrage" with the purpose of securing for German women in the separate countries and states the same public rights which are granted to men, and especially to secure the vote and eligibility for legislative and administrative bodies, to urge women in these German countries, counties, and classes that have granted political or any other vote to women, to use such vote, and through political education to work to encourage women to take an active part in all branches of the political and social public life. In *Holland* a bill was introduced in January into parliament to remove the constitutional obstacles placed in the way of women voting for the 100 members of the second chamber and to grant them the right to be elected to office, although it does not give them the ballot. Under its provisions, a woman to vote must be at least 25 years old, assured of a certain minimum yearly income, varying according to locality, and be neither pauper, criminal, nor lunatic. On November 15th the Dutch Parliament passed by unanimous vote a resolution removing the sex disability of women. The actual granting of the vote to women, however, depends on the passing of an electoral bill. On November 17th the Dutch lower chamber voted the eligibility of women to membership in the States-General during a discussion on the revision of the constitution. **WOMEN, EDUCATION OF.** See **UNIVERSITIES AND COLLEGES.**

**WOMEN IN INDUSTRY.** Recent years have witnessed a rapid development of fact and opinion relating to various aspects of the industrial employment of women. This has been reflected in legislation against night work, shortening of hours toward the eight-hour standard, increased prohibitions against the employment of women in dangerous occupations, requirements relating to seats for clerks, rest rooms, and separate toilet facilities, special prohibition of industrial labor immediately before or after

child birth, establishment of maternity pensions, and a very widespread tendency toward the enactment of minimum wage requirements. Matter relating to the employment of women will be found under MINIMUM WAGE; PENSIONS FOR MOTHERS; and PROSTITUTION.

**UNITED STATES.** An interesting aspect of the employment of women in the United States has been their increasing entrance into unique and specialized occupations. Thus library work each year calls for an increased quota of college-trained women. Commercial wireless telegraphy has also been undertaken both on land and sea and several training posts for girls have been established. The number of women investigators increases annually. They are now employed by municipal, State, and Federal governments in numerous kinds of survey and research work. Numbers of women find profitable and congenial labor as architects and illustrators, while in all large cities of the country orchestras composed exclusively of women are found in hotels, restaurants, and theatres. According to statistics of the Government Bureau of Labor, daughters 16 years old and over rival their fathers as providers for the family. The incomes of 2000 families of cotton mill workers in New England and the South were studied and the daughters over 16 in the average family of both North and South were found to be the mainstay. Each daughter earned less than the father, but the average income of the daughters of all the families, of which some had more than one daughter, was higher than the average income of the fathers. The sons over 16 years made better wages than the daughters, but in New England they contributed only 82 per cent of their incomes to the family purse, whereas the daughters contributed 96 per cent of theirs. In the South the amounts contributed were 72 per cent and 89 per cent respectively.

**Shorter Hours Movement.** Appreciating the need of uniform legislation in regard to a shorter working day for women, large numbers of New England women held a conference in Boston in May to consider the best means for promoting passage of a bill covering such a need. This movement for interstate cooperation spread to other sections of the country, and on October 6th-8th the Women's Trade Union Leagues of the Middle West with delegates from Illinois, Ohio, Kansas, Missouri, Kentucky, and Wisconsin, held a conference in Chicago. From discussions it became evident that Congress would soon be asked to pass a bill limiting the work day of all women who are engaged in the manufacture of goods for interstate commerce to eight hours. This bill will be modeled on the lines of the new Federal child labor law. A bill was endorsed by the conference providing for an eight-hour law and a 48-hour week as the minimum demand of women both organized and unorganized. This bill will be presented in nearly the same form in the various States. The conference, though primarily one of trade union women, was heartily backed by branches of the National Consumer's League, women's clubs, suffrage organizations, and the Women's Church Federation. In Wilmington, Del., October 17th, a regional conference on the eight-hour day for women was held. This body adopted unanimously resolutions for campaigning for simultaneous legislation in Congress and the States similar to those of the Chicago conference. For legisla-

tion, see LABOR LEGISLATION, section on Hours.

**IN BELLIGERENT NATIONS.** Doubtless the most important aspect of the employment of women during the past few years has been their entrance in enormous numbers into all branches of manufacturing and trade throughout the nations at war. This tendency continued in even more marked degree during 1916, owing both to the increased demand for labor and to the increased depletion of male workers through military recruiting. Reports from all parts of Europe indicated that there remained scarcely any branch of human industrial efforts into which women had not entered. This was true also in Canada and Australia. Thus on June 14th the Women's Emergency Corps representing 3000 women of Toronto offered their services as industrial workers in order to release men for military duty. This movement in fact seemed likely to amount to a virtual revolution in the industrial and social status of women. Not only did it tend to undermine the strength of trade unions, but it was accompanied by a great extension of governmental regulations of all phases of industry and by a universal recognition of the high services which the labor and patriotic loyalty of women had rendered to their respective nations.

**Great Britain.** The increased employment of women in British industries was strikingly set forth in the Board of Trade *Labour Gazette* for October. Here it was estimated that the total increase in the number of females employed up to July, 1916, was 866,000. This represented an increase of 283,000 since April, 1916. The increase up to July was distributed as follows: industrial occupations, 362,000; commercial, 198,000; professional, 15,000; banking, 30,000; hotels and restaurants, 19,000; agriculture, 66,000; transport (not including municipal), 31,000; civil service, 48,000; arsenals and dockyards, 69,000; and local government employees, 28,000. The total represented an increase of 27 per cent over the numbers employed in July, 1914; and did not include domestic service and the dressmaking trade, which together showed a decrease of 150,000 in the number of girls and women employed. The total, moreover, did not include 27,000 more women attending sick and wounded than in 1914. It was found that women were directly replacing men even in building, mining, and quarrying; that considerable numbers had entered the metal industries; that 25,000 of them had replaced men in the cotton trade; and that women had replaced considerable numbers of men in grain milling, sugar refining, leather working, and in the wood working, glass, china, earthenware, and rubber industries. Railway companies increased their women employees from 11,000 to 33,000; and in municipal work they had entered all lines, including tram drivers and workers on sewage farms, gas works, and road cleaning.

Since January, 1915, for the first time in history the whole world of work has been open to women with the exception of a few occupations necessarily confined to men. A very serious shortage of women's labor chiefly in textile and clothing resulted, and the high wages paid to munition workers was held responsible for this. About 300,000 women were estimated to be doing men's work. By the regulations of the government Munitions' Labor Supply Committee

women on men's work now receive the same piece rates and the same overtime rates as men, are granted bonuses under the same conditions as men, and work on time schedule under similar conditions. This committee has also set 4d. per hour as a minimum wage for women engaged on women's work. For these women overtime rates yield 33½ per cent above usual rates. Sunday work and long hours have been found injurious to woman's health as well as less productive in output. Night work has been found especially harmful in its effects on her health, especially when much of the following day is given up to household tasks. Hence the committee recommended that measures be taken for remedying these conditions. See under LABOR, and WELFARE WORK, paragraphs on *Great Britain*.

*Germany.* German women, like those of France and Great Britain, undertook the work of men in nearly all occupations. Figures comparing the employment of the two sexes showed that on Aug. 1, 1914, the Krupp works employed 36,880 men and 1241 women, the latter only as charwomen, saleswomen, or assistants in shops. By the summer of 1916, however, 14,000 women and 56,000 men were employed. As a result of woman's widespread employment in industry with marked success, a movement was initiated in favor of compulsory government service for women analogous to military service for men. By this plan work will be required of all women except those prevented by motherhood or physical incapacity. Many professional women and those working in social and charitable organizations objected to this service because of interference with their regular professional duties. Also opponents were found in great numbers among the radical groups, both of men and women.

Phases of the employment of British women in war time were treated in reports of the National Union of Women Workers and the Women's Industrial Council, both of London.

**WOMEN'S CLUBS, GENERAL FEDERATION OF.** The Federation, which was organized in 1889, in New York, met in the same city for its 13th biennial convention, May 24-June 1, 1916. About 9000 delegates and others attended the convention. Some 2100 clubs are now members of the Federation. They are to be found all over the United States and even in Alaska and the Canal Zone. The following officers were elected for 1916-18: president, Mrs. Josiah Evans Cowles, Los Angeles, Cal.; first vice-president, Miss Georgie A. Bacon, Worcester, Mass.; second vice-president, Mrs. Eugene Reilly; re-

cording secretary, Mrs. W. I. McFarland, Wagner, S. Dak.; corresponding secretary, Mrs. Francis D. Everett, Hyland Park, Ill.; treasurer, Mrs. William B. Young, Jacksonville, Fla.; auditor, Mrs. William P. Harper, Seattle, Wash. Mrs. Percy V. Pennybacker was the retiring president. See also WOMAN MOVEMENT.

**WOOL.** See STOCK RAISING AND MEAT PRODUCTION.

**WORCESTER FESTIVAL.** See MUSIC, *Festivals*.

**WORCESTER POLYTECHNIC INSTITUTE.** A non-sectarian institution for the technical education of men at Worcester, Mass. It was founded in 1865. There were 539 students enrolled in the fall of 1916 and the faculty, including assistants, numbered 52. During the year a new professor of physical education was appointed. The institute received by bequest \$55,125. Mr. Charles G. Washburn, president of the corporation of the Institute, gave \$50,000 to it, and buildings and apparatus valued at \$95,019 were also received. In June a new gymnasium was opened. In productive funds the institute had \$921,698, from which it gained an income in 1915-16 of \$42,540. There were 16,000 volumes in the library. President, Ira Nelson Hollis.

**WORKMEN'S COMPENSATION.** Beginning in 1911 a movement for the enactment of workmen's compensation laws rapidly spread over the entire United States. These laws were designed to replace the older employer's liability laws by a system of definite compensation for industrial accidents, and in many cases for occupational diseases, without the necessity of resorting to law suits. The essential principle of the compensation laws is that an employee who suffers an injury while engaged in his occupation should be entitled to a payment proportioned to the injury he receives. In many cases the amount of such payment for specified industries is stated in the law; in other cases, a commission is authorized to fix the compensation under general rules laid down in the act. Whereas formerly not over 25 per cent of the money paid by employers to liability insurance companies finally reached injured employees, under the new laws administration expenses constitute only a few per cent of employers' contributions. New laws became effective in Maine and Pennsylvania on Jan. 1, 1916, in Kentucky on August 1st, and in Porto Rico on July 1st, while the new Federal law went into effect September 8th. There were thus 35 States and Territories having compensation laws; in addition laws had been enacted for Alaska, the Canal Zone, Hawaii, and the United States. Moreover, in harmony with this movement various States have established the principle of compensation in regard to public employees. Compensation laws for private employees are either compulsory or elective. When elective special inducement is given to the employer to come under the law. In a considerable number of States the principle of insurance has been extensively applied in the determination of rates and the administration of the acts. The following States have compulsory laws: Arizona, California, Maryland, New York, Ohio, Oklahoma, Washington, and Wyoming; in the Canal Zone, and in Hawaii. Elective laws have been enacted

in the following States: Colorado, Connecticut, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Massachusetts, Michigan, Minnesota, Montana, Nebraska, Nevada, New Hampshire, New Jersey, Oregon, Pennsylvania, Rhode Island, Texas, Vermont, West Virginia, and Wisconsin, and in the Territory of Alaska.

**LEGISLATION.** The most important enactments of the year were the new laws passed by Congress and by the Legislatures of Kentucky and Porto Rico. South Carolina and Virginia enacted laws establishing employers' liability for railroads. Louisiana made various modifications in the conditions for granting compensation; Massachusetts reduced the waiting period for compensation from 2 weeks to 10 days and made other changes; New Jersey created a "Workmen's Compensation Aid Bureau" to observe the operation of compensation laws in that and other States and countries and report suggested modifications; New York extended the scope of its compensation act, provided elective compensation for non-hazardous callings, and increased the scale of compensation in various respects.

The Kentucky law established an elective system with the proviso that employers not electing it should lose the benefit of the fellow-servant, contributory negligence, and the assumption of risk rules. The act is made to apply to municipalities and other political divisions, as well as corporations and other private employers. In case the injury is due in part to "intentional failure" of the employer to comply with safety laws compensation is increased 15 per cent, whereas it is diminished 15 per cent if similar failure exists on the part of the employee. As usual the employer is required to provide medical, surgical, and hospital treatment; and the State Board is authorized to regulate medical fees. "Contracting out" from the act is prohibited. The scale of compensation provided is standard. Thus in case of death, in addition to burial expense, 65 per cent of weekly earnings, but not less than \$5 nor more than \$12 per week for 335 weeks, and not over \$4000 in total is granted. Proportionate compensations are granted for total disability, temporary disability, and permanent partial disability, with gradations for different degrees of dependency or relationship. The Workmen's Compensation Board is to consist of three members appointed by the Governor for four years at \$3500 a year. All carriers of compensation insurance must report to the State Insurance Commissioner. Moreover, the Kentucky Employees' Insurance Association is created as a mutual corporate body to carry such insurance.

The Porto Rico law is also elective, but the scale of compensation is differently reckoned though equally liberal.

The Federal law provides disability or death benefits for all civil employees of the United States when injury occurs in the performance of public duty, except in case of willful misconduct or intoxication. Medical, surgical, and hospital service and supplies are provided. For total disability the compensation is two-thirds of the monthly pay, but not more than \$66.67 a month, and not less than \$33.33, during continuance of disability. For partial disability compensation is two-thirds of the difference between monthly pay at the time of injury and subsequently. In case of death, in addition to

burial expenses up to \$100, allowance is made of 35 per cent of monthly pay for a widow, and 10 per cent for each child up to a total of 66% per cent; and graded allowances are made for all degrees of relationship and dependency. In computing compensation in case of death monthly pay is considered to be not more than \$100 nor less than \$50. A commission of three members at \$4000 each is created to administer the law; and \$50,000 for administrative expenses and \$500,000 for compensation were made for the fiscal year 1917. In addition a separate fund to be known as the Employees' Compensation Fund was established, with a special appropriation of \$500,000.

**BRITISH COLUMBIA.** A committee to investigate the operations of modern systems of workmen's compensation laws in the United States and Eastern Canada was appointed in British Columbia on Sept. 27, 1915. It visited the States of Washington, Oregon, California, Wisconsin, Ohio, New York, and Massachusetts, and the provinces of Ontario and Nova Scotia, and held hearings at Vancouver. On the basis of its findings a law was enacted May 31, 1916, to become effective Jan. 1, 1917. This law incorporates numerous accident prevention provisions and provides medical benefits in addition to the usual features of workmen's compensation. The act is compulsory and widely inclusive, and requires insurance in a provincial fund. A board of three members to be appointed for terms of 10 years is given extensive powers of inspection and regulation. While the entire cost of compensation is placed on the employer he is required to deduct one cent each day from the wages of employees for a medical-aid fund. Liberal benefits are provided in case of death for widow, invalid widower, and each child under 16; orphan children receive double benefits. For total disability the compensation is 55 per cent of workmen's wages, but not less than \$5 per week. Partial disability is compensated on the basis of wage loss.

**Bibliography.** Among 1916 publications may be mentioned the following: J. F. Connor, *Employers' Liability, Workmen's Compensation, and Liability Insurance*; W. M. Glass, *Law of Workmen's Compensation*; Insurance Federation of Minnesota, *Up-to-Date Facts About Workmen's Compensation*. Reports were issued by the industrial accident boards or workmen's compensation bureaus of California, Connecticut, Hawaii, Illinois, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Nebraska, New York, Ontario, Oregon, Pennsylvania, Vermont, Washington, and Wisconsin. The Workmen's Compensation Publicity Bureau of New York City issued various pamphlets during the year.

**WOUNDS, WAR. See SURGERY.**

**WRESTLING.** The winners of the Amateur Athletic Union wrestling championships held at Newark, N. J., were: 108-pound class, George Taylor, National Turn Verein, Newark; 115-pound class, Kalmar Borsits, Gary, Ind., Y. M. C. A.; 125-pound class, C. Lijehult, Bronx Church House, New York; 135-pound class, William Hallas, Greek-American A. C., Chicago; 158-pound class, William Americus, Greek-American A. C., New York; 175-pound class, N. G. Pendleton, New York A. C.

Cornell for the fourth year in succession won the inter-collegiate championship, with Princeton second and Lehigh third. The winners of

the various bouts were: 115-pound class, Wiss, Princeton; 125-pound class, Wigten, Cornell; 135-pound class, Hess, Lehigh; 145-pound class, Milligan, Pennsylvania; 150-pound class, Saeger, Cornell; 175-pound class, McKeage, Cornell; unlimited class, Dorizas, Pennsylvania.

Professional wrestling instruments were held in various cities throughout the United States, Joe Stecher making the best showing. He defeated among others "Cyclone" Burns, John Perelli, Joe Rogers, Dr. Ben F. Roller, and Americus, and battled to a draw with "Strangler" Ed Lewis. The international tournament held at New York City was won by Alexander Aberg.

**WUNDT, WILHELM.** See **PSYCHOLOGY, Social Psychology.**

**WÜRTTEMBERG.** A European kingdom, one of the more important of the constituent states of the German Empire. The capital is Stuttgart. See **GERMANY, section Area and Population.**

**WYOMING. POPULATION.** The estimated population of the State on Dec. 31, 1916, was 182,264. The population in 1910 was 145,965.

**AGRICULTURE.** The acreage, production, and value of the principal crops, as estimated by the United States Department of Agriculture, in 1915-16, were as follows:

	Acreage	Prod. Bu.	Value
Corn .....	1916 25,000	550,000	\$495,000
	1915 35,000	875,000	536,000
Wheat .....	1916 165,000	3,560,000	5,162,000
	1915 125,000	3,315,000	2,586,000
Oats .....	1916 245,000	8,575,000	5,145,000
	1915 227,000	9,584,000	4,100,000
Potatoes .....	1916 18,000	2,340,000	2,995,000
	1915 17,000	2,550,000	1,530,000
Hay .....	1916 580,000	1,044,000	12,528,000
	1915 550,000	1,210,000	9,488,000
Rye .....	1916 10,000	155,000	167,000
	1915 12,000	240,000	216,000
Barley .....	1916 25,000	825,000	718,000
	1915 17,000	612,000	337,000

a Tons.

**MANUFACTURES.** The census for manufactures, taken in 1914 and completed in so far as the figures relating to the individual States are concerned in December, 1916, disclosed the following comparative condition of manufactures in 1909 and 1914:

	1909	1914
Number of establishments.....	268	337
Average number of wage earners	2,867	2,989
Capital invested .....	\$8,195,000	\$29,270,000
Wages .....	2,081,000	2,312,000
The value of materials used....	2,608,000	5,560,000
The value of products.....	6,249,000	11,224,000

**MINERAL PRODUCTION.** The coal production of the State in 1916 was 7,500,000, an increase compared with 1915 of 946,000, or 14 per cent. The increase is attributed mainly to greater consumption of coal by railroads. The car supply was nearly equal to requirements except in September and October. The supply of labor was short in November and December.

The coal mined in the State in 1915 was 6,654,038 short tons. The total value was \$10,033,347, compared with \$9,555,804 in 1914. The number of men employed in the coal mines of the State during the year was 7244, compared with 8117 in 1914. There were produced in the State in 1915 4,245,525 barrels of petroleum,

compared with 3,566,335 barrels in 1914. The iron mined in the State in 1915 amounted to 434,513 gross tons, compared with 366,962 tons in 1914. The total production of gold, silver, and copper in 1915 was \$93,296 as compared with \$7384 in 1914. The greatest increase was in copper.

**TRANSPORTATION.** The total railway mileage of the State is about 2000. The roads having the longest mileage are the Union Pacific, 470; the Chicago, Burlington, and Quincy, 236. The total value of the railways of the State is \$51,885,420.

**EDUCATION.** The total school population of the State in 1915 was 37,595. The enrollment was 30,816. There were 223 male, and 1411 female teachers. The average monthly salary of male teachers was \$82.96 and of female teachers \$58.41.

**FINANCE.** The report of the State Treasurer for the fiscal year 1914-16 shows a balance on hand Oct. 1, 1914, of \$718,426. The total receipts amounted to \$3,559,029, and the disbursements to \$2,718,117, leaving a balance on hand Sept. 1, 1916, of \$1,046,606.

**CHARITIES AND CORRECTIONS.** The charitable and correctional institutions include State Hospital for the Insane at Evanston, Wyoming State Penitentiary at Rawlins, Wyoming Soldiers' and Sailors' Home at Buffalo, Big Horn Hot Springs Reservation at Thermopolis, General Hospitals at Sheridan, Rock Spring, and Casper, the Wyoming School for Defectives at Lander, Wyoming Industrial School at Warland.

**POLITICS AND GOVERNMENT.** The political campaign in Wyoming in 1916 abounded in surprises. The official count gave to President Wilson a plurality of 6618 votes over Mr. Hughes, in spite of the fact that it was expected that the State would go Republican by 2000. John B. Kenrick, Democratic candidate for United States Senator, defeated Clarence D. Clarke, who was a candidate for reelection, by 3066 votes. Frank W. Mondel, Republican, who had represented Wyoming in the lower house of Congress for 20 years, was reelected by 537 votes. The Republicans as usual carried both branches of the Legislature—by a majority of five votes in each house. The Republican party has been more or less divided since the insurgent revolt in 1910. While most of the Progressives in 1912 were Republicans under novel conditions some of the influential leaders like John M. Carey, former Governor, campaigned the State for Mr. Wilson. The two factors which are responsible for President Wilson's victory in Wyoming were the belief that he kept the country out of war and his efforts in behalf of the Adamson eight-hour law. During the year the State was in a highly prosperous condition industrially and financially.

**STATE OFFICERS.** Acting Governor, Frank L. Houx; Secretary of State, Frank L. Houx; Treasurer, Herman B. Gates; Auditor and Commissioner of Insurance, Robert B. Forsythe; Adjutant-General, R. Anderson; Attorney-General, D. A. Preston; Superintendent of Public Instruction, Edith K. O. Clark; Houx, Anderson, and Preston, Democrats, others Republicans.

**JUDICIARY.** Supreme Court: Chief Justice, Charles N. Potter; Associate Justices, Cyrus Beard, and R. H. Scott; Clerk, W. H. Kelly.

STATE LEGISLATURE:

	Senate	House	Joint Ballot
Republicans .....	16	31	47
Democrats .....	11	26	37
Republican majority..	5	5	10

**WYOMING, UNIVERSITY OF.** A co-educational State institution at Laramie, Wyo. In the academic year 1915-16 there were 573 students and 75 instructors. The productive funds of the university amounted to \$92,047 and the total income from all sources was \$258,493. There were 39,000 volumes in the library. President, Clyde Augustus Duniway.

**X-RAYS.** See CHEMISTRY, GENERAL; PHYSICS.

**YACHTING.** No international yachting races were held during 1916, Sir Thomas Lip-ton's *Shamrock IV* remaining in drydock at the Erie Basin, Brooklyn. The year, nevertheless, was an active one in yachting circles, more than 50 new boats being added to the already long list of racing craft.

The New York Yacht Club staged 96 races on its annual cruise, which lasted 14 days. The winners of the more important contests were: Navy Challenge Cups, *Amorilla* and *Lesmona*; Alumni Association, U. S. N., *Miladi* and *Okee*; Rear Commodore's Cups, *Elena* and *Flying Cloud*, *Aurora* and *Jessica*; Commodore's Cups, *Irolita* and *Flying Cloud*, *Barbara* and *Okee*; Vice-Commodore's Cups, *Elena* and *Amorilla*, *Aurora* and *Squaw*; Astor Cups, *Elena* and *Aurora*; King's Cup, *Elena*.

Morton F. Plant's *Elena*, which he later sold to Cornelius Vanderbilt, was the star schooner of the season, defeating Robert E. Tod's *Katoura* in the ocean race for the Cape May Cup in addition to winning the chief trophies on the New York Yacht Club cruise.

The disqualification of the Quincy, Mass., Yacht Club's "P" class sloop, *Ahmeek*, owned and sailed by Charles Francis Adams, was the only unfortunate occurrence of the season. After the *Ahmeek* had been returned victor over 11 other sloops of her class in three races on Long Island Sound it was found that she carried 30 feet more canvas than the rules allow. First prize was therefore given to the *Nahma*, representing the Indian Harbor Yacht Club. Addison G. Hanan, owner of the *Nahma*, however, refused to accept the trophy and returned it to the original donor, the Manhasset Bay Yacht Club, accompanied by a challenge to sail a race for the cup in 1917.

The feature of the year in motor boating was the remarkable showing made by *Miss Minneapolis*, a 20-foot hydroplane built by popular subscription for a syndicate named the Miss Minneapolis Boat Association. This craft broke all records by covering a half-mile on Put-in-Bay at a speed of 65.7 miles an hour. *Miss Minneapolis* also captured the Gold Challenge Cup, racing at Detroit against five other boats, her speed average for the three races being 48.6 statute miles an hour. The *Hawkeye* won the first of a series of races for the Thousand Islands Challenge Cup.

**YADKIN RIVER DAM.** See DAMS; WATER POWER.

**YALE UNIVERSITY.** A non-sectarian institution at New Haven, Conn., founded in 1701.

The Graduate School, Art School, and School of Music are co-educational. In the fall of 1916 the total enrollment of students was 3251 and the faculty numbered 365, not including assistants. During the year Prof. Henry A. Beers, for long senior member of the department of English in Yale College, retired, and Dean Henry Wade Rogers of the Law School resigned after his appointment as judge of the United States Circuit Court. The following important additions to the faculty were made: Ernest Fox Nichols (formerly president of Dartmouth College), professor of physics; Walter Wheeler Cook, professor of law; Thomas Sewall Adams, professor of political economy; Thomas Walter Swan, professor and dean of the Law School; Luther Allan Weigle, Horace Bushnell professor of Christian nurture; Austin Morris Harmon, professor of Greek and Latin. Dr. Wilbur L. Cross, formerly professor of English in the Sheffield Scientific School, was appointed dean of the Graduate School, and Andrew Keogh, formerly reference librarian, was appointed university librarian. In the interest of administrative efficiency it was decided to reorganize the Graduate School, grouping the faculty in three divisions. A university Board of Health was established and Dr. James C. Greenway was appointed university health officer. A new building was begun for the Sprague Memorial Music School. Payments received during the year on account of the estates of Justus S. Hotchkiss, Lord Strathcona and Mount Royal, Brayton Ives, and Matthew C. D. Borden amounted to over \$1,600,000. From Mrs. Dotha Bushnell Hillyer was received \$100,000 to found the Horace Bushnell Memorial professorship fund. In 1916 the productive funds of Yale University amounted to \$18,431,444 and from all sources an income of \$1,872,108 was obtained. There were approximately 1,000,000 volumes in the library. The university was included in the plan of the National City Bank of New York to offer fellowships for the bank's course in foreign banking and commerce, providing work and pay in summer and assuring positions on graduation. Six such fellowships were accepted by Yale. On October 20th, 21st, and 22nd the university celebrated the two-hundredth anniversary of its removal to New Haven. Elaborate preparations were made for the event and the programme included a masque by John Jay Chapman entitled *Cupid and Psyche*, commemorative addresses, church services, a city celebration, and a great historical pageant staged in Yale Bowl. Eight thousand persons took part, and there were 40,000 spectators. Some of the scenes presented were particularly impressive in a spectacular way and for the attention given to details as well as to the mass effect (see also MUSIC, *General News*). During the year the university lost by death Dr. Timothy Dwight (q.v.), the revered president emeritus of the institution. President, Arthur Twining Hadley.

**YEATS, WILLIAM BUTLER.** See LITERATURE, ENGLISH AND AMERICAN, *Essays*, English.

**YELLOW JACKET, THE.** See DRAMA.

**YOUNG MEN'S CHRISTIAN ASSOCIATION.** The central control of this organization is vested in the International Committee of the Young Men's Christian Association, which has its headquarters at 124 East 28th Street, New York City. In 1916 the committee had 100

members, all of them Christian laymen (chairman, Alfred E. Marling; treasurer, B. H. Fancher; general secretary, John R. Mott). *Association Men*, the official magazine of the association, is published monthly. In the home field in 1916 there were 121 executive, traveling, and office secretaries and in the foreign field (Asia, Africa, Latin America, and Eastern Europe) 199 secretaries. The associations in North America numbered 2757, with a total membership of 689,023. Their 782 plants and buildings were valued at \$83,263,439, and the aggregate property at over \$106,000,000. The local associations, with 4353 secretaries and other paid officers, enrolled 152,160 men and boys in Bible classes and 82,358 different men in education courses; 477,731 members benefited by various physical privileges. The men for whom employment was found numbered 63,148. Total operating expenses for all the associations amounted to \$15,812,259. New buildings costing altogether more than \$6,000,000 were opened in 1916. Of 33 such buildings the most notable were at Chicago (Chicago Men's Hotel); Rochester, N. Y.; Springfield, Mass.; Greenwich, Conn.; Yonkers, N. Y.; Great Falls, Mont.; Racine, Wis. Toward more than 40 other new buildings \$8,900,000 had been pledged at the end of 1916. Buildings were completed or in course of construction in the foreign field at Havana, Cuba; in China at Canton, Foochow, Hongkong, and Hankow; in Japan at Yokohama and Tokyo; and in India at Calcutta.

The Thirty-ninth International Convention was held at Cleveland, Ohio, May 12-16, 1916. It was reported that for 29 months Y. M. C. A. work was maintained in encampments in Texas. With regard to the Y. M. C. A. activities for the benefit of men and boys engaged in the European war, it was stated that the greatest opportunities for the American organization had been found in the armies of France and Austria-Hungary. Much was done in the prison camps. During the first 17 months of the war \$300,000 was expended and it was expected that \$400,000 would be expended in 1916. Some 70 secretaries and other workers were employed in this field.

**YOUNGSTOWN STRIKE.** See STRIKES.

**YOUNG WOMEN'S CHRISTIAN ASSOCIATION.** The Young Women's Christian Associations in the United States are united through the agency of a National Board, which has its headquarters at 600 Lexington Avenue, New York City. Through this board the associations participate in the work of the World's Young Women's Christian Association. In addition to supervising local associations through 11 field committees, a staff of 128 headquarters and field secretaries promotes such specialized activities as: visiting and teaching immigrant women and girls; benefiting farm girls through county associations; helping young business women by vocational guidance, summer camps, etc.; establishing club houses for nurses and art students; offering opportunities to colored and Indian students; and interesting leisured women and college alumnae in philanthropic and religious work. Through a staff of 45 American secretaries abroad, the board extends its work to India, China, Japan, South America, and Turkey. In 1916 provision was made for 15 city, student, and county conferences and seven industrial or high school councils, in

which 6476 young women were given 10 days of rest, recreation, and religious instruction. At the end of 1916 the total number of local associations in the United States was 1004, consisting of 258 city associations, 727 student associations, and 19 county associations, with a total membership of 364,673. At the beginning of 1916 the number of employed officers was 1881. Bible study, mission study, educational and physical education classes were maintained. Employment bureaus found positions for 67,000 girls. The real property of the associations had a total value of \$12,444,879. Their expenditures for the year amounted to \$303,733.33, and the receipts of the National Board were \$337,942.12. The board publishes the *Association Monthly* and maintains a Training School for Y. W. C. A. workers. President of the board, Mrs. Robert E. Speer; general secretary, Miss Mabel Cratty.

**YUAN SHIH-KAI.** A Chinese statesman, first President of the Republic of China, died in Peking June 6, 1916. He was born in Honan Province in 1859, the son of a district governor. Educated for official position, he went into the army in 1882, serving as a secretary. His ability brought him to the attention of Li Hung Chang, then Grand Chancellor, who made him Chinese Resident at Seoul, Korea, in 1885. This office he held till the Chino-Japanese War in 1894, before which time he had gained for China the upper hand in the country. After serving a short time as judicial commissioner of Pechihli Province, he was placed in command of an army corps (1897). In 1898 Yuan, who by this time had become one of the principal advisers of the Emperor Kwang-sü, was involved in the Emperor's plot to gain a free hand for his reforms by placing the Empress Dowager, Tze Hsi, in confinement; but instead of carrying out his share in the plan, Yuan warned the Empress. She was thus enabled to execute a *coup* by which she was restored to power and Kwang-sü was virtually deposed.

As a reward for his services, Yuan was made junior vice-president of the Board of Works, and then Governor of Shantung. At the time of the Boxer Rebellion he avoided gaining the enmity of the Boxers, and at the same time effectively protected foreigners. As Acting Viceroy of Pechihli Province, from 1901, Yuan steadily gained in power, especially by a reorganization of the army. He was brought to Peking in 1907 to be grand councilor and president of the Chinese foreign office. Then came the death of the Empress Dowager and of Kwang-sü in 1908, within a day of each other, and upon the assumption of the regency by Prince Chun, Yuan was at once banished—sent off to “nurse a sore foot.” His enemies accused him of intrigues mysteriously connected with the death of the Emperor and Empress, and claimed that by being banished he escaped decapitation; but Prince Chun's enmity was natural, for he was a brother of Kwang-sü, and he could not forgive Yuan's defection in 1908. However, by 1911, an anti-Manchu rebellion had broken out and the Regent, who had already made several vain efforts to get Yuan back, sent for him in haste, appointing him Viceroy of Hupeh and Hunan and commander in chief of all the forces of the North. Prince Chun, as a sop to the revolutionists, made Yuan premier of a “responsible” cabinet. This did not sat-

isfy them, and the abdication of both the Regent and the boy Emperor, Hsuan-tung, was forced. In February, 1912, an imperial edict, which sounded the death knell of the Manchu dynasty, authorized Yuan to organize, in co-operation with the rebel leaders at Nanking, a republican form of government. The Emperor was merely to retain his title and religious functions and draw an annuity.

In December, 1911, Dr. Sun Yat-sen, a great liberal leader, who, with his followers, was working to overthrow the monarchy, had been elected by delegates assembled at Nanking provisional President, but although he was not hopeful that Yuan would give the country a really republican form of government, he resigned in favor of that leader in the following February. Yuan was then elected to the same office, and on Oct. 6, 1913, he was regularly chosen to the presidency by the Chinese Parliament, receiving a large majority over the other two candidates, Dr. Sun and Wu Ting-fang, who had been ambassador at Washington.

The opinion of Yuan's opponents, that his ambition would lead him to seek dictatorial power, seemed to be justified by his conduct in office. Risings in the South were severely dealt with, and Dr. Sun was forced to take refuge in Japan. After he had been at odds with the Parliament for some time, Yuan finally dismissed it (Jan. 10, 1914) and the next May he created an advisory council, or provisional congress, the members of which were all appointed by Yuan himself. He also abolished provincial assemblies and municipal councils, gradually gathering all the reins of government into his own hands. One of his remarkable acts was the restoration of Confucianism as the state religion.

In 1915, after Japan had exacted a number of concessions from China, there appeared to be a sentiment in some quarters that a return to the monarchy would be desirable. A citizens' convention was held, and it was announced that 15 out of 18 provinces and 1993 out of 2043 representatives favored the change. From subsequent developments, however, it would seem that this decision did not by any means indicate the real feeling of the people. However, in the summer of 1915, Yuan made it known that he intended to ascend the throne, stating that the country was in no condition to flourish under a republic.

Serious opposition at once developed. Not only did the rebellious Southern provinces revolt, but many leaders who had previously supported the President urged him not to take this step. From abroad the return to a monarchy was frowned upon by governments that had been most friendly to Yuan, and the high displeasure of Japan at the prospect was expressed in no uncertain terms. Unrest became general. The coronation, originally set for February, 1916, was postponed several times, and finally it was announced that China would remain a republic. Even the Vice-President, Li Yuan-hung (q.v.), had deserted his chief and joined the protestants; he now came back, and was ready to assume the presidency on the death of Yuan. His sympathy with the ideas of the Southern leaders and assured support from the Premier, promised well for his success in uniting the liberal factions. Whether Yuan Shih-kai died a natural death or was put out

of the way by his enemies may never be known. Several days before his death, which was said to be due to "stomach trouble" and nervous breakdown, it was reported that he had been poisoned, a report that was officially denied. Another version had it that he had committed suicide. Certain it is that several times attempts had been made on his life.

**YUKON.** A territory of the Dominion of Canada, east of Alaska and west of the Northwest Territories. Area, 207,076 square miles, of which 649 are water. Between 1901 and 1911 the population decreased 68.73 per cent, or from 27,219 to 8512 (6508 males, 2004 females). The capital is Dawson, which in 1901 had 9142 inhabitants and in 1911 3013. The territory is governed by a commissioner and a legislative council of 10 elected members. It is represented by one member in the Canadian House of Commons. The commissioner in 1916 was George Black; gold commissioner and crown timber and land agent, George P. Mackenzie.

**YUSUF IZZEDDIN.** Heir presumptive to the throne of Turkey, died Feb. 1, 1916. He was born in 1857, the son of Sultan Abd-ul-Aziz, and cousin of the prince who became Mohammed V, Sultan at the time of Yusuf's death. He became known for pro-British sympathies, and for his opposition to the Turkish leader and Minister of War, Enver Pasha. With this powerful pro-German Ottoman, Yusuf had once exchanged revolver shots. It was reported that he committed suicide, but to many it seemed probable that this act was forced upon him or that he was murdered.

**ZAMACOIS, MIGUEL.** See FRENCH LITERATURE, *Poetry*.

**ZANGWILL, ISRAEL.** See LITERATURE, ENGLISH AND AMERICAN, *Essays*, English.

**ZANZIBAR.** A British protectorate composed of the islands of Zanzibar (640 square miles), Pemba (390), and several smaller islands. The island of Zanzibar is separated from the mainland by a channel whose narrowest crossing is 22½ miles. A mixed population (Swahili) made up of representatives of all the east African tribes composes the majority of the inhabitants, who totaled at the 1910 census 197,199 (114,069 in Zanzibar, 83,130 in Pemba). The islands yield the bulk of the world's supply of cloves; other exports are coconuts, copra, chillies, etc. Imports 1914, £763,405; exports, £814,952; revenue, £234,701; expenditure, £213,091. Reigning Sultan, Seyyid Khalifa bin Harub; British Resident, Maj. F. B. Pearce.

**ZEODITU, OUIZERO.** Daughter of the late Emperor Menelik of Abyssinia, succeeded to the throne in September, 1916, after Menelik's grandson had been deposed. See ABYSSINIA.

**ZEPPELIN AIRSHIPS.** See AERONAUTICS; MILITARY PROGRESS.

**ZIMMERMANN, ALFRED F. M.** German statesman, became head of the German foreign office in succession to Gottlieb von Jagow, whose resignation was reported Nov. 22, 1916. Dr. Zimmermann, who had become known for books relating to international politics, had been an under secretary during the war in the foreign office.

**ZINC.** The zinc mining and zinc smelting industries experienced a year of prosperity in 1916. According to the best information available at the end of the year the recoverable zinc content of ore mined in the United States was

about 708,000 tons, compared with 605,915 tons in 1915. The largest district mined was made by the Joplin mines, which had an increase of over 40,000 tons. Montana made a notable gain and apparently took second place. Gains were made also in the Upper Mississippi Valley region. The Eastern States produced 148,000 tons, the Central States 274,000 tons, and the Western States 286,000 tons. There was much activity in the construction of retort zinc smelters in 1916, and considerable additions are planned for 1917. The number of retorts at the beginning of 1916 was 156,560. At the end of the year it was 213,840. The production of spelter from domestic ore was 553,000 short tons, worth about \$150,000,000, and from foreign ore 105,000 tons. The total of 658,000 tons was worth \$180,000,000, compared with a total of 489,519 tons in 1915, valued at \$121,400,000. Illinois showed the largest production of spelter, followed by Kansas and Oklahoma.

**IMPORTS AND EXPORTS.** Imports of spelter sheets made from domestic ore in 1916 were about 167,000 short tons, valued at \$52,200,000, compared with 118,603 tons, valued at \$29,537,880 in 1915. Exports of spelter made from foreign ore were estimated at 43,500 tons, valued at \$7,500,000, compared with 13,730 tons in 1915. The exports of zinc manufacturers fell off to \$573,000 in 1916 from \$2,173,089 in 1915. The imports of spelter are estimated at 600 short tons valued at about \$100,000, compared with 104 tons in 1915. The imports of zinc ore in 1916 were approximately 360,000 short tons worth about \$11,800,000, compared with 158,852 tons in 1915. See also METALLURGY.

**ZOOLOGY.** In the United States, the year has produced about the usual amount of zoological research, both in pure science and in various economic lines; the latter mainly in connection with Federal or State agricultural research. The completion of permanent buildings for the Marine Biological Laboratory at Woods Hole, Mass., and for the Scripps Institution at La Jolla, Cal., has provided the country with splendidly equipped research laboratories, open at all seasons of the year. In Europe the war has of course interfered seriously with productive scholarship. So far as Germany is concerned, little or no account of the research work has reached the United States. How much of this lack is due to non-productivity and how much to the refusal of the British censor to allow German publications to pass, it is not possible to state. The Naples Zoological Station has been taken over by the Italian government, which has placed it under the control of a royal commission, with Prof. F. Sav. Monticelli of the University of Naples as president. This commission announced that facilities would be offered as before for the carrying on of research. The *Zoologischer Jahresbericht*, formerly published by this station, has been discontinued, the last volume being for the year 1912. The *Bibliographica Zoologica*, which has been edited by an international committee since 1896, was until 1912 published with the *Zoologischer Anzeiger*, though since 1909 the printing was done in Zurich. The director announced in December, 1916, that in spite of difficulties arising from the war, the volumes are being published, vol.

xxx being then in the press. Expenses of publication have been met by private subscriptions and by aid from the Swiss government.

The International Commission on Zoological Nomenclature ruled that *Holothuria* and *Physalia* shall be used with the customary application, a suspension of ordinary priority rules being desirable in this case. This commission, in *Smithsonian Institution Publications No. 2409*, gave a list of 102 officially recognized names of birds.

Some years ago the opinion was expressed that aquatic animals might extract nutriment from materials in solution in the water passing through their bodies, but it seemed doubtful if enough could be obtained in this way. As bearing on this question, Hecht calculated the amount of water passing through the branchial chamber of an ascidian, *Ascidia atra*, and found that a moderate sized individual would pass as much as 173 litres per day. He did not attempt to estimate the amount of nutriment it might have obtained from this water. Churchill, working on fresh water mussels, got evidence that fats in the water would be absorbed directly by the mantle, albumen by the outer body wall, and starch by the gills. These results make it reasonable to conclude that when living in ordinary river water, with much organic matter in solution, an appreciable amount of the nutriment may be obtained by absorption.

**HEREDITY.** Morgan and his students continued their analysis of the hereditary processes in *Drosophila*, the fruit fly. As has been noted in earlier YEAB BOOKS, they locate the carriers of heredity in the chromosomes, and have gone so far as to plot on individual chromosomes the precise position occupied by different determiners. Of importance is the behavior of the "X" chromosome, the distribution in heredity of certain sex-linked characters following with great accuracy the distribution of this chromosome. Bridges has discovered, in what appear at first sight to be exceptions to the usual rule in such cases, what seems to be in reality confirmation of the accuracy of the original hypothesis. In a crossing where the male has a dominant sex-linked character which is not present in the female the assumption is made that this dominant character is carried by an X chromosome present in the male. The female has two X chromosomes, while the male has but one. If we represent by an underscored X the carrier of the dominant character, the formula of the male cell would be  $\underline{X}Y$ , and of the female  $XX$ . (The Y in the male refers to a chromosome which is associated with the X, but has no relation to the sex-linked character.) Thus the sex cells of the male after maturation would contain either an  $\underline{X}$  or a Y, while each mature egg would contain an X. An X egg fertilized with an  $\underline{X}$  spermatozoon would have the formula  $\underline{X}X$  and would be a female showing the dominant character. An X egg fertilized by a Y spermatozoon would have the formula XY and would be a male, but without the sex-linked character. Thus the daughters are like the father, and the sons like the mother.

In the majority of breeding experiments on *Drosophila*, the results are in agreement with the assumptions thus far made, and hence tend to substantiate the hypothesis. In some cases, however, the daughters resemble the mother and the sons resemble the father, results which

seem opposed to these conclusions. Bridges supposes, however, that in these cases the exceptional conditions have arisen in some individuals through the failure of the X chromosomes to separate in maturation, a condition which he calls non-disjunction. Thus an egg after maturation might contain both X's and have the formula XX, or it may have thrown both out with the polar body, and the formula O. Fertilized with the two kinds of spermatozoa the results would be as follows:

- XX egg + X spermatozoon gives XXX a female.  
 XX egg + Y spermatozoon gives XXY a female like the mother.  
 O egg + X spermatozoon gives XO a male like the father.  
 O egg + Y spermatozoon gives OY.

Bridges actually obtained individuals corresponding to the second and third of these groups, though the male was sterile. The female was fertile and further breeding with her, in crossings calculated to analyze the chromosomal characters, indicated that they agreed entirely with the hypothesis. The apparent exceptions, therefore, really add strength to the theory. Confirmatory evidence was obtained by a microscopic examination of the chromosomes of aberrant females where peculiar arrangements of these chromosomes could be observed.

Since males of the formula XO are sterile while the normal fertile male has the formula XY, it appeared to Bridges that the Y has some definite function, and is not merely "a gear wheel in the mechanism of synapsis and reduction."

Bateson, the leading English student of genetics, has in his various writings (see *YEAR BOOK* for 1907, article *BIOLOGY*) been very skeptical of the theory that hereditary characters are as intimately associated with the chromosomes as has been maintained. In a review of "The Mechanism of Mendelian Heredity" by Morgan and others (see *YEAR BOOK* for 1915, article *ZOOLOGY*) he admits that this work of Morgan and his associates has strengthened the theory, but still finds it difficult to believe that the chromosomes can be sufficiently complex in structure to warrant its acceptance. Since the number of independently variable characters possessed by any individual is much in excess of the number of chromosomes in it, this theory must assume a complex grouping of characters along the chromosome, and Bateson did not believe that the facts in our possession warrant this assumption.

Davenport, as a result of the study of family histories, stated that nomadism, or a tendency to wander, and violent temper are inherited in accordance with Mendel's law. A "violent temper" is really the presence of a feeble inhibitory power, and it is this feeble inhibition which is inherited. A theoretical calculation showed that in mating controlled with uncontrolled 50 per cent of the offspring resemble one parent, and 50 per cent the other. Field workers collected data showing that the actual proportions were 106 to 113, a result quite in agreement with the expectation. In an earlier paper Davenport stated that congenital cataract is a dominant character and based his eugenic advice on that position. The subject was reinvestigated by Jones and Mason, who stated that

this character is a recessive, and that eugenic advice based on Davenport's conclusions is apt to lead to unfortunate consequences.

Since the publication in 1877, of Dugdale's book on the "Jukes" family, this has been a stock illustration of the persistence of criminality or mental deficiency in human heredity. Estabrook published through the Carnegie Institution of Washington, a study of the condition of the family in 1915. He was able to secure data concerning 1258 members who were living in that year. One-half of these are feeble-minded, and not capable of responding normally to the demands of society, while the other half become socially adequate or inadequate, depending on the environment. He concluded that all of the criminal Jukes are feeble-minded, and to eliminate this criminality we must eliminate the feeble-mindedness. Out of 600 epileptic or feeble-minded Jukes only 3 are in custody, but by proper segregation of the 600 he thought the mental deficiencies could be eliminated in 50 years. It might thus be possible to eliminate the feeble-minded and to improve the others who are capable of responding to normal conditions by improving their environment. Davenport, in discussing this paper, expressed the opinion that to scatter individuals among a good environment might result in starting so many new foci of socially undesirable communities.

Davenport has stated that the combs of fowls are determined as to form by separate determinants acting either separately or in combination, and similar results are reported by Bateson. Stephenson was unable to find any special determiners, but thinks that in the single and the V-shaped comb as well as in the Y resulting from their crossing, the comb arises as the last step in a series of differentiations which have given rise to the whole head structure. The form of the comb is then due to the interactions of forces which have given rise to all of the other parts of the head, and is not in any way due to determinants relating particularly to it.

Castle and his students have continued their analysis of the coat colors of guinea pigs and rabbits. From a study of the native guinea pigs from Peru, which Castle considers the ancestral form, he concluded that varieties have arisen through loss of variations, and thus black, brown, yellow, and white forms have appeared as a result of the loss of characters present in the wild variety. Castle thought that as a result of the long period that these have been bred by the Peruvians they have undergone more modifications than any other domesticated mammal.

Osborn thought that baldness is an hereditary condition, and not due to the wearing of tight hats, and he gave photographs showing that the bald area is above the line of hat pressure and so cannot be due to this. He thought that the evidence indicated that baldness is a sex-linked character, becoming apparent in the male when simplex, but showing in the female only when duplex. Like other sex-linked characters, it may be transmitted through the female, even if not evident in her.

It has been questioned whether in breeding for high egg production in fowls there is not an accompanying decrease in the stamina of the race. Dunnicliff, working in New South Wales, states that there is no reason to fear this result, and that while physical degeneration may

appear in selected stock, this is not the result of selection for fecundity.

A German eugenic society for the improvement of the race has been formed to counteract the eugenetic features of the war, and a campaign has been started, especially among the soldiers in the field, relating to such subjects as alcoholism, venereal diseases, and the desirability of a high birth rate.

Whether inheritance is always, as maintained by the Mendelians, alternative, or whether it may sometimes be a blending, is still an unsettled question. Castle thinks that in his mammals measurements and weights indicate a definite blending.

Stockard and Papanicolaou reported on a continuation of earlier experiments on the effects of alcohol on the animal body, and the inherited effect of the effects of alcohol. While the treated animals showed only a limited effect of the treatment, and were fairly healthy, their offspring displayed pathological conditions, and these were more marked in the grandchildren and great-grandchildren of the treated animals than in the animals themselves. This is not claimed as a demonstration of the transmission of an acquired character in the usual meaning of that term, but indicates a direct poisoning of the germ cells, which is transmitted to succeeding generations. Male offspring of alcoholized females are more affected than female, and conversely female offspring of alcoholized males are more affected than the male. This is in accordance with the "crisscross" inheritance of sex-linked characters (see above), and is to be explained by the peculiar behavior of the chromosomes in fertilization. Pearl followed Stockard's technique in administering alcohol and ether to domestic fowls, but in these animals got no indication of a germinal poisoning. These results he regarded as in no way contradictory to those of Stockard and Papanicolaou, but indicate that the fowl has a greater degree of resistance to this particular treatment than the guinea pig. See also EUGENICS.

**CYTOLOGY.** The belief that the chromosomes have some relation to the transmission of hereditary qualities has led to much research on these structures. Guyer, in the domestic fowl, found a chromosome whose appearance and behavior agree with those of the X chromosome in other animals, and the assumption that it has the functions usually assigned to an X chromosome seems to be borne out by the observed results of breeding. Apparently the male fowl is homozygous, and the female heterozygous for sex-linked characters.

Wodasdalek investigated the spermatogenesis of the mule, in an attempt at determining the reason for its sterility. The mule has 51 chromosomes, including an accessory, which Wodasdalek thought was derived from the horse. The horse has 37 chromosomes, indicating that the ass must have 65. The two sets of chromosomes in the body cells apparently function in a perfectly normal fashion, for the mule is long lived and vigorous in every way. When the chromosomes unite in the pseudo-reduction stage, abnormal forms appear, and the author was unable to find a single normal primary spermatocyte. As a result of these abnormalities no normal spermatozoa are produced, and as a consequence the animal is sterile.

Hoy studied the somatic chromosomes of the squash beetle, *Anasa*, to determine whether the number remains constant, and whether there is any ground for the belief that they are permanent cell organs. So far as this animal is concerned he thought that they are permanent and maintain a constant number and type. A study of the literature shows that this result has not been reached by all workers, and indeed there are contradictions in published observations, so that renewed study of this subject is desirable. This is especially so since the observed inconsistency in some forms has seemed to some to overthrow the whole chromosomal theory of inheritance. Similar work was done by Browne on the chromosomes of six species of *Notonecta* (the water boatman), where she found that the different species show constant differences from each other in chromosomal characters. Browne concluded that the results strengthened the belief that the chromosomes are important in determining the characters of the cells, though she was unable to determine the precise relation between particular chromosomes and particular bodily characters.

Cowdry thought that the focussing of so much attention on the chromosomes by cytologists has led to an unfortunate neglect of other cell structures, especially of the chondriosomes, which seem to have great importance in cell physiology, and may possibly play a part in heredity transmission. Wilson has studied these chondriosomes in scorpions, and finds that while some have a definite distribution like the chromosomes, others have not. Thus the question as to whether they carry hereditary qualities remains open.

Minchin discussed the evolution of the cell, stating his belief that the ordinary concept of the cell as given in text books, does not apply to the Protista, for among these we get all gradations from cases where the word cell can apply only by stretching its meaning, to cases where the organism is quite similar to the Metazoon cell. Minchin believed that the chromatin of the cell has a physiological predominance especially in constructive metabolism, specific individuation, and potential biological immortality. Hence the chromatin elements are the primary and essential constituents of living organisms. Thus we must conclude that the primitive organisms were biococci; free living organisms capable of building up their bodies by synthesis of simple chemical compounds. The nearest approach to these at the present day are the Chlamydozoa, which thus far have been seen to occur only as pathogenic parasites. From these primitive forms two types developed: 1. Vegetative type, where the body became surrounded by a rigid envelope and thus the bacterial type of organism arose, viz. a minute globule of chromatin surrounded by a firm envelope; 2. Around these chromatin particles appeared an enveloping matrix of protoplasm, which has amoeboid movements, and is able to form internal vacuoles. It is able to flow around food particles and digest them in the vacuoles, by the aid of enzymes secreted by the central particle (biococci). Thus is reached a stage which he calls "pseudomonera" because it resembles Haeckel's idea of a monera. The next stage in evolution was the organization of the chromatin grains into a nucleus as a definite cell organ, and this formed the starting

point for an infinite series of complications and elaborations in many directions.

**SEX DETERMINATION.** Whitney has stated (see YEAR BOOK for 1915) that feeding rotifers with a green alga, *Chlamydomonas*, resulted in an increase in the number of male producing females. Shull repeated these experiments and found that an increase of oxygen in the water has the same effect, and suggested that Whitney's results were in part due to the oxygen set free by the *Chlamydomonas* in photosynthesis. Moro, working also on rotifers, found that the addition of  $\text{FeCl}_3$  increased the number of male producers and also stimulated the animals to a more rapid production of eggs. Similar results followed the use of  $\text{HgCl}_2$ . Moro's general conclusion was that when conditions of diet and temperature are constant and uniform only female producers appear, but that if these conditions are suddenly modified male producers appear. Under the auspices of the Carnegie Institution of Washington, Riddle has continued researches begun on pigeons by the late Professor Whitman, and secured results which he thought explain the determination of sex in these animals. In a pure species of pigeons, the first of the two eggs in a clutch hatches into a male, while the second hatches into a female, the first egg also being smaller than the second.

In crossings of different families, the offspring are always males. Riddle stated that if animals of different genera are crossed, the offspring in the spring will be all males, and he implies that this would continue during the breeding season. If, however, the eggs be removed as fast as laid, and the female thus be kept at laying (is "overworked"), the offspring of later eggs will be female. Riddle thought this to be a real reversal of sex, and that it could not have either a selective fertilization or a chromosomal explanation. His interpretation was that in the male egg there is greater oxidizing capacity and greater metabolic activity than in the female, and that the overworking of the female brings about a change in eggs which otherwise would have developed into males so that they become female. The difference between the sexes then rests on modifiable metabolic levels of the germs. Males arise at higher, females at a lower, metabolic level and chromosomal conditions have nothing to do with sex determination.

**EVOLUTION.** Davenport adopted, in a modified form, Bateson's theory that evolution has progressed mainly through a dropping out of characters from a primitively very complex substance. He thought that while the organism as a whole is much more complex than the egg, the egg is much more complex than any single cell in the organism. Thus evolution is regarded as a series of internal changes chiefly independent of external conditions, and proceeding chiefly by a splitting up and loss of genes from a primitively complex molecular condition of the germ plasma. Davenport thought that this idea receives support from ontogeny, paleontology, and experimental breeding, and from analogy with studies on "rare earths" in inorganic compounds.

Observations on the problem of protective coloration were made by Beebe in Brazil. One very gaudy spider, *Acrosomo spinosa*, when disturbed, would slip under a leaf or feign death, thus

making no use of its "warning" coloration. Another form, *Epeira andas*, had what would be called a protective coloration, and lived more nearly up to the traditional behavior. Punnett thought that the so-called protective coloration of insects could not have arisen through natural selection because the chances are so much against any single variation having been preserved in this way, though chance variations might be preserved by selection after they have once arisen. Punnett suggests that in insects, as in guinea pigs and rabbits, there may be a limited series of factors producing color, and hence similarities arise because of similar combinations of these factors.

**SELECTION.** Jennings's earlier work on *Paramecium* had indicated that within the limits of a pure line, selection of extremes has no effect in raising or lowering the average of the descendants. This work was repeated by Ackert, who reached exactly similar conclusions. No differences could be observed between the descendants of long and of short *Paramecium*. Jennings, working on the results of selection in *Distugia* got results at variance with those thus far reached in the study of *Paramecium*. *Distugia* forms a shell having very definite markings, and selection on the basis of these markings showed that within a single family there might be produced extremes of variations in excess of anything which occurred originally. There is a definite inheritance of parental diversities, and a considerable degree of correlation between parent and offspring, though not as great as between the members of a population. These results were reached by a long series of measurements and computations, and are important as bearing on the question of "pure line" inheritance.

**VITALISM.** In some quarters there seemed to be a return to a vitalist explanation. Thus Neal argued for a vitalist position in explaining individuality in organisms, and Haldane maintained that "the attempt to analyze living organisms into physical and chemical mechanism is probably the most colossal failure in the whole history of modern science." Haldane cited cases like the regulation of breathing, the excretion of wastes and nutrition in general, where there is adaptation to unusual conditions as indicating that something more than physics and chemistry is at work in the body.

**PROTOZOA.** Schaeffer, on the basis of structure and reactions of *Amoeba*, decided that under the specific name *proteus* we have really several species, and described as new species two forms, retaining as *Amoeba proteus* the one corresponding to Leidy's description. *A. proteus* has longitudinal ridges and grooves on the pseudopodia. *A. dubia*, a new species, is distinguished from *A. discoides*, another new species, by the possession of an ovoid and a discoid nucleus respectively. Experiments on these forms showed that they will react to food materials, as has been earlier described, but also that they react in such a way as to send pseudopodia towards insoluble substances in the water, where, therefore, no chemical attraction could be in existence. Schaeffer noted that these reactions were as if the *Amoebae* could see the object at a distance, though he is careful not to make such an interpretation.

Woodruff and Erdmann, who had previously worked on nuclear reorganization in *Paramecium*

*cium aurelia* (see YEAR BOOK for 1914), continued these experiments on *P. caudatum* and found exactly similar conditions to those obtaining in *aurelia*. Their conclusion was that under favorable environmental conditions conjugation is not essential for the continuation of the life of the race.

An important publication of the year was the completion of *British Fresh Water Rhizopoda and Heliozoa* by Cash and Wailes.

**ARTHROPODS.** Pearse found that fiddler crabs use their large claws both for fighting and for signaling the females. In going into their burrows they usually close the opening with a bit of dirt, the method varying with the hardness of the available material.

Hegner, experimenting on the eggs of potato beetles, concluded that they are laid on the under side of leaves for protection from sunlight rather than from enemies. In beetle eggs his experiments indicated that the main features of development which determine the phylum, the class, and order, are determined by the cytoplasm, the chromosomes determining the minor characteristics. Gynandromorphic insects, which are partly male and partly female, were explained some years ago by Boveri as due to a peculiar fertilization of the egg. He assumed that the egg divided before the sperm had fused with the egg nucleus, and in consequence one cell contained only female nuclear matter, while the other contained both male and female. An alternative explanation offered by Morgan was that more than one sperm had entered the egg, and that some cells contain only sperm nuclei, while others contain both. In the former case all male parts would be maternal and all female parts paternal, while the reverse would hold in the second interpretation. An examination by Morgan of the "engster" gynandromorphs showed that they can be explained on Boveri's original hypothesis.

**PLATYHELMINTHES.** Ball described the development of *Paravortex gemellipara*, a small rhabdocoele turbellarian living as a commensal in the mantle cavity of mussels. Here, as in other capsule forming rhabdocoeles, two or more embryos arise in each capsule by the enclosure of two or more eggs and about 100 yolk cells in the shell. The chondriosomal mass (see *Cytology* section) was traced from the young oocyte to its final resting place in the primary entoderm cells. It probably has to do with the digestion of the vitelline yolk by these cells. What seems not to have been recognized in other Turbellaria occurs here, in the appearance of

three primary germ layers, mesectoderm, primary entoderm, and secondary entoderm. The eye appears very early in ontogeny, which may be explained by saying that since it is composed of only one cell it is early separated from others, and differentiation is easy.

**FISH.** Much excitement was caused in the summer of 1916, by the attacks of fish on bathers along the New Jersey coast. No animal was definitely identified as the aggressor, but it probably was a shark, though in spite of its reputation, the shark very rarely attacks human beings. One of the few species that do thus attack is the white shark, *Carcharodon carcharias*, and the capture of one of these in this vicinity led to the belief that it might have been the individual involved. Schmidt found that the European eel, which is distinct from both the American and Japanese forms, appears in several races, but that these differ in number of vertebrae much less than do the blennies. He suggested that this might be due to the fact that eels have a common breeding place, while blennies breed in restricted localities; thus each variety varies along its own line without chance of interbreeding.

**AMPHIBIA.** It was discovered that the alligator salamander *Autodas lugubris*, of the Pacific Coast region, lives in holes in hollow trees often at considerable heights, using its toes and prehensile tail as climbing organs. The larval stages are passed through in the egg.

**AVES.** Beebe, in British Guinea, describes the Hoatzin as very limited in its movements, so that individuals can always be found in certain definite places. The nests, which are sometimes solid and sometimes very loosely constructed, are always built over water, at a height of from 4 to 40 or 50 feet. Young birds, a week old, if disturbed would climb to the edge of the nest, and dive overboard into the water without any reference to the height of the nest from the water. They gradually make their way back, using the wings as climbing organs. Beebe commented on the reptilian appearance of the young birds with their separate fingers and long neck, and this resemblance is heightened by the diving habit. In 1909 the Duke of Bedford gave six yaks to the Canadian government. In 1916 they had increased to 14. It was reported that there is reasonable hope that they may form the nucleus of a breed of hardy cattle for the North. See also ENTOMOLOGY; FISH AND FISHERIES; ORNITHOLOGY.

**ZULULAND.** See SOUTH AFRICA, UNION OF. Zululand is administered under Natal.
